NO TIME TO CHANGE

Modern war has two distinct phases. One is military. The other is economic. And the deciding weapon in either case will be the belligerent powers' natural resources. It takes coal to keep factory furnaces glowing. It takes metal of all kinds in an incredible quantity to build the weapons and the machines which produce the weapons. It takes abundant electric power to keep industries producing on a wartime basis. And the extent of a nation's natural resources determines its position as a trading power—and so determines to a very large extent what its diplomatic influence shall be.

The United States is singularly blessed by nature with the principal natural resources—metals, petroleum, coal, water power. Second, and equally important, under the private enterprize system we have developed these natural resources to an extent unrivaled anywhere else on earth. The American tradition of private initiative has borne magnificent fruits for all the people. And it is this tradition which must be maintained if this country is to achieve its full strength both as an arsenal of democracy, and as a free nation where every man may succeed and prosper and serve to the very limit of his abilities, ambitions and energies.

There are those who would now use "national defense" as an excuse to have the government develop our natural resources—who would, in a word, socialize them. We have examples to indicate what would follow if that happened. Russia is rich in natural resources. Yet the Russian standard of living, after more than 20 years of socialism, remains at rock-bottom, and Russian production is notoriously low, wasteful and inefficient. Is this the kind of political philosophy the American people wish to follow?

The industries which turn our natural resources to productive use will cooperate the limit with government now and in the future. They will show the world that a free America, working under a free enterprise system, is stronger than dictatorship, and that free men will out-produce slaves. This is no time to change a system which has met and conquered every menace of the past, and which today is gathering all of its vast resources to meet the menace of the present.

ONE TAX BILL

The other day a large Western light and power utility added up its 1940 tax bill. The compilation shows vividly what the electric industry means to the United States.

This one company's total bill for taxes was something over $22,531,000, and was by far its largest item of expense. This amounted to an increase of almost $4,500,000 over its 1939 tax bill. About three-fourths of the increase represented a jump in Federal income taxes.

Total Federal taxes came to a little more than $10,000,000. State taxes added up to more than $2,500,000. And local taxes — paid to the 47 counties and 153 municipalities in which the company operates — exceeded $9,910,000. The largest city served by the company drew over $1,845,000.

What is true in this case is true in the 48 states where such companies pay annually some $400,000,000 in taxes. The private power industry is one of the biggest and most dependable taxpayers. It will bear a very important share of defense tax increases now needed.

Government-owned power projects—socialized power—by contrast, pay little or nothing in taxes. Instead, being subsidized, they consume tax money. In this time of unprecedented taxation we need private industries which contribute sums to the government, instead of socialized, politically operated industry which is an insatiable tax eater.

KNOW YOUR BANK

What Is The Future of Banking In America?

From the days of George Washington, banking has had a leading role in developing America. Today it is meeting and fulfilling its great responsibility of financing the defense program, couragously and adequately. There is every reason to believe that banking, in its future, will continue as a vital force in building a greater and better America.

Citizens State Bank of Vaughn,

Carrizozo, N. M.

Member Federal Deposit Insurance Corporation

Seventy-five Attend Extension Hay School

Seventy-five farmers attended the Extension Hay School, which was held on June 17th at the farm of George A. Titsworth, near Hondo.

The program consisted of demonstrations of modern machinery given by the Smith Machinery Co., J. I. Case Co., Mitheell Implement Co, Roswell Tractor and Implement Co. of Roswell; discussion on the use of fertilizer, on factors influencing the grade of hay, and the utilization of hay through livestock were given by Mr. George F. Ellis, Extension Animal Husbanbman, Clayton Wayne, Extension Agronomist, and Mr. Glen Staten, Associate Agronomist of the State College Experimental Station.

A loudspeaker and music was furnished by the International Harvester Co. of Sweet Water, Texas The Women of the Baptist Church of Tinnie served lunch to the delegation.

Carl P. Radcliff
County Extension Agent

Mrs. J. B. French was a Carrizozo visitor this week. She intends to spend the greater part of the summer at her cabin in the mountains.

NOTICE OF HEARING OF FINAL REPORT AND ACCOUNT

In the Probate Court of Lincoln County

State of New Mexico

In the Matter of the Last Will and Testament of Thomas E. Welch Deceased. } No. 291

To Lucile N. Welch Davis, Formerly Lucile N. Welch, White Oaks, New Mexico, and to all unknown heirs of the said decedent, and all unknown persons claiming any lien upon, or right, title, or interest, in or to, the estate of the said decedent, and to whom it may concern:

You, and each of you are hereby notified, and notice is hereby given, that Lucile N. Welch Davis Formerly Lucile N. Welch, Executrix of The Last Will and Testament of Thomas E. Welch deceased, has filed in the above entitled Court her final report and account as such Executrix, and the Court has appointed Monday, the 28 day of July, 1941 at the hour of 10 o'clock A. M., as the hour and day for hearing of objections, if any there be, to the approval and settlement of said final report and account and the discharge of the said Lucile N. Welch Davis as such Executrix, and at the hour on the day named, the Probate Court will proceed to determine the heirship of said decedent, the ownership of his said estate and the interest of each respective claimant thereto and therein and the persons entitled to the distribution thereof.

The name and post office address of the attorney for the Executrix is John E. Hall, Carrizozo, New Mexico.

Witness the honorable Marcial C. St. John, Judge of the said Court, and the seal thereof, this 12 day of June 1941.

Felix Ramey,
Clerk.

J13-July 4.

James - Hines

Lieut. Carol Cecil Hines and Miss Ruth James were united in marriage last Sunday morning, June 8 at 11:30 in the Episcopal Chapel in Roswell. An Interesting item connected with the wedding was that Lt. Hines had been baptized and confirmed in this same chapel.

Lt. Hines, who is the eldest son of Mr. and Mrs. A. C. Hines of Carrizozo was born and reared here. After his graduation from the local high school he was graduated from N. M. M. I in Roswell.

For the past two or three years he has been commanding officer of the Glorietta CCC Camp.

The bride is very attractive and highly accomplished. She has been a successful teacher in the Fort Sumner school for some time.

Lt. Hines and bride were guests of his parents, Mr. and Mrs, A. C. Hines here last Sunday after their marriage, then left Monday for a short wedding journey. They will make their home at Glorietta.

The bride was attended by her sister, from Las Cruces. Lt. Hines was attended by Lt. Morrison.

INCREASED AMOUNT OF DAIRY PRODUCTS NEEDED

The Secretary of Agriculture in urging dairy farmers to increase milk poduction still further in certain areas, says E. E. Anderson of the New Mexico Extension Service. A few weeks ago the Secretary announced the need for an increase in total milk production by six to eight percent to meet our domestic requirements for dairy products to furnish the cheese and evaporated milk required by Great Britain and her allies. The statements issued by Secretary Wickard in regard to the increased needs are as follows:

"Recent information indicates that, while there appears to have been a satisfactory increase in total milk production, the current rate of producing milk for cheese and for evaporated milk is considerably below that necessary to furnish sufficient quantities of these two products for Lend-Lease purchases and for our own people as well.

"Our ability to supply these quantities will depend a good deal upon increasing the supply of milk in those areas surrounding cheese and evaporated milk plants.

"The total production of American Cheddar cheese in the last 12 months was about 605 million pounds and the total production of evaporated milk was 58 million cases. On the basis of anticipated requirements, cheese production should be increased by about one-third and evaporated milk production by about one-fourth. It now appears that there will be an outlet at favorable prices for all the cheese and evaporated milk that can be produced during the next 12 months. The Department in recent months has purchased or contracted to purchase 26 million pounds of American Cheddar cheese and 1 and three-quarter million cases of evaporated milk. The purchase program will be continued."

NAUTICAL NOTES

THE TWO-FOLD NATURE OF DUTY IN THE NAVY: When a man enlists in the Navy, no matter what rating, the nature of his duty is two-fold. The duties are (1) his military duties and (2) the special duties of the rating in which he enlists.

No matter what his length of service may be or what his rating is, every recruit, every enlisted man has certain duties of a military nature quite apart from the duties of his rating. These military duties are a part of the military service to which he belongs, and the fact of these military duties cannot be too strongly impressed upon each man. Even though the duties of his rating may be such as to reduce the amount of drill—nevertheless, the military side of the profession is always present and its responsibilities are always in evidence. However, expect a fireman or a machinist's mate, a yeoman or a cook, he must realize that when he enlists in the Navy, skill in his rating constitutes only part of his duty. In addition to showing that he is competent to perform the duties of his particular rating, he must place himself under military laws and regulations which are quite different from the laws which govern him in civil life. And it is the neglect of the military half of a man's duties that causes a very large percentage of the trouble he may experience in the Navy. A number of men fail to realize just what this military side of life in the Navy involves. In a general way they know that they must be obedient and respectful, but they do not seem to understand the real importance of being so. They do not realize that failure to be respectful and obedient will injure their records and ruin their chance for promotion.

HOUSE CLEANING AND FIRE

Mrs. America is now turning her expert hand to the job of spring house cleaning, and woe betide all interference! There she stands — a towel guarding her coiffure, with a broom and a scrubbing brush—mistress of all she surveys.

There is panic amid the cobwebs, the dust particles shudder despairingly. Wise husbands stay downtown for dinner. Smart children absent themselves.

But the National Board of Fire Underwriters dares to raise a voice. "Mrs. America," it says, "there were 1,500 fires a day in this country in 1940. Most of them were in homes. They cost the lives of thousands of loved ones, the loss of cherished possessions, of hundreds of millions of dollars. Can't we do better than that from now on?"

And so the National Board, which observed its 75th anniversary this year, tries to show Mrs. America the best way to fight fire is before it starts. House-clean the fire hazards, it advises. Beware of rubbish in the attic and basement. Never clean with gasoline—it's liquid dynamite. Discard non-metal waste baskets and ash containers. Use only approved electrical devices and equipment. Put all oil or paint-soaked rags and clothing in the furnace, lest spontaneous ignition break out.

"Fire-proof the American home" is a good slogan for house cleaning time. And Mr. America, along with his Mrs., has a dividend-paying job laid out for him here.

Lincoln Forest Notes

In talking to people through the Forest on the subject of fire, one of the questions asked most frequently is "Aren't most fires started by tourists and people who are not familiar with fire?".

I recently made a study of the fires on the White Mountain District for the years 1936-1940 inclusive and found that the distribution was as follows:

Lightning 32 per cent
Local People 37 per cent
Outsiders 31 per cent

As it is difficult to determine with any degree of accuracy on some of the fires just who did start them, these three figures show that the three causes are about equal. The larger fires during that time were all man-caused and the greater number caused by local people.

