NYWAY he has some queer ways. That is what Peter Rabbit thinks, and Peter ought to know. But as to that it is quite probable that Busterthinks some of Peter's ways queer. It is the way of the world to think other folks queer, and Buster thinks some of Peter's ways queer, and I am quite sure that both think your ways and mine very queer indeed.

To l'eter's way of thinking one of Buster Bear's queerest habits is that of sleeping away most of the winter. Since his talk with Prickly Porky the Porcupine, Peter had begun to understand why Johany Chuck and some of the others went to sleep as soon as cold weather came, to stay asleep until Mistress Spring should arrive. They had to sleep or starve, for there was none of the food they need, and wouldn't be so long as winter insted. But somehow l'eter couldu't seem to make the reason fit the case to Buster Bear. Buster didn't seem to want to go to sleep for the winter. He had prowled around until after the snow had come to stay, and then, and not

Peggy Saved Four

Title is Peggy, of Los Angeles, who saved four persons from probable death by carbon monoxido poisoning. Although violently sick from the defidly fumes, the faithful dog, sensing something was wrong, barked a warning to arouse the household after she had falled to awaken a boy made unconscious by the gas.

"The difference between a regular widow and a gelf widow is simple. says knowing Nora. "The husband of the one lies under the sod and that of the other lies over it." (WNU Barvice.)

Shanghal, China. It provides a way to one of the well known tea houses

the following:

Peter knew that they would see no more of him until spring,

Now, why should he go to sleep for weeks at a time that way? Peter puzzled and puzzled over it as he turned it over in his mind. Johnny Chuck lives on tender green things, and in winter there are no tender green things. Old-Mr. Toad lives on worms and bugs. At least there are none where Old Mr. Tond can get them. But with Buster Bear it was different. Why shouldn't he keep awake all winter just as Reddy Fox: and Old Man Coyote do? It seemed to Peter very absurd that such a great big fellow as Buster Bear, of whom everybody else was afraid and who had such a great warm fur coat, should bide away and sleep just because it was winter. Finally he went back to Prickly Porky to try to satisfy his curiosity.

"Buster Bear is smart," said Peter. "He is one of the smartest of all the people in the Green Forest. Everybody says that. And if he is so smart why can't he catch enough to eat in the winter just as Reddy Fox and Old Man Coyote do? They don't waste | eats ment when It happens to fall in their time sleeping, and they don't his way, but what he lives on mostly

******** until then, he had stretched out on his | starve to death. They may go hungry bed of leaves under the shelving rock | some of the time. Most of us do that deep in the Green Forest, where he in bad weather. But they catch had slept away the last winter, and | enough to live on. Why doesn't Buster Bear?"

> "Hub!" grunted Prickly Porky. "You don't know much about Buster Bear. What do you think he lives on. anywny?"

"Why, on any of us little people he can catch," replied Peter promptly.

"Everybody knows that!" "Then everybody knows something that everybody doesn't know at all. That is the trouble with a lot of people—they think they know when they don't know. Now take the queer case of Buster Bear. Every one seems to think that because he eats a mouse or a rabbit or some other of the little forest people silly enough not to keep out of his reach, that he lives on them altogether, just as Old Man Coyote does. That shows how little some folks know about their neighbors. If Old Man Coyote should catch you. Peter, which I hope he won't, you would make him a good meal. But you wouldn't be more than a mouthful for Buster Bear. Two or three fat mice would do Reddy Fox for a whole day, but they wouldn't more than !-! tickle Buster Bear's stomach. Buster

are roots and berries and nuts and bugs and fish and frogs, and he has to have a lot of them. Where, pray tell. would be find them at this time of the year? He is just like Johnny Chuck. and Bobby Coon and the other sleepers-he'd starve it he didn't sleep,"

"Thank you, Prickly Porky," said Peter politely. "I've learned a lot. Yet even now I cannot help feeling that it is very queer that such a big, strong fellow like Buster Bear should sleep all winter, Anyway, I hope he has pleasant dreams,"

Who Was Who?

By Louise M. Comstock

ST. VALENTINE

QT. VALENTINE, in whose name expressions of sentiment have been exchanged since early Roman times appeared frequently in early church history, Monks or priests have been sainted under that name in France. Italy, Spain and South Africa, and It was given special significance in the Third century by a Roman priest noted for his good deeds and also by certain bishop of Umbria.