The above figures point out that carelessness rather than lack of knowledge is responsible for a lot of fires.

Do your part in Forest Defense. Be a careful Forest User.

G. J. Gray
Forest Ranger

Mr. and Mrs. J. M. Beck and children have gone to Colorado to visit relatives at Denver, and later they will locate at another point in that state.

S. P. Helps National Defense

The U. S. Maritime Commission has directed the Southern Pacific Company to turn over its 10 remaining ocean freighters to the government for national defense purpoeses and with the transfer, the oldest lines under the American flag will cease to operate.

Confirming reports that the commission would take over the vessels, now in service between the Gulf and the Atlantic seaboard, President A. D. McDonald of Southern Pacific has announced that delivery of the ships will probably be completed by the end of July.

The Southern Pacfic Steamship Line is commonly known as the Morgan Line, founded in 1835. It has been operated without interruption for more than a century except for a brief period during the Civil War. S. P. purchased the Morgan Line in 1885.

Earlier this year, President Mc Donald pointed out, the S. S. Dixie, flagship of the line, was sold to the U. S. Navy, and the company was obliged to discontinue freight and passenger service between New York and New Orleans, Since then the remaining vessels have carried freight in two-way service from New York and Baltimore, to Houston and Galveston.

Benjamin Wesley Rentfrow

Funeral services were held Tuesday afternoon for Mr. Benjamin Wesley Rentfrow, prominent and well known stockman of this county. The Rev. L.D. Cochran, pastor of the Baptist church conducted the services at the local church.

Mr. Rentfrow was born in the state of Texas on November 10th 1860, being at the time of his death 80 years of age.

He was married in the state of Texas, and three children were born to the union, all of whom survive.

Mr. Rentfrow had been ill at the Turner hospital for several weeks, and with little hope for his restoration, or even improvement, due to his advanced years.

He had retired from active business several years ago. A man of high ideals and exemplary character he was universally admired and respected by everyone, as was shown by the large crowd in attendance at his funeral.

Besides his son, Mr. Doyle Rentfrow, prominent stockman of Carrizozo, he is survived by two daughters, Miss Era Rentfrow of the State College, Las Cruces, and Mrs. Shaler Ladd of Washington, D.C.

Mrs. Margie Clouse and Mrs. Nellie Branum are on a visit to El Paso and Las Vegas. Mrs. Clouse is on vacation from her duties at the Lincoln County Ageney.

Melton Evans is employed with the Fish and Wild life service near Clarton, N. M.

Mrs. J. M. Melton and daughter Margie of Clayton. N Mex., are visiting Mrs. May Phillips and daughers.

Mrs. W. C. Perry of Cuervo, Texas and Mrs. J. F. Gossett of San Antonio, Texas are visiting Mrs. Perry's mother, Mrs. May Phillips and her sister, Mrs. Bess Evans.

Mr. Lell St. John of Albuquerque, was a Carrizozo visitor Tuesday and Wednesday of this week.

WHO'S NEWS THIS WEEK

By LEMUEL F. PARTON
(Consolidated Features—WNU Service.)

NEW YORK.—Capt. Oliver Lyttleton who tells the British they can't fight a war and keep their pants pressed, at one and the same time, is one of the handsomest and wealthiest and, to date, best-dressed men in England. It is as president of the board of trade that he rations clothing and decrees the proud distinction of shabby apparel. It is now smart to be shabby in Britain.

Frayed Cuff and Threadbare Knee Smart in Britain

Mr. Lyttleton is managing director of the huge and powerful British Metals Corporation Ltd., and, before taking his present post last year, was controller of non-ferrous metals. Under a wide extension of his powers as head of the board of trade, he was enabled to take over industry for defense purposes and to shift and re-allocate labor to any tasks he deemed necessary. He proceeded swiftly with his mobilization of defense resources.

This assertion of governmental control caused the newspapers to tag him as the "czar of industry," and it is interesting to note that our Edward R. Stettinius Jr. is thus headlined, as the mandatory priorities bill gives him the power to subordinate all production to defense. The extended parallel is also interesting in that Mr. Stettinius is also a steel-master, former chairman of the board of the United States Steel corporation.

England, perhaps more uneasy and alert than we in the abstractions of social change, was quick to interpret this centralization of power as of profound significance. Beaverbrook's Evening Standard said: "This constitutes the biggest economic and perhaps social revolution that this country has faced since the breakdown of feudalism. In fact, we are on the verge of a vast experiment in syndicalism."

Captain Lyttleton has never been involved in any such social drift. He is Cambridge bred, the inheritor of a vast fortune and an ancient name, a hard-hitting industrialist and soldier with a reputation for quick and effective action in any emergency. He fought through the World war with the Grenadier Guards, gathering the D.S.O. and several mentions in dispatches. He is 49 years old.

MUCH as it esteems tolerance, this department occasionally has noted that people who always can see both sides of everything are frequently taken down with alternating personality, or something like, and just cancel themselves out.

New OPM Deputy Boss a Wonder at Human Catalyzing

James L. O'Neill, appointed deputy director of the OPM Priorities is an exception. The baldish, amiable, friendly New York banker has an instinct for understanding the other man's point of view, and at the same time holding to his own. It upped him steadily in the business world, to his present post of operating vice president of the Guaranty Trust Co. of New York. This ambidextrous vision has given him rare effectiveness in personnel problems and in allaying friction in management. That might have a bearing on his moving into the OPM at this moment.

A Republican, he had a flexible attitude toward the early New Deal, and was loaned by the bank as control officer of the NRA in December, 1934. When the Supreme court saw only one side of the NRA, and not the sunny side, if any, Donald Richberg moved out and Mr. O'Neill moved in, as administrator. He solved the problem of immediate personnel by firing about one-third of it, but by this time the NRA was functioning only to save funeral expenses. Mr. O'Neill liquidated it in neat and workmanlike fashion, and went back to his bank. But he left many friends in Washington, and should be helpful in breaking priority log-jams. He is known as a marvelous human catalyzer. He was born and grew up in Pittsburgh.

Mr. O'Neill drove a grocer's wagon at the age of 10, became an errand boy for the Bradstreet Corp., and later credit man for the Carnegie Steel Co., a job which nurtured his talent for mixing and pacifying.

After 22 years of this, he joined the Guaranty Trust Co., in 1918, engaged at first mostly in personnel studies. He likes people and can understand almost anybody. He is deeply religious and is occupied as a Presbyterian layman in church and welfare undertakings at his home in Short Hills, N. J.

Aluminum Salvage Campaign Begun

The Office of Production Management has begun a salvage campaign to collect aluminum cooking utensils and other scrap metals. If successful it may be expanded to a nationwide "pickup" campaign, to begin about July 4. The photo shows three Richmond, Va., residents with their contribution to the "sample" salvage campaign.

'Big Four' of Congress Meet With F.D.R.

First on President Roosevelt's schedule after a busy week-end at his family home in Hyde Park, N. Y., was his meeting with legislative leaders, the "Big Four" of congress. L. to R., Majority Leader John McCormack, Speaker Sam Rayburn, Vice President Henry Wallace, and Sen. Walter F. George, chairman senate foreign relations committee.

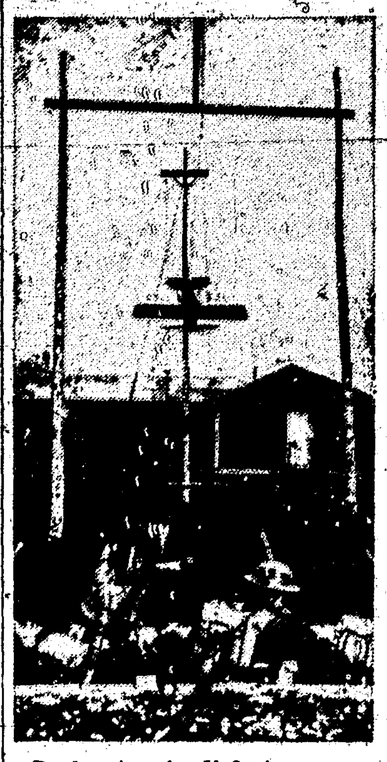
World's Most Charming Profile

This photograph makes the fact even more obvious that Queen Elizabeth of England has the most charming profile in the world. She is seen everywhere encouraging her subjects during the arduous days of warfare. This time she was snapped while inspecting the members of the war auxiliary services, who in Great Britain's new war parlance pass muster under the name of "wrens."

Super-Bombs Dropped on Germany

Heavy bombs, some of them weighing up to 2,000 pounds, are shown being loaded aboard a British bomber before a raid over German territory. The British censor-approved caption describes them as some of Britain's new "beautiful" bombs, whose blasting power, five times that of any previous bombs, are blowing German factories to bits.

Dive Bomber Lesson

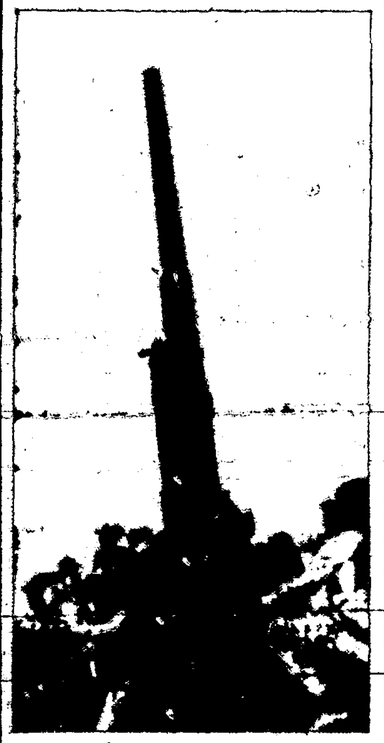


Device to give infantrymen an idea of the way to fight dive bombing. Model plane is hoisted to top of pole, where it is automatically released to swoop down on a wire towards trench in which infantrymen wait. This photo was taken at Halifax, N. S.

Justice Retires

U. S. Supreme Court Chief Justice Charles Evans Hughes, 79, who submitted a request for retirement to the President, effective July 1, because of age and health.

'Tuning Up'



Soldiers of the Sixty-first field artillery "tuning up" a huge anti-aircraft gun for maneuvers, during which more than 66,000 men will move into simulated warfare over 600 square miles of central Tennessee.

In Dad's Shoes

Sen. Andrew Houston of Texas, 36, who takes seat occupied by his father, Sam Houston, in 1941. He is shown (left) with Sen. Tom Connally of Texas.

LEAVES from Uncle Sam's Notebook

(WNU Service) by HARRIET MAY WILSON

Annual Flowering Plants

The most ardent advocate of the perennial border would not deny that the annuals, with their color, their fragrance, their usefulness in the production of cut flowers, and their flexibility of arrangement have a very definite place in any decorative scheme, whether for a farmstead or for a city lot. If planted with discrimination, annuals may be made to serve a variety of purposes, such as the temporary screening of unsightly objects, the smoothing up of ragged borders, or the furnishing of bloom and color at a time of year when most perennials have ceased to bloom.

Soil Preparation.

Since the annuals make a rapid growth they must be supplied with particularly advantageous growing conditions. They do, of course, vary in their requirements, but for the most part they do best in light, rich loam with plenty of well-rotted manure spaded in. Where beds are permanent, provision can easily be made for the varying requirements of the plants, by using a heavier clay for plants requiring heavy soil, and more sand and leaf mold for plants needing lighter soil. If, however, the planting is impermanent, as on a rented plot, it is still possible to grow an attractive supply of annuals, by choosing the kinds of flowers to be grown with relation to the soil available. In any event, it will pay to supply the growing plants with barnyard manure, cottonseed meal, bone meal, or some similar organic substance. The value of these fertilizers is about in the order named.

Water Supply.

In nearly all parts of the United States the natural rainfall is sufficient, provided that the seedbed has been properly prepared, as indicated above. Plantings close to a building, where the roof keeps off a good bit of rain will require special attention, as will the entire planting in a season of drouth. A thorough watering, once a week, is sufficient for a retentive soil; for a sandy or thin soil, more water will be required, but it should be borne in mind that too frequent watering is as bad as to let the plants go too long without water, since it encourages a surface root development. Shallow roots die quickly under even a day of neglect or of unusual heat. Water deeply and thoroughly when you do water; as soon as the soil is dry enough to work, scratch the surface to provide a surface mulch; then let it alone until another watering is really imperative.

Starting the Plants.

With the exception of a few plants which do not stand transplanting, annuals are sown in seed beds and transplanted to permanent locations after their true leaves form. It is true that many can be planted where they are to grow, but better plants are obtained by transplanting.

What to Plant.

For screens or backgrounds, choose some of the tall, richly foliaged plants, such as castor-beans and sunflowers, or some of the corn-like plants—sorghum, milo maize, and the like. Other plants, not quite so tall as those just mentioned, but still reaching a height of three or more feet are the old favorites, Joseph's Coat and Love-lies-bleeding. Both of these are easily grown and both have brilliant foliage and make a sturdy, upright growth. Princes-feather, too, is an upright annual, three to four feet tall, with dark red, feathery flowers.

For cut flowers, and also to provide the note of blue in the garden, use larkspur—30 inches tall—or the charming cornflower, often called bachelor's button; use, also, the lovely scabiosa, called mourning bride or pincushion flower. The scabiosa varies in color through rose, crimson and blue to nearly black.

For masses of color in the garden, plant scarlet sage (which does best in a light, very rich soil), zinnias, calliopsis, or summer chrysanthemums. All of these are good for cutting. The scarlet sage is particularly effective against a green background.

For fragrance and homey charm, plant mignonette, petunias, pinks, Sweet William, and sweet alyssum.

For great hardiness, choose sweet alyssum, California poppy, cornflower, larkspur and snapdragon.

Finally, for lovely lemon and yellow blooms which may be cut and dried for winter bouquets, plant strawflower.

For further information concerning varieties and cultivation, send ten cents to Superintendent of Documents, Washington, D. C., asking for Farmers' Bulletin No. 1171.

* * *

VALUE OF SKIM MILK

Skim milk contains practically all of the food value of whole milk except that it lacks the butter fat. It may be made into cottage cheese for human consumption or may be fed, with excellent results, to calves, pigs and chickens. It is valuable for use in fattening pigs and fowls, and also for feeding to laying hens.

CHAPTER XIII—Continued

—14—

Peter's boat in fact drew near; and when he saw them watching, Peter called: "Well, Mary, you saw something today!"

She felt suddenly pity for him, thinking how crushed he would be when he knew the truth about his fatherhood, knew himself disowned by Captain Ira Corr.

"That was fine," she told him. "Wonderful!"

"You have to know how to handle 'em," he said complacently. "There's more to whaling than bull luck. Dick isn't the only man aboard can kill a whale. Where is he?"

"Gone to change his clothes," Mary said; and as the boat came alongside George added:

"His arm's bruised. The flukes hit him."

Peter laughed. "Probably rubbing liniment on it," he said. He swung up to the deck. George called to Corkran:

"Great job you did!"

Corkran shook his head apologetically. "I went in too high with the lance, sir. Over his shoulder blade. If I'd got him right he wouldn't have sunk."

"Good job, just the same," George insisted. He and Mary went aft with Peter.

Mary told George: "I'm worried about Richard. I'll see if he's all right." George nodded, and she went below:

Richard was in the common room, by the desk; and he had stripped off his shirt. When she appeared, he looked across at her in an abashed way. She saw his bewildered eyes, and then he said as though ashamed of his own weakness:

"Darned arm's broken, Mary!"

"Broken?" she echoed.

He extended his left arm for her to see.

She saw that it was swollen between elbow and wrist, already beginning to show a dark, discolored bruise. Also it was twisted in an unnatural way, the hand in the wrong position, as if put on by an awkward workman. Her breath caught with pity, and she touched his arm lightly. His eyes followed her fingers as they approached; but when they touched his skin, his eyes leaped to meet hers, and for a long moment their glances held, as though each had been startled by some distant sound.

She tried to speak, and shook her head without knowing she did so, and ran to the foot of the companionway and called: "George! Peter! Richard's arm's broken. Come quick!"

George was beside her in an instant. Richard was leaning against the desk, grinning in rueful apology. "Makes me kind of faint," he said. "Takes the pith out of me." His lips were white with pain. Peter came below, asked sharply:

"What's the matter?"

George said: "His arm's broken."

Richard tried to laugh. "Funny," he said. "Joke on me."

Peter took the arm in both hands, feeling it, pressing with his fingers. "It's broken all right," he decided. "I can feel the ends scrape together."

Richard drawled: "So can I. Don't play with them unless you get a special lot of fun out of it, Peter. It's no fun for me."

They all smiled. Mary could not speak. Richard was so strong and splendid, to stand thus weak and broken now. Her eyes burned with unshed tears.

George reflected helplessly: "All I know about broken bones is to keep them quiet till you get a doctor."

Mary whispered: "Can't we go into port, somewhere?"

No one answered her. Their minds were dulled by this emergency. It was Richard who suggested calling Isaiah and Hiram. Isaiah volubly assured them that he had set more broken arms than you could shake a stick at.

"You go make a splint, Hiram," he told the carpenter. "What we want is a couple flat pieces of cedar, 'bout so long and 'bout so wide."

Hiram went to obey, and Mary to tear some of her own garments into bandages. When they set the broken bone, she bit her lip, watching Richard's mouth twitch as they tugged at his arm. Isaiah and Peter held the arm stretched in position while Hiram laid on the splints and bound them in place and when the thing was done, Isaiah nodded in satisfied approval of his own work.

"There ye be!" he said. "Month from now, Cap'n, you won't know it ever happened."

Richard protested: "A month?"

"A month anyways. Yes, sure."

Mary asked: "Shouldn't he have a sling?"

Isaiah shook his head.

Richard grinned at his own plight. "Well, a fine lot of use I'll be around here for a while," he said. "Peter, you're going to have to handle things."

Peter nodded carelessly. "Sure," he agreed. "I'll look out for you." Before noon they sighted whales again; and Peter lowered, and Corkran got two irons home handsomely. Peter himself lanced this whale as easily as killing a chicken, and he came back to the ship drunk with swaggering with a new sense of power.

The blubber and the bone were safe aboard by dark that night; and a great moon rose to silver the slippery, stained decks and pale the glare of the fires under the trypots.

They had buoyed the whale which sank, and while they were cutting in and trying out this new kill, they stayed near the buoy. On the second morning they saw the dead whale afloat, swollen with gases. They brought it alongside too. Despite the steady work, everyone aboard was in good humor; for one more whale, Richard said, would fill their last casks. They finished trying out, stowed the oil, scrubbed ship, cruised daily to and fro.

But their luck did not repeat itself; they went day after day vigilant and yet without success. On a steady westerly they moved down again toward Juan Fernandez, working offshore for a while; and inaction began to weary them and fret the patience of every man aboard, till at last Richard decided to put in to Talcahuano.

"We might strike oil at the Cape Verdes," he said. "And if we don't, we've done well enough. It's time to be getting home."

There was, Mary would find, a surprising lot to be done by way of refitting. Richard warned her that rounding Cape Horn they were sure of cold weather; and she saw the sailors in their spare time on deck busy with mending and patching, preparing warm clothing for the high latitudes. And in the land locked harbor of Talcahuano the ship herself put on a new dress. Her old sails, patched and repatched and dingy with smoke, were unbent. The rigging was tested and repaired where repairs were needed, and freshly tarred. Richard bought beef

Peter laughed. "Secret? You can't keep a secret aboard ship."

cattle and had them butchered and the meat salted down; he bought biscuit and molasses, tea and coffee; and fruits and vegetables were brought aboard. Richard himself went to a physician, who found it necessary to break his arm afresh and reset it to prevent a malformation; and in the reaction from that ordeal, and in a rising impatience to be at home, he decided to forego the chance of another whale. So the bricks of the tryworks were thrown overboard, the pots stowed below, the sheathing on deck and at the gangway removed; and early in December, stripped and fit, the Venturer was ready.

Feik and Barbo left them at Talcahuano. Feik's illness had passed within a few days; but the two islanders found a chance to sign on the Nancy Drake, a bark bound westward, which had put in here for repairs after a rough time off the Horn. So Richard paid them off, and he did not fill their places. To work ship he had men enough. Soon after noon one day the Venturer put to sea.

The next morning Mary rose and went on deck to view the day as though it were something new and beautiful, never seen before. She was completely happy; but before the day ended, her world had changed.

She was in her cabin alone, George and the others all on deck; and she began to put her things in order, as though it were already time to pack to go ashore. So doing, she remembered the pearls Jarambo had given her.

And looking for them, found they were gone.