But a favorite legend identifies the saint who is responsible for our annual indulgence in lace paper, cupids and sweet ditties with a Roman youth of the early Christian era, who chose to be crucified rather than deny his adherence to the new faith. While lyingin prison awaiting execution, he fell in love with his jailer's daughter and left for her a farewell message signed "from your Valentine." Early rites in his honor are identified with the Roman festival of the Lupercal, in which suppliants prayed for success in mat-

Valentines in the familiar heart shape were commonly exchanged in England as early as the Fourteenth century, and St. Valentine's day is mentioned by both Chaucer and Shakespeare. Probably the earliest valentine in the English language was written in 1419:

This day Dame Nature seemed in love, The lusty sap began to move, Fresh juices stirred the embracing And birds had drawn their Valen-

ANNIE LAURIE

YT IS Annie Laurie to whom tourists pay reverence when they visit, in Forest Lawn Memorial park, Glendale. Calif., the reproduction of the "Wee Kirk in the Heather," the church the heroine of this oldest and sweet: est of love songs is said to have attended at Glencairn, near her Scottish home. But 'tis William Douglass, her devoted lover and author of the original version of the poem, to whom honors are due.

Annie Laurie, stripped of Douglass adoring poetry and the lilting music which we all know, was but a braw Scotch lassie after all, with a"rolling eye" and but little sense of duty Born in 1682, at Maxwelton house, Glencairn, she grew up to be the most charming and provocative young lady in all Dumfriesshire. How William Douglass felt about her he wrote down for all the world to sing. In spite, however, of her "promise true" of which he boasted in his song, Annie married one Alexander Ferguson while William was off to the wars. As the wicked often do, she flourished, even to her eighty-second rear

Douglass has been as unlucky as a poet as he was in love. Bereft of his Annie Laurie, he was eventually bereft also of his song. The original version had but two verses. The version familiar today is a modern adaptation by Lady John Scott.

"GRAVE ALICE"

TO HER friends Alice Longfellow Awas the "grave Alice" of her father's loved poem, "the Children's Hour," a thoughtful, widely traveled woman of unusual personal charm. As a young woman she attended Newnham college, Cambridge, thus becoming the first American woman to attend a foreign college. She was a member of the first class of Radcliffe, was among those whose vision and energy founded this "Harvard Annex" in 1379 as a four-year experiment in femining education, and was actively connected with its growth and progress until her death just a few years ago.

But Alice Longfellow couldn't have been such a "grave" little girl after all, for her father, who was already forty-four and famous when she was born and inclined to grandfatherly indulgence toward all his children, wrote of her just after her christening, "The brightest, gayest of girls, who enjoyed the ceremony as much as any of us," And it was Alice he used to tease with that little classic:

There is a little girl, who had a little Right in the middle of her forehead; When she was good, she was very, very

But when she was bad, she was (M. 191, Western Hewspaper Union.)

First Train Tunnel

The first railroad tunnel is the Woodhead tunnel, which was begun in the spring of 1839. The first train passed through December 2, 1845, This war over what was known as the Manchester, Sheffield & Lincolnohire rallway, now the Great Central division of the Loudon & Northeastern rall. Way.

World's Forest Area The present forcet area of the world, in round figures, is about 7,500. 000,000 scree, which is 22 per cent of the total land area, exclusive of the polar regions. The area of actually productive forest, however, is proably one-fourth less then this amount. or 5,000,000,000 sores, which is 16 per sout of the kind area.

Highest Happiness in

Labor Well Performed Today the most welcome word that can come to millions is a promise of employment—to have a share in the world's work. The song on which many of the older generation were brought up urged one to work in the morning hours, to work 'mid springing flowers, to work even through the sunny noon, and then on till the "last beam fadeth, fadeth to shine no more." But it was a joyous song, and the only unhappy note in it was the one that suggested the oncoming. of night, "when man works no more," The most fervent prayer that most men make, especially those who have not much goods laid up against days of ease, come from ancient times: "May I be taken in the midstof my work."

So far from work being a curse, Carlyle speaks of it as "the grand cure of all the maladies and miseries that ever beset mankind." It is the best physician. So in seeking to find employment for those out of work, the problem of misery is attacked at its root.

Skill in labor is man's highest vocation, but it is through labor of some sort, whether by hand or brain, whether of one's choice or by compulsion, whether as a vocation or an an avocation, that he finds his way to his better and best self.