CHAPTER XIV

The loss of the pearls did not in itself grieve Mary; but the manner of their going had alarming implications. Whoever had stolen them was by the very fact of his guilt made potentially dangerous to the ship and to them all. Peter knew of the existence of the pearls, knew they were somewhere aboard; and he could not be surely crossed off the list of suspects. Certainly he held himself to no strict rule of honorable conduct, since Mary came aboard the Venturer he had wooed her who was George's wife.

Yet this consideration, which might have damned him, actually persuaded Mary at last that he was innocent. She was woman enough to understand that Peter—or any other man—might love her; and she was woman enough to forgive Peter.

But she was sure at last that, loving her, he would never have stolen her pearls.

Who, then?

Feik might have taken the pearls before he and Barbo left the ship at Talcahuano; and Mary hoped he had! If he had them, they and the thief were gone. But of the men still aboard, there remained only Rannels. Mat Forbes' harpooner was a fat young man, with a deceptive fatness that had strength behind it. There was something shifty about Rannels.

Thinking of Rannels made her suddenly afraid, and as much to reassure herself as from any real conviction, she decided that Peter had found the pearls and had put them in some place of greater security. But when she asked him whether this were true, he shook his head.

"I've never seen them since you showed them to me," he declared. "Where were they hidden?" She told him, and he listened, frowning soberly. "I'd have thought they'd be safe there," he admitted. "Did Richard know about them?"

"He knew I had them, but not where they were." She added: "I hope it was Feik. I hope he's got them, hope they're gone."

Peter chuckled. "I don't," he protested. "I liked the look of them. If anybody gets them, I'd like to be the one. I'm betting they're still aboard."

"I think we ought to tell Richard," she decided. "If they're aboard, whoever has them, it might mean trouble. But I don't want George to know about them unless he has to."

Later she reported the disappearance of the pearls to Richard. He said good-humoredly: "Shucks, you probably took them yourself, hid them somewhere else; and now you've forgotten where."

"You must think I'm an idiot!" She was at once hurt and angry.

"Sure you didn't?"

"Of course I'm sure."

"Then it was probably Feik," he decided. He frowned. "Now, I'm wondering if that barrel of ambergris is still in the cabin stores. I'll have a look and see."

The ambergris was safe, and nothing new happened to alarm them; but there was after that day an added vigilance in Richard's manner. He kept a more watchful eye upon the men, and went out of his way and outside any real need to keep them busy. He was forever shifting sails, trying this way and that to get greater speed out of the Venturer.

In the end it became necessary to tell George about the pearls. Mary and Richard and Peter were apt to discuss the pearls whenever two or all three of them were together and out of reach of other ears; and a man less sensitive than George must have seen that he was excluded from some secret which they shared. He was for a while too proud to confess that he saw this.

But in the end he questioned Peter. "I've had an idea you, Mary and Richard have a secret between you."

Peter laughed. "Secret? You can't keep a secret aboardship, No. Don't you worry, George!" he urged. "Richard's all right, and so's Mary. Of course, it would go to any man's head the way she looks at him; but they'll be all right once we're ashore."

George said after a moment: "I trust Mary, and Richard too, of course. Only I've wondered, sometimes."

"Here, I'll show you you're wrong." Peter spoke easily; he took George by the arm, led him across to the other side of the deck and forward, so that they would approach Richard and Mary unseen, from behind. "We'll get near enough to hear what they're saying," he proposed.

But George stopped. "No," he said curtly. "I'm not a spy!" Before Peter could urge him, he called to Mary, still some distance from them.

He called her name, and there was a note of warning in his voice. That call startled her, made her turn with guilty cheeks; for when she had followed Richard forward, she was thinking of his forbearance toward Peter, and when they were alone, on sudden impulse she said: "Isaiah told me Peter's not really your brother, Richard."

He said in a low tone: "I'd have Isaiah whipped for that, if he weren't old enough to be my grandfather."

"Everyone will know when we get home."

Richard shook his head. "No, they won't! Not even Peter, if Isaiah and Hiram keep their mouths shut. I'm going to have the lawyers tear up Father's will, or else I'll take Peter in as partner. He can run things ashore."

"I haven't even told George."

"Don't," he urged. "If Peter knew about it, it would knock him all to pieces, Mary."

"I won't, of course. I noticed in the log one night that your father never called Peter his son; but he always did you. He was pretty proud of you, of course."

Clogged Disposal System

QUESTION: After 14 years our cesspool has filled up. The contractor tells me that the sides are clogged with grease from the kitchen sink, and that if he pumped it out it would only fill up again. Do you know of any chemical that I can put in to dissolve the grease?

Answer: I do not know of anything that can be counted on to be effective. The one remedy for that condition is to dig a smaller cesspool alongside the first, to fill by overflow. The connecting pipe should go below the surface of the liquid in the first cesspool, so that grease will not be carried over. I know of such arrangements that are still giving excellent service after many years. All such trouble would be avoided if, in building a new cesspool, a grease-trap is placed in the drains from the kitchen sink and the laundry tubs. Of course, the grease-trap must be cleaned out every few months, which is not difficult.

Chimney Creosote

Question: My house, 125 years old, is shut up for the winters. When I go up, I find great black stains from creosote that has run down the inside of the chimney onto the floor. The chimney is new from the roof up. What to do?

Answer: As the creosote appears after periods when the house has been empty and cold, the trouble must start with leakage of rain. The roof flashings around the chimney may be defective, and should be inspected. If the flue is very large, as was usually the case with houses of that age, you should put on some sort of a cap to keep out rain. Your architect can suggest a type to conform with the design of the house.

Sawdust Insulation

A reader sends a clipping from a Canadian paper that recommends the use of wood shavings and sawdust for insulation, adding that "I always supposed that both of these products were subject to spontaneous combustion."

Answer: Sawdust and shavings are not practical for a house, not because of the possibility of spontaneous combustion—which is remote—but because they absorb and hold moisture, and are also attractive to vermin as nesting material. Sawdust and shavings can be used in icehouses and similar buildings where their disadvantages would not matter.

Red Sandstone Walls.

Question: I am planning to build a house, one wing of which will be of red sandstone. One of my friends suggests a stone veneer of six or eight inches. Another suggests solid walls of 12 inches furred with 2 by 2 inch strips. My concern is freedom from dampness in the interior of the house. Which type of construction would you advise?

Answer: A furred out solid stone wall is satisfactory, but my preference is for veneered wall construction. The additional air space, sheathing boards and sheathing paper in a veneer construction make a wall more resistant to weather and dampness.

Downdraft in Chimney

Question: I have been troubled at times with a downdraft or backdraft in my chimney, and it has been suggested that a revolving top be put on the chimney. Will this correct the condition? What effect will it have on the draft?

Answer: A revolving top on the chimney will help prevent downdrafts, and will not affect the draft in any way if the top is sufficiently large. Down drafts may be due to too low a chimney; the top should be at least three feet above a flat roof and two feet above the ridge of a peak roof. A nearby tall tree may also cause this difficulty.

Rolled-Up Linoleum

Question: I have had a roll of linoleum standing in my attic for three years. Now I want to use it, but am told that it is likely to crack when I unroll it. How can this be prevented?

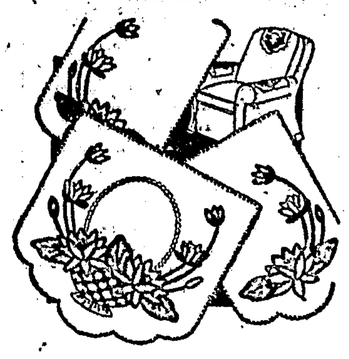
Answer: The only treatment that will protect your linoleum against cracking when you unroll it is to get it thoroughly warm. It will then have greatest flexibility. Any liquid or other treatment would damage the linoleum, and might make it useless.

Caster Marks

Question: I have soft wood floors in my bedrooms, and on moving the beds the casters make deep marks. Can this be prevented?

Answer: Casters for furniture used on soft wood floors should have rollers of felt, or some similar soft composition; the rollers should not be metal or hardwood. Casters with felt rollers can be had at large hardware stores or from the mail order houses.

THINGS for You TO MAKE



Transfer Z9333

ENRICH a protective chair set with this graceful waterlily motif. The leaves and stems are to be appliqued in green; pastel blooms and a basket of brown are embroidered. You'll be proud to display this easy-to-make set to your friends.

• • •

Matching sets for divan and chairs may be made from transfer Z9333, 15 cents, since it is one of the new improved hot iron transfers which will stamp more than once. This could also be used for an attractive buffet set. Send your order to:

Self-Denial

It is the abnegation of self which has wrought out all that is noble, all that is good, all that is useful, nearly all that is ornamental in the world.—Whyte-Melville.

CHECK UP ON VITAMIN C

It's one you need fresh daily!

Get it deliciously from fresh orange juice!

You cannot "store up" vitamin C in your body. That's why you need a *fresh and full* supply each day to help you look and feel and do your best!

It's hard to get enough unless you have an abundance of citrus fruits. But it's *easy* with orange juice—an excellent, *natural* source! Eight ounces supplies all the vitamin C you normally need each day—*plus* valuable amounts of vitamins A, B_1 and G; calcium and other minerals.

Enjoy a BIG glass every morning. Make it with trademarked Sunkist Oranges, the finest from 14,000 cooperating California-Arizona growers. *Best for Juice—and Every use!* Copyright, 1941, California Fruit Growers Exchange

VACATION TRAVEL

The 3,065,000 miles of highways in America, upon which virtually "one-third of a nation" will travel on vacation jaunts this summer, play a second role as the arteries of a vast dollar flow from section to section, state to state, coast to coast. American highway tourists will spend between five and six billion dollars for vacation tours this year, according to estimates of travel bureau experts.

By U. S. estimate, approximately half the 27,300,000 cars registered in the country will carry their owners on summer jaunts averaging 3,300 miles, a greater distance than from the Atlantic to the Pacific. With an average of 3.5 persons per car, this represents some 47,775,000 Americans en route over the highways.

Virtually every fourth car on the road today is a Chevrolet, according to William E. Holler, Chevrolet's general sales manager, who has headed an organization that has sold a million cars a year during the seven years he has held that position. "Assuming that Chevrolet owners are represented among the summer tourists only in proportion to the number of Chevrolets as compared with all other makes," he said, "by the law of averages, Chevrolet owners will spend more than a billion dollars on summer vacations.

NEW MEXICO MOTORISTS WOULD BE HIT HARD BY HIGHER FEDERAL GASOLINE TAX

New Mexico motorists, a majority of whom earn less than $30 a week, would be hit hard if Congress adopts the proposal before it to increase the federal gasoline tax to 2½c per gallon, Dudley Cornell, Secretary of the New Mexico Petroleum Industries Committee, said today.

More than half of the car-owning families in this state, government studies indicate, have incomes of less than $30 a week. If the federal tax is increased the levy will then take each year an average of half a week's income from a majority of the car-owning families in New Mexico," said Mr. Cornell. "That will be in addition to the high state automotive taxes, which absorb two weeks' income of many families.

"Motor fuel is not a suitable base for taxation by the federal government. It is not a luxury. It is used by wage earners to get to and from their jobs, by wives to do the marketing and to take the children to school. Gasoline makes great contributions to the economic and social welfare of families with modest incomes, elevating considerably their standards of living at small expense.

"Motor fuel ranks with food, housing and clothing in the lives of American families. Sound taxation policies demand that undue burdens are not placed upon the table, the roof, the raiment or the transportation of the families with modest and low incomes in the United States," continued Mr. Cornell.

"It is important that sound taxation policies should prevail in this country during the coming difficult years. Motor fuel the country over is carrying a burden of federal and state taxation that averages nearly half of the retail price. No other comodities, except luxuries, are subjected to such heavy taxation. Instead of increasing the load on this comodity, efforts should be made to distribute the present burden more equitably."

STATE SOIL CONSERVATION COMMITTEE OF NEW MEXICO NOTICE OF REFERENDUM ON CREATION OF PROPOSED CLAUNCH-PINTO SOIL CONSERVATION DISTRICT, EMBRACING LANDS LYING IN THE COUNTIES OF TORRANCE, SOCORRO AND LINCOLN IN THE STATE OF NEW MEXICO

To all owners of land lying within the proposed Claunch-Pinto Soil Conservation District, comprising the territory described as follows:

LEGAL DESCRIPTION OF THE CLAUNCH-PINTO SOIL CONSERVATION DISTRICT

Beginning at the quarter section corner of the north boundary of Sec. 5 T1S, RN 13E; thence south 1½ miles to the quarter section corner of Sec. 8T1S, Rn 13E; thence in a southwesterly and southerly direction along U. S. Highway 54; to a point near the quarter corner on the south boundary of section 23, T2S, R12E; thence west about 10½ miles, south 2 miles, west 5 miles to the northwest corner of sec. 5 T3S, R10E; thence south 6 miles along the Lincoln-Socorro county line, west 7 miles, to the northwest corner of T4S, R9E, thence south 3 miles, west 4 miles, south 1 mile, west about 8 1-3 miles to the southwest corner of Sec. 19 T4S, R7E, thence along the west boundary of the Cibolla National Forest, north 7 miles, west 2 miles, north 1 mile, west 1 mile, north 2 miles, west 6 miles, north 6 miles, east 2 miles, north 3 miles, west 1 mile, north 3 miles, to the south boundary of Torrance county in R5E, thence east about 16½ miles to the SE corner of Sec. 32, T1N, R8E, thence north 2 miles, west 1 mile, north 2 miles, west 1 mile, north 2 miles, to the southeast corner of T2N, R7E, thence west 6 miles, north 6 miles, east 6 miles, north 3 miles, east 8 miles to the NE corner of Sec. 20 T3N, R9E; thence along the west boundary of the Lincoln National Forest, south 2 miles, east 1 mile, south 2 miles, east 1 mile, south 1 mile, east 1 mile, south 1 mile, west 1 mile, south 6 miles, east 3½ miles, south 1 mile, west 1½ miles, south 1 mile, east 1 mile, south 1 mile, to the SE corner of Sec. 31, T1N, R10E; thence east about 19½ miles to the point of beginning. The district is to exclude the following lands belonging to J. H. Armstrong, S. A. Corley, J. A. Easley, H. A. Bosh, John Morrow, A. C. James, J. M. Beal, John Montgomery, Roy Montgomery, Mack Wells, Grady Wells, Jim Wells, Kenneth Galloway, Fred Phipps, John T. Maple, Bearl Talley, Matt Talley, Jim Talley, Jack Beal, J. D. Draper, D. Martin, Ross Johnson, T. A. Corley, Jim Montgomery, Red Talley, Thel Schoonover, L. H. Claunch, Estanislao Bello, Mr. Etheridge, Mr. Bennett, all of Claunch, New Mexico. All properties within the exterior boundaries of this soil conservation district of a residential, business, or non-agricultural nature are hereby excluded, omitted, and specifically excepted from this soil conservation district.

Notice is hereby given that on the 25th day of June, 1941, between the hours of 8:00 a. m. and 5:00 p. m., a referendum will be held in the said territory upon the proposition of the creation of the Claunch-Pinto Soil Conservation District as a governmental subdivision and a public body, corporate and politic, under the provisions of the Soil Conservation Districts Law of this State.

All persons, firms, and corporations who shall hold title to, or shall be in possession of, any lands lying within the said territory as owners, are eligible to vote. Only such persons, firms and corporations are eligible to vote.

Polling places for the referendum are as follows:

Center Point, Torrance County, New Mexico,

Claunch, Socorro County, New Mexico.

Corona High School Gymnasium, Lincoln County, New Mexico.

Eligible voters residing within the proposed district shall cast their ballots at the polling place for the division wherein they reside. Eligible voters not residing within the proposed district shall cast their ballots at the polling place for the division which includes their land, or the greater part thereof. Eligible voters who will be absent from their division on the day of the referendum may apply in person or in writing to Fred Shumate, Polling Superintendent, at Claunch, New Mexico, for absentee ballots. Each applicant for an absentee ballot shall take his name, residence, location and acreage of land owned or possessed, and interest therein.

NOTICE FOR LUMBER AND STEEL BIDS

The Lincoln County Board of Education is asking for sealed bids on Lumber and Steel for the Ruidoso Gymnasium, bids to reach this office by June 14, 1941.

Prices must be f. o. b. the Ruidoso Gymnasium. Below is a list of required lumber.

Pieces, Size, Length and Descriptive achievement test results tion as follows:

6M 1x6 S-1S-1-E No. 2 Pine or Fix. Native Sub Floor
50 2x12 16 Rgh. Native Pine or Fix. Joist over Bas.
312 2x8 16 Rgh. Native Pine or Fix. Fl. Joist & Girders.
290 2x10 16 Rgh. Native Pine or Fix. Roof Joist
116 2x10 12 Rgh. Native Fix. Roof Joist
250 2x6 16 Rgh. Native Pine or Fix. Ceiling Joist
96 2x6 12 Rgh. Native Pine or Fix. Ceiling Joist
16 2x8 18 Rgh. Native Fix. Wood Truss
16 2x6 16 Rgh. Fix. Wood Truss
20 2x4 18 No. 1 Fix. Bucks
2M 1x4 Rgh. Pine or Fix. Bridging
2½M 1x3 S4S No. 2 Pine or Fix. Stripping
7300 Ft. No. 2 Red Oak Flg. 7300 Ft.
58 16 inch x 32 inch Celotex Concealed Nailed
2M Nails 8 - 10 - 12 - 16 D. Com. as ordered.
4 steel trusses, approximately 64 feet long.
1 I Beam 16 inches x 26 feet 0 inches.

Steel Sash specifications: All steel sash shall be horizontal pivoted type as mfg. by Ariston Steel Products or equal in size, quantity, and with hardware as listed below:

No. Required, Gl. Sizes and Hardware as follows:

10 55101 12x18 Spring catch No. 20 - 5
10 55101 12x18 Chain Roller No. 7 - 1
10 55101 12x18 Chain Cleat No. 6 - 2
4 52160 12x18 Stay Bar No. 32 - 3
4 52160 12x18 Hook Bracket No. 6 - 4
2 53101 12x18 Spring Catch No. 20 - 5
2 53101 12x18 Chain Roller No. 7 1
2 53101 12x18 Chain Cleat No. 6 - 2

Bolts and anchors as follows:
16 5-8 inch x 1 foot 0 inches.
160 1-2 inch x 0 feet 8 inches.
48 3-8 inch x 0 feet 10 inches.
60 1-2 inch x 0 feet 8 inches.
220 1-2 inch Cut Washers.
48 3-8 inch Cut Washers.
350 Bull Dog Floor Clips.
75 Sqrs. 29 gage galvanized roofing.
210 lineal ft. box gutter, 28 gage iron.
105 lineal ft. conductor pipe 4 x 6.
200 lineal ft. 7½" counter flashing.

The County Board of Education reserves the right to reject any or all bids.

LINCOLN COUNTY BOARD OF EDUCATION,
Mrs. Ola C. Jones, Secretary.

NOTICE OF HEARING OF FINAL REPORT AND ACCOUNT

In the Probate Court of Lincoln County
State of New Mexico

In the Matter of The Last Will and Testament of J. E. Clarke, Deceased. } No. 498

To: Alma H. Clarke, Bartene Von Stuve, E.M. Clarke, J.E. Clarke, Jr., C. H. Clarke, Jack A. Clarke, Mary Eliza Clarke and M. S. Clarke and to all unknown heirs of the said decedent, and all unknown persons claiming any lien upon, or right, title, or interest, in or to, the estate of the said decedent, and to whom it may concern:

You, and each of you are hereby notified, and notice is hereby given, that Alma H. Clarke, Mary Eliza Clarke, and J. E. Clarke Jr., joint executrices and executor of the Last Will and Testament of J. E. Clarke, deceased, has filed in the above entitled Court their final report and account as such joint executrices and executor, and the Court has appointed Monday, the 21 day of July, 1941 at the hour of 10 o'clock A. M., as the hour and day for hearing of objections, if any there be, to the approval and settlement of said final report and account, and the discharge of said Alma H. Clarke, Mary Eliza Clarke and J. E. Clarke Jr., as such joint Executrices and Executor, and at the hour on the day named, the Probate Court will proceed to determine the heirship of said decedent, the ownership of his said estate and the interest of each respective claimant thereto and therein and the persons entitled to the distribution thereof.

The name and post office address of the attorney for the Executrices and Executor is John E. Hall, Carrizozo, New Mexico.

Witness the honorable Marcial C. St. John, Judge of the said Court, and the seal thereof, this 5th day of June, 1941.

FELIX RAMEY,
Clerk,
By Thelma Shaver, Deputy

J-6-June 27.

NAUTICAL NOTES

"Aye, Aye" To the men who have lived the Navy life and learned to like it, probably there is no term that carries a richer meaning than the phrase, "Aye,aye, sir."

In the first place, "Aye, aye, sir" means: "The order is understood and will be obeyed."