"Giving a man a job is the best form of helpfulness, if he is still able

It has been often said that there is no good obtainable without labor; but it is better said that there is no good that is to be put above the ability and the opportunity to labor. -Kansas City Times,

News Review of Current Events the World Over

Representative McFadden's Violent Attack on President Hoover Stirs House-Chicago Wins the Republican National Convention.

By EDWARD W. PICKARD

WO Republican members of con-Frees from Pennsylvania-Reprementative Louis McFadden and Senator David A. Reed-stirred up the

L. McFadden

chairman of the house banking and currency committee, was especially bitter in his hour-long speech, asserting that Mr. Hoover had "sold out" the United States to "the German international bankers" whom he named as Kuhn, Loeb & Co., the Seligmans, Paul Warburg and "their sateliltes." He said the administration's course in working for acceptance of the moratorium was like "the ways of an oriental potentate drunk with power," He declared the President's unofficial poli of congress last June was "a crude attempt to usurp legislative power."

Representative John J. O'Connor of New York, a Taumany Democrat, Jumped to his feet shouting to the Republicans:

"It's my President as well as yours he's talking about, and if none of you will defend film from charges which are grounds for impeachment, I'm going to."

But Burnett M. Chiperfield of Il linois, Republican, was aiready up and his reply was vigorous and adequate. Said he:

"If" the gentlemen (McFadden) means what he says and if the gentleman is sincere, let him and his assoclates prepare articles of impeachment against the President of the United States and let those articles of impeachment be tried, and then the proof may be known, and let the gullt and infamy and horror fall where it may. The President of the United States would ask for such action, knowing that the truth and a fair incountry would vindicate him.

"Lacies and gentlemen, if there is ene particle of integrity in the statement the gentleman has made, let the gentleman presume proof of the charges. Let him show that we have a President who is unworthy of ocempying that high office or let him go from this chamber as a foul traducer of the character of an honest man,"

CENATOR REED, who has often been regarded as the spokesman \$558,000,000 or 53 per cent less than for Secretary Mellon, denounced what he called the propaganda by the international bankers to force cancellation for their own selfish interests. and he declared flatly that he was opposed to the revival of the war debt commission as proposed by the Presi-

"We have cancelled," he said, "all we are going to cancel: It is within the capacity of most of the nations of Europe to pay us the amounts they owe us, and as long as that fact stares us in the face it is theer imbecilly for us to be any more genecous than we have been in the past."

> Benators McKellar of Tennessee and Johnson of California followed in much the same vein and both declared' they would not vote even for the one year moratorium. The latter was before the house ways and means committee and Undersecretary Mills and Secretary of State Stimson both appeared before that body to urge rallfication.

OPEAKER GARNER and Senator Robinson announced that the Democratic joint policy committee had determined that the Hoover moratorium

was not a subject matter for party consideration and should be left open to the personal views of the Democratic members. The committee also decided that every possible effort would be made to reduce government expenditures, but did not reach an agreement on details with respect to the tariff or

fax revision, leaving these with other

The first bill to reach actual committee discussion in the senate was a written report to Chairman Beneone introduced by Senator Hale, to authorize building the navy up to the the holdings of foreigners in Germany London treaty limits.

meatters for future consideration.

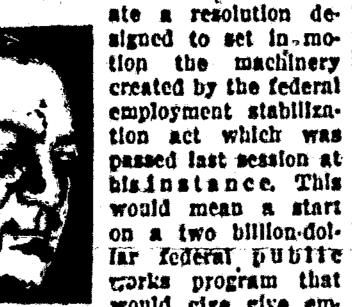

Organization of the schate was accomplished by the election of committee chairmen, but the deadlock over the choice of a president pro tempore was not broken. The progressives med to preside. One day the recalcle of December 31, 1930.

trants delivered their entire vote to Senator Vandenberg of Michigan, a regular who was a leader of the socalled "young guard" last session. But both Vandenberg and the young guard spurned this overture and continued to vote for Moses.

MICAGO captured the Republican national convention of 1932, the administration's alleged opposition to that city not manifesting itself. The national committee, presided over by Chairman Fess, listened to earnest arguments in favor of Chicago and Atlantic City, and on the first ballot gave 86 votes to the former and 14 to the latter. The choice was then made unanimous, Cleveland, Detroit, Philadelphia and St. Louis withdrew their bids before the balloting began, none of them having been able to raise the money for the convention expense. vention should be called for the are restored." 14th of June.