It is the Navy's own expression, a heritage handed down to us from the English speaking mariners of past centuries. There is no other phrase that belongs so wholly and completely to the Navy and to the sea.

By saying "Aye, aye, sir!" when receiving the command of a superior you express not only courtesy but you also reveal yourself as a real man of the Navy and recognize your superior as such.

This expression is the Navy's most "sea-going term, with something of the atmosphere of the salt seas about it.

The Navy has many things that belong to the Navy only, but none more worthy of study and veneration than the mariner's simple phrase: "Aye, aye, sir!"

How Officers Were Commissioned

Naval Officers are commissioned by the President with the consent of the Senate. In the year 1775, a Naval officer was commissioned in any one of the following ways: by the Marine committee, which administered naval affairs, by its subordinate boards at Philadelphia and ordinate boards at Philadelphia and Boston, and by any naval commander, by recruiting agents, by commissioners abroad, or by local authorities in the several states.

Present day capital ships have more power than Dewey's entire fleet at Manila.

The first large caliber guns made of American steel were those of the battleships Indiana, Massachusetts and Oregon.

Local and Personal

Gene Hines, who is clerk for the Southern Pacific in El Paso, spent last Sunday with his parents here.

Mr. and Mrs. Vaden Elliott and little son spent Sunday here with Vaden's father, Mr. D. S. Elliott.

Charles Dow came up from Lincoln and spent last Sunday at home.

Mrs. Ira Greer and her brother, Wm. Johnson returned to their home in Tucumcari Sunday, after a short visit with their parents, Mr. and Mrs. P. M. Johnson.

Harry Kelt underwent an appendectomy at the Turner hospital last Sunday. He is recovering nicely.

Mrs. Ward Charles of Alamogordo visited her mother, Mrs. Ladema Joyce here Saturday and Sunday.

Mr. Thornton, proprietor of the T&G Grocery, is driving a beautiful new Chevrolet car.

Miss Ethel Mae Hoffman returned to her home in Kingman, Arizona last Thursday.

Joe Forsythe is general office assistant at the New Mexico Mechanical Equipment Company for Mr. Kroggel.

Mr. and Mrs. William Nickels and baby are here from Chicago to visit their parents, Mr. and Mrs. Sam Nickels at their ranch home.

Mr. Clint Branum, who is employed at Las Vegas, spent Saturday and Sunday in Carrizozo with his little daughter, Barbara Jean, his mother, Mrs. Nellie Branum and his sister Mrs. Clouse.

Dr. Carl E. Freeman and son, Lt. Carl Albert Freeman, went to Fort Bliss June 15, where Lt. Freeman took the train to Fort Benning, Georgia, where he will serve in the army.

Mrs. R. C. Hemphill and son Robert Ellis of Orogrande, spent Sunday in Carrizozo.

Mrs. Riggs Houston and daughter, Betty Jo left last week for Lubbock, Texas to spend several weeks.

Miss Ruth Barnett of Tucumcari arrived last Friday and visited her parents, Mr. and Mrs. Meyer Barnett, until Tueday of this week. She is an employe of the Telephone Company at Tucumcari.

OVER 200 EXPECTED AT CATTLEMEN MEETING, LORDSBURG, JUNE 21

Albuquerque, N. M., May 30—President Tom Clayton of the New Mexico Cattle Growers Association, has extended a personal invitation to every member of the New Mexico Cattle Growers Association and to sessions of the First Quarterly Executive Board meeting of the Association to be held at Lordsburg on Saturday, June 21 in the County Court House. A preliminary meeting of the Board will be held in the Hidalgo Hotel.

While the principle purpose of the Board Meeting is to attend to urgent business before the Association, the morning program on the 21st of June will include addresses from: Burton Roach, Hillsboro, Chairman of the Legislative Committee, who will report on developments of the last State Legislature concerning the livestock industry; New Mexico Cattle Sanitary Board, George Cureton, Chairman Southwestern Fair and Feeder Calf Association; A. D. Brownfield, Deming, Past President of Association; C. F. Dierking, Regional Grazier for Division of Grazing and Forest Service officials and others.

B. A. Christmas, Las Cruces and Vice-President of the Association has been appointed Chairman of the General Resolutions Committee for the Board Meeting.

Present indications are that more than 200 cowmen representing all parts of the state and Eastern Arizona will be in attendance. President Tom Clayton stresses the fact that meetings are open to the public and that all cowmen in the state are cordially invited to attend and take part in the meeting.

Social Agencies Plan Recreation For U. S. Soldier

Club Houses to Entertain And Help Utilize Their Idle Time.

(Released by Western Newspaper Union.)

WASHINGTON.—Six of the country's leading social and welfare agencies will utilize their combined resources to combat undesirable influences arising in army camps over the country.

President Roosevelt has urged all Americans to support the movement which is known as U.S.O., United Service Organization for National Defense. A fund of $10,765,000 must be raised to carry out its program and the campaign is already under way.

Agencies participating in the work are the Young Men's Christian association, National Catholic Community service, Salvation Army, Young Women's Christian association, Jewish Welfare agency, and the National Travelers Aid association. Their aggregate experience in this kind of service is 317 years. The YMCA has been active in army and navy social and welfare work since 1861. Others since 1917.

The program is being carried out from closely co-ordinated plans, approved by the government, which will prevent the overlapping of social club houses, supplies, entertainment, etc., common in the past when co-operation was lacking among the various agencies undertaking this work. Few new positions will be created as the agencies will draw heavily on their own carefully

Thomas E. Dewey

trained personnel to insure the best in service. It was decided to weld the agencies into one huge unit, by the President, cabinet members, state governors and other officials because of requests from thousands of parents and because it was believed too big a project to be handled by any one agency.

Woman Defense Workers.

More than 350 clubhouses will be completed and staffed just outside army and navy bases. Military influence wanes when soldiers are beyond military boundaries and one object of the program is to give the soldier and sailor respite from military discipline. And the opportunity to enjoy social activities in preparation for the stern duties that may lie ahead. Another feature of the U.S.O. will be the home hospitality, locally, where friendly family reception will be fostered. It will also cope with the living and welfare problems of women in defense industry.

Business and government leaders are backing the program with enthusiasm and help. James A. Farley, former postmaster general, said: "It's our chance to show we are solidly behind our first line of defense. We can't afford to fail."

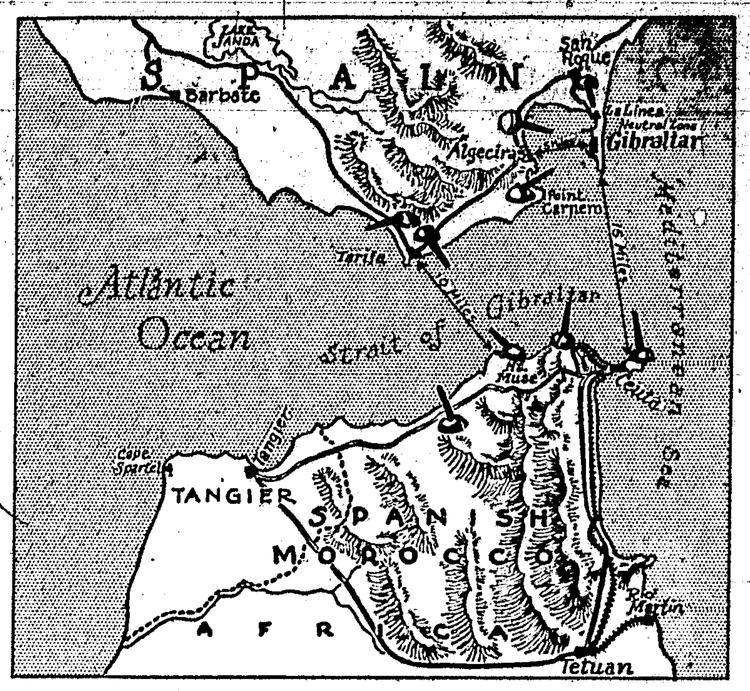
Walter Hoving, business executive and head of the Salvation Army Association of New York City, is president of U.S.O. District Attorney Thomas E. Dewey of New York county is U.S.O.'s national campaign chairman. Co-chairmen of the national Woman's Executive committee are Mrs. F. Louis Slade and Mrs. Eliot Cross. Mrs. Slade is a national director of the girl scouts. Mrs. Cross headed the women's bureau of the YMCA in Paris during the World war.

Health of Workers.

Dr. Ira S. Wile, noted psychiatrist, told U. S. authorities that "homesickness," the scourge of the new soldier, will be greatly minimized by the program. He stressed the importance of maintaining the "sound and healthy minds in healthy bodies," for men and women in our defense forces.

The U.S.O. will be non-sectarian and devoted exclusively to providing places of clean entertainment and fun for men and women of all faiths and beliefs, say officials of the program.

Axis Guns Trained on 'The Rock'



Spanish soil now bears Nazi guns, and as the map above shows, the territory of Spain and Spanish Morocco form the jaws of a vise that can trap the British Mediterranean fleet or force them to flee towards the Suez, where a threatened drive by the Germans may bottle them up. The big Nazi planted guns awaited only the word of Hitler to loose a storm of steel into the rock fortress of Gibraltar. Concealed miles back and protected by the hard rock of the Ronda range, other powerful Axis artillery would join the coastal guns in any action. Gibraltar's guns are not heavy enough to silence the long-range hill batteries, even if they could be located. Without a land base from which their observation and bomber planes could operate, the chances of the English fleet remaining in the Mediterranean sea hourly grows less.

Stamp Program Takes Up Slack In Loss of Foreign Food Markets

CHICAGO.—As the food stamp plan moves into the third year, farmers, housewives, public officials, welfare administrators and chamber of commerce organizations carefully moisten and affix their own stamp of approval to the project.

This new method of administering a subsidy, so that the distribution system would serve broad social purposes and in general maintain the essential profit-and-loss principle, was the brainchild of Milo Perkins, former manufacturer and now head of the Surplus Marketing administration in Washington.

With reservations, the blue and orange economic gadget has worked to the satisfaction of those most concerned, as evidenced by the recent arrival of the political stork, who calmly deposited a little brother in the form of the cotton stamp plan and broadly hinted that the next arrival would be in the field of low-cost housing.

Lose Foreign Markets.

When foreign markets for surplus products, principally food, faded away in 1930, and the country was faced with one of its most vexing problems, "economy of abundance," the nation's leaders cast about for a solution. People actually faced starvation while living in the midst of plenty. Jobs and savings were gone and while foodstuffs rotted in the fields for want of market, crops were plowed under, acreage restricted and marginal land retired from cultivation, in a desperate attempt to set the wheels of industry rolling again. Scientific agriculture added to the country's woes by increasing the quantity of farm products with less labor, thereby further building up the unemployment roster.

Foreign trade agreements failed to save the country's $300,000,000 volume to them, because the purchasing nations were more interested then in making themselves self-sufficient and were eliminating all possible imports.

Search for Solution.

Vice President Wallace, then secretary of agriculture, sums up the situation as it appeared then to authorities in the capitol:

"First, we had to find a market for farm surpluses, and we knew that a surplus at one price might be a sell-out at another. Second, we didn't like the spectacle of people hungry from too little food while we were worrying over too much. Senator Vandenberg proposed to solve the first problem by sending our surpluses abroad and selling them at a lower price there, but some of us thought that if we were going in for a two-price system we'd better do it at home and let our own needy have the benefit."

Studies by nutritional experts revealed some startling facts. Working people were paying only between 10 and 12 cents per meal average while those millions on relief could only allot half of that amount for their food. The result of this was to continue to pile up foodstuffs in bins all over the country.

Despite its shrinkage the major hope was still that of the domestic market because our own people would continue to buy food regardless of the disappearance of the foreign markets due to the war. After other methods had been found unsatisfactory or inadequate, such as soup kitchens for the needy and to utilize surplus wheat, lunches for school children, direct distribution of hams and other meat to households and other schemes, the food stamp plan was created.

It was first tried out in Rochester, N. Y., and is now well known and popular in the country's largest metropolis, New York city. Approximately 350 areas are now benefiting by the plan while about 1,500 more have applied to Washington.

Direct savings of $200,000 is shown by the statement of Commissioner William Hodson of the New York city department of welfare and the food stamp plan this year will cost only $77,000 as compared with the $277,000 cost direct distribution of government-purchased supplies previously.

Said Mr. Hobson, "People like the plan for many reasons. One is that they can purchase what they want, when they need it, like the rest of us do. Another because they know they can arrange a more healthy diet, and the savings will stretch the city's budget for relief cases and that is no small item."

Milo Perkins, originator of the idea, added his views on the subject by saying:

Predict Wide Benefits.

"The conservatives like it," he said, gulping down some of Brazil's surplus coffee from a paper cup, "because it goes through the regular channels of trade and spreads its benefits all along the line. They feel safer about it that way than if the government had set up its own machinery of handling. In the second place, they like it because it creates purchasing power for things they feel it a disgrace for any American to have to do without, like nourishing food. And in the third place—and you hear more about this now than when the plan started—they regard it as a hedge against trouble in the future. You'll find them talking already about what's going to happen when this war activity ends.

Improve Distribution.

"The liberals like it because they regard it as a new kind of money, and they have an obscure feeling that these blue-and-orange tickets give the needy an access to the kind of wealth they most need to have. Also, they are pleased because the plan makes it possible to distribute certain types of things that can't effectively be given away. They think our present system of distribution needs remodeling, and they'd far rather have government money spent for the better distribution of food than for buying and hoarding it while people go hungry.

"As for the middle-of-the-road man, he likes it because it makes sense to him. He's found some of the government's programs pretty hard to tie in with his own experience, but tell him 'Let's fix it so the hungry eat the surplus and he's all for it.'"

In the race between food production and consumption, with the honors too strongly with production today, there is a theoretical solution to the problem, according to the Washington experts. They suggest that a way be found to raise to $100 per month the income of all families receiving less than that today. They point out that the national expenditure for food alone would increase by approximately $2,000,000,000, which would greatly assist the farmer, and in turn, the city man, as about one-half of this amount would revert to the farmer.

Draft Boards Report Amusing Stories

Draftees wishing to evade acceptance and in many cases, though unfitted, desiring to serve, sometimes color their stories in accordance with their desire. Here are some of the little dramas being enacted daily over the country.

One man up before his board was very small of stature. Addressing the man at the table who was sitting, the potential "cannon fodder" stood and pounded the table with great vigor.

"I won't go, you will have to exempt me. I'll fight before I'll go." The one at the table lost his ordinarily well-kept patience. He arose and rolled up his sleeves. The c.f. looked at his six-foot frame of muscle, which he had not noticed before, it being wrapped around the table legs, and quickly a smile creased his face.

HOUSEHOLD HINTS

Never leave egg whites after they have been beaten stiff. If allowed to stand they will flatten and will not beat up again.

* * *

When a pie shell has to be baked twice to prevent the edges of crust becoming too brown dip a pastry brush in melted shortening the same as dough was made with and brush around edges.

* * *

To remove an old calcimine finish from walls, soak it thoroughly with hot water applied with an old brush, then remove with a sponge.

* * *

Sometimes papering the ceiling of rooms in color—instead of the usual white paper—adds to the attractiveness.

* * *

When pouring hot jelly into glasses set glasses on a damp cloth and they will not crack.

* * *

A rubber band will prevent bobbins and spools of thread from unwinding and becoming tangled.

SEND THIS AD and three negatives for free samples and special gift offer. STAR PHOTO, Box 149, Denver Colo.

Age of Plants, Animals

Plants exceed animals in the length of their lives and, surprisingly enough, in the shortness of their lives also. Parrots belong to the century group; elephants may attain an age of two centuries. A good record for the animals, but on the plant side we have the California Sequoia trees living for 50 centuries.

At the other extreme are some bacteria which have a life cycle of only 20 minutes, shorter than any animal's life.

J. Fuller Pep

By JERRY LINK

"Fuller," my Aunt Edna says to me, "there ain't nobody stingier than the person who won't pass along good news. Goodness knows, it don't cost anybody anything."

And taking that to heart, I've been tellin' the folks how KELLOGG'S PEP gives you vitamins that ordinary meals are so often shy of—vitamins B_1 and D.

Best part of it is you get 'em in a cereal that tastes so consarn good you wonder how it can be good *for* you. You win both ways!

Kellogg's PEP

A cereal rich in vitamins B_1 and D

EVERYTHING FOR HER NEW KITCHEN
(See Recipes Below)

REALLY PRACTICAL!

Whether the bride-to-be is bound for a six-room "dream house" or for a one-room kitchenette apartment, you can't go wrong if you give her a kitchen shower . . . one that's practical, of course!

And, knowing that some of you are anxious for new, clever, unusual ways to entertain, I'm ready with plans for a kitchen shower that's really different!

In Chicago's huge Merchandise Mart, where buyers from all over the country come to purchase kitchenware, I found a variety of inexpensive, yet durable gadgets which anyone about to be married would love.

To make the party practically all play and no work for the hostess, I decided to place the gifts on the table (see picture at top of column). When luncheon is over, everything is hers!

The tablecloth is of a fancy new-type oilcloth, and the place mats and napkins are none other than dish cloths.

An angel food cake pan serves as the base for a "gadget bouquet" centerpiece of measuring spoons and cup, carving set, sugar scoop, funnel, spatulas, pancake turner, strainer, tea ball, grater and other vital kitchen helpers.

The plates are pie tins. The flatware is a very inexpensive kind with gally-colored plastic handles. And note the spice jars to the right which, because they're to be gifts, hold salt and pepper while doing table duty. They're from the Griffith laboratories.

The first course of the luncheon is a tart *Cardinal Salad, set on the table right in its aluminum ring mold. A tasty Beef Stew in a casserole follows. Iced tea is poured from a tall aluminum pitcher into matching "glasses." And rolls, all buttered, are served from a compact, serviceable bun warmer, which may be the hostess' gift. Dessert is *Peach Upside Down Cake, served from a square cake pan.

***Cardinal Salad.**

1 package lemon gelatin
1 cup boiling water
¾ cup beet juice
3 tablespoons vinegar
1 cup cooked beets, diced
½ teaspoon salt
2 teaspoons onion juice or grated onion
1 tablespoon horseradish
¾ cup celery, diced

Dissolve gelatin in boiling water, add beet juice, vinegar, salt and seasoningd. Chill until slightly thickened. Fold in vegetables and mold.

***Peach Upside Down Cake.**

1¼ cups sifted cake flour
1¼ teaspoons double-acting baking powder
¼ teaspoon salt
¾ cup granulated sugar
4 tablespoons softened butter or other shortening
1 egg well beaten
½ cup milk
1 teaspoon vanilla

Sift flour once, measure, add baking powder, salt and sugar, and sift together three times. Add butter. Combine egg, milk and vanilla. Add to flour mixture, stirring until all flour is dampened; then beat vigorously for 1 minute.

4 tablespoons butter
½ cup brown sugar, firmly packed
2 cups sliced peaches (fresh or canned)

Melt 4 tablespoons butter in an 8 by 8 by 2-inch pan over low flame; add brown sugar, (¼ teaspoon nutmeg may be mixed with brown sugar, if desired), and stir until melted. On this, arrange peach slices. Turn batter over contents of pan. Bake in moderate oven (350 degrees F.) 50 minutes, or until done. Loosen cake from sides of pan with spatula. Serve upside down with peaches on top. Garnish with whipped cream, if desired.

Canned pineapple rings, cooked apricots or prunes, or sliced tart apples may be substituted for peaches in this recipe.

Going back to entertaining the bride-to-be, had you ever considered a Recipe Shower? A new idea comes to mind . . . why not serve a luncheon at which every dish, from the appetizer to the coffee, is prepared according to some favorite and tested recipe of one of the guests. Have each recipe written on the back of a place card, collect these, put them into a file box (gift of the hostess) and present them to the bride-to-be.

• • •

A shower that calls for an almost negligible outlay of money on the part of those who buy the gifts, but which will help the young bride to do some real housekeeping, is a "dime" shower.

The five-and-dime stores are bristling with simple little things the bride will use every day without being aware of them. If you'll contribute two ten-cent items, you'll be doing her a real service.

Matches, gummed labels, paste and waterproof cement (to repair the china she's bound to break sometime or another), playing cards and score pads, plenty of tissue cleansers, electric light bulbs, little wire flower - holders, assorted pads of paper for shopping lists or addresses — they're all so inexpensive when purchased separately, but how they do mount up in cost if the bride has to go out and buy the whole batch at one time!

(Released by Western Newspaper Union.)

SO YOU'RE TO BE MARRIED!

The date is all set, invitations mailed, your dress, white and simply beautiful, is hanging in the closet . . well, then the rest is easy. But, in case you're perplexed about the after-ceremony refreshments, whether they be in the form of a breakfast, garden reception or dinner, please read next week's column. Lynn will tell you how to entertain your wedding guests correctly, yet inexpensively . . . Watch for "After The 'I Do's' " . . .