Chicago guarantees up to \$150,000 to pay for the expenses of the G. O. P. gathering, and her hotels have agreed to accommodate 3,500 delegates, alternates and newspaper men at rates of from \$1.50 to \$4 a day. The convention will be held in the new stadium, which can seat about 30,000 and which has ample accommodations for committees, etc. It has a contilever roof without obstructing pillars, a modern ventilating and refrigerating system, excellent acoustics and a fine pipe organ. The only drawback is the fact that the stadium is located on the West side, several miles from the hotels that will house the visitors.

DELIEF for the nation's jobless is still foremost in the mind of Senator Robert F. Wagner of New York. Last week he introduced in the sen-

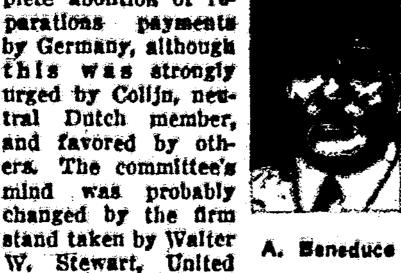

Sen, Wagner

bisinstance. This on a two billion dolfar federal public | ing large armies and navies." works program that would give give employment to thousands of men.

In the preamble to his resolution, Senator Wagner set forth facts and figures showing the gravity of the depression. After citing the numbers of unemployed, the many bank fallures and the falling off in production, he showed that the volume of construction for the third quarter of 1931 was for the third quarter of 1923; that the volume of building contracts awarded declined \$2,447,300,000 in the first nine months of 1931 below the similar period in 1928; that the volume of construction of public works and public utilities has fallen from \$1,039,043,000 in the first nine months of 1928 to \$3\$2,700,000; that the wholesale prices of building materials declined from an index of 82.0 in January to 74.0 in September, that money spent for relief in the larger American cities was in September, 1931, 142 per cent greater than in September, 1930, and in October. 1031, 113 per cent greater than in Oc tober, 1030.

VER in Basel, Switzerland, the Young plan advisory committee, of which Alfredo Beneduce of Italy is chairman, was said to have abandoned

any intention of making strong recommendations for the complete abolition of reparations payments by Germany, although this was strongly urged by Collin, neutral Dutch member. and favored by others. The committee's mind was probably changed by the firm stand taken by Walter

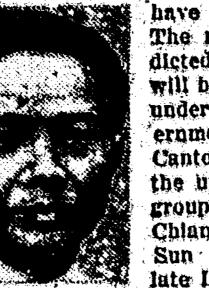

States member, against the scaling down of war debts, but Europe still hopes the American attitude will be more lenient in a few months. The advisory committee will merely report to the various governments the facts uncovered concerning Germany's capacity to pay, and action will be put up to the final reparations conference that probably will be held late in January.

A technical subcommittee submitted duce on German holdlugs abroad and with a view to establishing the net debt of the reich. The figures were

beld in secrecy. It was understood this subcommittee suggested it was impossible to uncover all German investments abroad opposing the re-election of Senator and Intimated that they were much George Moses of New Humpshire larger than the 9,700,000,000 reichs would not give in, and Mores contin- | marks listed in the Wiggla report as

I INDER pressure, Chiang Kal-shek finally has resigned as president of China, and with him Minister of Finance Soons and Foreign Minister

Wellington Koo also have stepped down. The result, it is predicted in the orient, will be a united China under a coalition government, with the Canton faction holding the upper hand. The group that overthrew Chiang includes Dr. Sun Fo, son of the

late Dr. Sun Yat-sen; O. C. Wu, former minister to the United Sintes, and Eugene Chen, formerly foreign minister. For the present Lin Sen, a veterun member of the Nationalist party, is at the head of the government.