LYNN SAYS:

There'll be lots to talk about at your party, and conversation, plus opening of shower presents may well fill up the allotted party time, but just in case . . . here's a clever game that suits a bridal shower to a "T."

To each guest pass a slip of paper titled "Things Found in the Bride's Home." 'Neath the title are these words (1) engar, (2) gothorphrpa, (3) elmiunol, (4) fubfet, (5) hicra, (6) rifhifcoen, (7) pavndorte, (8) blaet, (9) nurcaef, (10) pardyer, (11) kccol, and (12) pocarbud.

Ask each person to rearrange the letters in each of these 12 words to make them spell an article of furniture that would be likely to appear in the bride's new home.

The answers are (1) range, (2) photograph, (3) linoleum, (4) buffet, (5) chair, (6) chiffonier, (7) davenport, (8) table, (9) furnace, (10) drapery, (11) clock, and (12) cupboard.

To make the game more interesting, you might set a definite time limit. Collecting all papers after, perhaps, five minutes. Lollipops or some similar original, inexpensive gift may be awarded as first prize.

Summer Play-Clothes Program Conveys Exciting Fabric News

By CHERIE NICHOLAS

PLAY clothes! Let's talk about play clothes for the theme is a most fascinating one. More triumphantly, more spectacularly than ever before in the annals of fashion lore are the designers answering the challenge for play clothes that will add to the picture of golfing, tennis, hiking, swimming, motoring, and all the other sports that go to make perfect days of outdoor playtime.

A significant thing about modern play clothes is that they have a way of making one keenly fabric-minded. That saying about necessity being the "mother of invention" applies perfectly to modern play clothes' fabric production. Scientific processing is achieving materials that are as near 100 per cent perfect as is humanly possible in the matter of washability and wearability which are guaranteed to be practically non-fading, non-shrinking, non-wrinkling and all the other qualities demanded for apparel that must withstand the ravages of strenuous wear.

It is interesting to note the rise to high style distinction that is taking place among fabrics once considered of low degree. There's denim, for instance, once synonymous with commonplace workaday overalls, now playing a star role as media for the smartest tailored suits that a socialite in the smart set might don this summer in town or for country club wear. By the way, when you go shopping in the sports departments take a look at the swank slacks and shorts made of yellow denim. Top these with a vivid calico-patterned print blouse or a jacket quilted of bright figured glazed chintz and you will rank high in any fashion parade.

Carrying her tools in the pockets of a blue denim culotte outfit the pretty young miss pictured to the left in the illustration of smart play clothes is tending her flowers in most picturesque attire. Note the cotton braid trim that adds a dash of color to the huge pockets and the wide shoulder straps. A bolero to protect her shoulders and a quilted apron to protect her knees are also included in this cunning outfit.

The pinafore pair shown in the background will cheer the heart of every mother and daughter. These pinafore types should be an inspiration to home sewers in that they are so easy to make. The professional looking nicety of the edge beaming is achieved in a jiffy with a little edge stitcher found in every modern sewing machine kit. The full gathered finish given to the back-buttoned skirt is only a matter of minutes with the gathering foot attachment. The same material is used for both—a striped denim. The two outfits cost but a trifling sum to make, they promise much joy in the wearing and besides mother-and-daughter costumes are fashion's pet theme this year.

Up to the last season or so the great problem with fabricists has been to produce white materials that will come out of a brisk tubbing or cleaning process as white as when new. Welcome comes the message of white rayon pique sharkskin which is proving ideal for tennis frocks and for white suits and afternoon dresses. It is this snow-white pique sharkskin that is used to make the tennis frock shown in the foreground of the group pictured. Here is a fabric that is sure to stay in top form, having been tested and approved for wearing and cleaning satisfaction. It adds an exciting note of interest because this dress was designed by Alice Marble, national tennis champion, making it authentic news as to what's what in smart action fashions.

Chintz Housecoat

Enthusiasm for cottons in the fabric realm has crescendoed to a new high this season. The importance of cottons in the fabric realm is simply breath-taking not only because of the transcendent loveliness of cotton weaves but there is no call of the mode be it ever so humble or an event ever so festive and formal but what there is a cotton fabric that will tune into the picture perfectly. Moss roses never looked prettier in real life than they do on the cotton chintz housecoat pictured. The graduated border idea of the print makes it possible to achieve interesting effects at the shoulders and waist and in the skirt.

Non-Crushing Fabric Made From Cotton

In these vacation days of outdoor activities and week-end trips more and more the desirability of clothes made of non-crushing and non-wrinkling wash materials is recognized.

A cotton that has come valiantly to the rescue is the new boucle weave and designers are certainly making wide use of it in dresses and in suits. You just tub it, shake it out and let it dry and presto! It is all ready to wear looking as fresh and as well groomed as new.

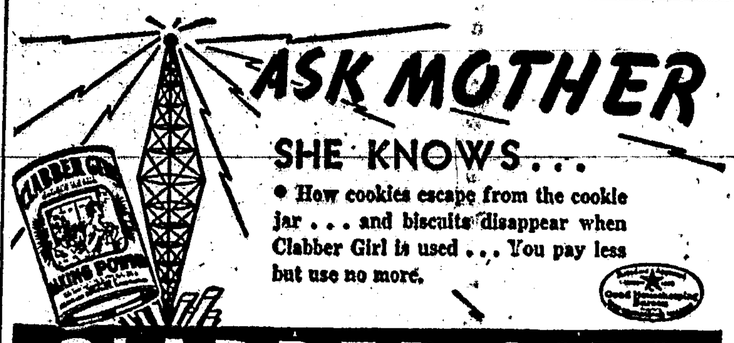
Dressmaker Bathing Suits Recall Fashions of 1890s

The fashion trend in bathing suits is to dressmaker effects done in most any material one might choose. Taffeta is especially good style; so is flowered or striped jersey. The knitted suit is a particular favorite. So definite is the dressmaker styling that one is reminded of fashions that held forth in the gay nineties. The difference between "has been" and modern styles is found in shorter ruffled bloomers, shorter (much shorter) skirts and open midriff effects.

In elastized types the princess silhouette is a favorite and even newer is the one piece ballerina elastized satin types. The Hawaiian influence is seen in large floral effects.

Knitted Cape

As everyone knows, fashion's spotlight is on capes and the vogue will continue during the fall and winter. The latest reaction to this trend is the enthusiasm expressed for capes in the knitted realm. Why not begin to knit now so as to be among the first to come out in a knitted cape this fall. You can buy capesuits now that look as if hand-knit if you prefer.



Unsought Thoughts

The thoughts that come often unsought, and, as it were, drop into the mind, are commonly the most valuable of any we have, and therefore should be secured, because they seldom return again.—Locke.

Conscience and Passions

Conscience is the voice of the soul, the passions are the voice of the body.—Rousseau.

Bed of Its Making

Jealousy spreads the bed with stinging nettles and then lies down to sleep.

Second Registration July 1st, 1941

The President of the United States has proclaimed a second registration for all male citizens and aliens residing in the United States who have reached the age of 21 years between the 17th day of October, 1940 and the 1st day of July, 1941, both inclusive.

Registration for Lincoln County will be held at the Selective Service office in Carrizozo, New Mexico, located between Alamogordo and Tularosa Avenue facing the city park. The office will be open from 7 A. M. to 9 P. M. Tuesday, July 1, 1941 for registration purposes. Men failing to comply with the regulations of the Selective Training and Service Act of 1940 are subject to fine and imprisonment under this law. We, therefore, urge that the above information be given the widest publicity possible.

Registrations may be made in Carrizozo, Corona, Capitan and Ruidoso. Locations in the last four named places have not been designated but will be published next week.

Edith McKinley, chief clerk,
Linconln County Local Board.

Do you like a baffling mystery story? Then don't miss "The Green Diary" by the well-known author, Q. Patrick. It will not only give you a thrill but will tax your powers of deduction. This gripping serial of secret vengeance and strange deaths, in which love and hate play dramatic roles, begining in The American Weekly, the magazine distributed with next week'sLosAngelesExaminer.

Harold Hoffman is driving the Roswell truck for Mr. Harkness for the summer months.

Mrs. Ralph Treat spent several days here this week visiting her parents, Mr. and Mrs. P. M. Johnson, and other relatives.

Mr. and Mrs. Edgar Phillips and children moved to Tokay last Tuesday, where they will live. The family has resided here for several years and have made many warm friends who regret their departure.

Mr. Lester Greer was in town from his ranch last Tuesday attending to business.

Miss Era Rentfrow arrived last week to be at the bedside of her father, Mr. B. W. Rentfrow, who passed away last Sunday night.

Announcing Improvements

In making this important announcement to motorists,Standard Oil has included newspapers as an important factor in advertising plans since newspapers play a vital part in the dissemination of news.

Salt in Salt Lake

Brines from the Great Salt lake in Utah contain as a rule somewhat over 20 per cent solids, and of this about three-quarters is common salt.

Dispelling the Fog

Isolationists, and included in that group most be all the people who oppose the various programs suggested to make our aid to England and other beleaguered democracies effective, have generally come to the declaration that the utmost aid to Great Britian in the way of war machines and munitions is all right.

Ex-President Hoover, the other day, in affirming the necessity of keeping up this supply said: "Let me state at the outset that I support provision of the maximum of tools of war to Britian; that I am convinced we can give this maximum during her next critical months only keep out of this war."

But nowhere in his address did the former President mention how we were going to deliver the goods in the face of raids and submarine and bomber sinking of cargo ships.

The general argument is that if we convoy the supply ships, and they are attacked, the American war craft must attack the raiders. That means a naval engaement and isolationists agree that it war. But is it?.

Early in our history we battled French frigates and corvettes and privateers. Frequently we recaptured prizes the raiders had taken. On several occasions our naval forces compelled French warships to surrender and brought them home. We patched them up, raised our own flag on them and sent them to sea again to fight the French——and still there was no war decleared. In fact, the Governor of one French island refused an exchange of prisoners on the sole ground that the conflicts did not constitute war.

NOTICE

The Committee has set June 20 as the tentative closing date for receiving applications to make mattresses. The last order of cotton has been made and all eligible applicants who make their applications prior to June 20 will be given first consideration in receiving the remainder of the cotton mattress material. Should there be material left, applications received after the closing date will be considered; but, applications received prior to the date designated will be given first consideration.

Application blanks and rules governing eligibility may be obtained at the County Agent's office.