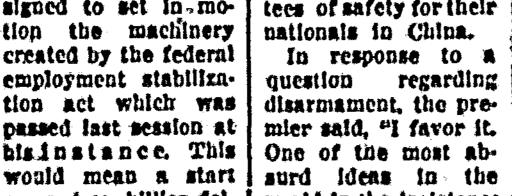

According to these leaders, the new government" will not longer rely so much on the League of Nations and will assume a much more vigorous policy toward Japan in the Manchurian dispute. This announcement may serve to quiet the Chinese students. who in their effort to bring on actual war with Japan have continued their riotous demonstrations in Nanking. Chlang Kai-shek explained his resig-

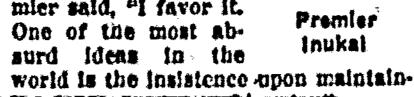

nation in the following statement: "I have tried to fulfill my obligations ever since I was made chairman of the National government in 1928. My comrades at Canton said they would come to Nanking only on condition that I resign. This means that The committee decided that the con- I I must retire before peace and unity.

> MUKDEN dispatches indicate that Manchuria will soon become autonomous, with Gen. Teang Shih-yi as its first ruler. The general has just been installed as governor of Fengtien province, of which Mukden is the capital. He replaced Yuan Chin-Kai, who was installed after the Japanese captured the city in September and was never considered more than a temporary figurehead.

> TAPAN'S new premier, Tsuyoshi Inukai, in his first interview declared Japan docs not covet an inch of ground in Manchuria but insisted

that Marshal Chang Hauch-liang must withdraw his army from the Chinchow. region. He said the Japanese demanded only their treaty rights, with guarantees of safety for their

He concluded the interview with the hope that the United States would soon get over its streak of thrift and "buy more allk-Japan needs the

The premier has appointed as foreign minister Kenkichi Yoshizawa, ambassador to Paris and Japan's representative at the meetings of the League of Nations council.

CHANCELLOR BRUENING'S gov-Cernment in Germany seems to be are generally used in Wisconsin, as secure until January at least, for the Socialist party in caucus decided to support him long enough to give him an opportunity to enforce the price reductions he promised in his emergency decree, If he falls in this, the Sociniists will join the Communist and Hitlerites in opposition and may overthrow him.

The reich authorities are working hard to uncover the facts in the Faselst plot against the republic which they believe exists. In reply to Bruening's threat to mobilize an army if necessary to erush the Nazia, Herr Hitler gave out a long letter in which he defled the chancellor, called his emergency worthless and demanded liberty and power for the Fascists.

D EPORTS of the royal mix-up in Rumania continue contradictory and confusing. The latest is that King Carol and Prince Nicholas have made up, that the latter has agreed to give up his wife, Jana Deletj, legally but only legally, and that he will therefore retain his royal titles and prerogatives and his military commands. So Nicholas and Jana will be merely companions, as were and are -Carol and Magda Lupescu.

D'NGLAND'S round table conference Lover the status of Burma promises to go the way of that concerning India. The other day three delegates representing certain elements in Burma withdrew from the conference because of dissatisfaction with the British statement of intentions to give Burma a constitution inside of which to become a self-governing dominion, The three delegates said they went to London with instructions from their priests to return immediately it any thing less than a full, immediate and responsible government was offered,

ILLINOIS Republicans are anxiously waiting to learn whether Ubited States District Judge James II; Will kerson will run for governor of that state. So far he is allent. Recently Judge Wilkerson called on President Hoover and it is said the President urged him to go after the governorship, predicting his election. The jurist, it is reported, would prefer to remain on the beach and to accept his stated promotion to the Federal Circuit Court of Appeals.

im, 1911. Western Newspaper Culen.

LARGER FOWL BEST TYPE FOR BROILER

How Feed Cost Can Best Be Estimated.

The cost of broiler production depends upon many circumstances to which a definite figure cannot be attached, since they vary with each case. About all that can be said is that broilers brought to 12 weeks of age and made ready for market will. if properly fed, have consumed from 8 to 10 pounds each of a well-balanced ration in the case of the larger breeds, like the Plymouth Rocks or Rhode Island Reds, about a pound less if Leghorns are used. .

Chicks hatched or purchased for broller production, however, should be of the larger type of fowls, the Rocks being as good as any. By ascertaining the cost of a growing mash for broilers, such as the following one from Cornell, you may figure the feed cost very closely. The mash mixture mentioned consists of 45 pounds yellow cornmeal, 15 pounds flour wheat middlings, 10 pounds wheat bran, 10 pounds fine ground heavy oats, 10 pounds dry skimmilk, I pound pulyerized limestone, and one-half pound fine salt. The cost of chick grains may easily be ascertained also,

Overhead costs vary with equipment, facilities and experience of operator of plant, but it should be said that experience is needed if winter broiler production is to be engaged in upon a considerable scale with any hope of satisfactory profit. This phase of poultry production presents problems of its own, proper feeding being but one among many,-Exchange.

Cleanliness Big Point

in Combating Disease Houses that are clean and properly ventilated are practically free from odor. Dropping boards facilitate remoyal of waste, which is a dally task in well-managed flocks. Droppings disseminate disease.

Worm eggs, cholera, typhold, and tuberculosis are also disseminated through infected droppings. Keep them away from the flock. Promptly remove suspicious, droopy fowls. Isolated fowls that have recovered should never be returned to the flock. Diseases are often perpetuated in the flock by this procedure.

Combat lice and mites by painting the roosts with alcoling sulphate. Floors of concrete permit disinfection. Dirt floors prove to be trouble makers. Keep the floor covered with dry. clean straw. Sanitary feed hoppers and water fountains are helpful in the prevention of discase. Pure water supplied in thoroughly cleaned containers prevents disease spread.—Successful Farming.

Hens Lose Their Job

Modern methods of batching chicks shown by a survey recently made by the department of agriculture and markets. Only 23 per cent of the chicks are now hatched by hens. Nineteen per cent are batched in home incubators and 8 per cent are custom hatched by commercial batcheries. Thus, the survey shows 50 per cent of all chicks are produced by the batcherics and that artificial incubation is increasing each year.

There are 100 hatcheries in Wisconsin with a total capacity of 5,000,000 eggs. There are 15,000,000 birds on the farms of the sinte, about 13,400,000 being hens and pullets,

Hens Worth Keeping

Keep the large, bealthy bens that have the abdominal capacity for production. If you are a little "rusty" on the factors to be considered in the selection of layers, write for the extension bulletin on this subject. Remember that all birds that are molting should not be sold. Keep those that are laying or that have molted in a comparatively short time and are ready to lay again. Birds that can molt and lay at the same time are usually very profitable birds to keep.

Tape the Turkey Toms

Adhesive tire tape wrapped about the legs and spurs of toms prevent injured backs in Mirs. Sam Owen's flock of 100 turkey hens in Medina county, Ohio. The tape is so wrapped that it passes around the front of the leg and over the end of the spur. Several thicknesses are used. Mrs. Owen says she never has had any trouble with the tape slipping off the end of the spur. No tom with spurs taped ever has injured a hen's back. Capper's Farmer.

Proper Nesting Space "A pest 14 inches square and 12

inches high is large enough for the average sized hen. An open nest is provided for every eight hens, but one for every five would probably be better at the height of the laying season. Plenty of nests prevent eggs from becoming dirty, cracked or broken. Bolled eggs cause a monetary loss in this country amounting to hundreds of thousands of dollars. Well-cured hay. chaff and straw make good nesting maierial.

HAILED FATHER OF GAME OF BASEBALL

Abner Doubleday Celebrated as Inventor.

Baseball has a picturesque vocabulary all its own, and when a world series is being played we expand this indefinitely. All season we have with us czars and moguls and kings of swat, but when Eurnshaw pitches such a game as his first in the world series he becomes, in addition to a big moose and a human scythe, many other strange and wonderful things. However, baseball has had one general who was that in both fact and afterwards, title, and was, hesides, the father of his country's national game. He was Maj. Gen. Abner Doubleday, officially recognized by the Spalding commission in 1007 as the inventor of the sport, and in whose honor recently has been held an informal celebration at Cooperstown, N. Y., where his way to Alaska with good roads all

a real general. He was a West Pointer and saw gallant service in the Mexican war and the campaign against the Seminole Indians. He fired the first Union gun at Fort Sumter, and at Gettysburg had just been given command of a corps that stemmed the first day's Confederate rush and made possible the alignmeut against which Pickett later charged gloriously but in vain. There is a monument to him near Cemetery-ridge and another in Arlington cemetery and a third at Cooperstown The latter proclaims, from its site on the original sand lot, that there; in 1839, was played the first game of baseball, "originated by Mal. Gen. Abner Doubleday."

Historians agree upon the glory due the man, but, as is their wont, differ as to the date. Some contend he was or should have been in the military academy at the time he was supposed to be making his bid for immortality, but the state of New York officially recognized 1839, and so the marker stands. The field is one for and against which much can be said. It is just off Main street and the villagers are able to hurry back to their stores and wait on chance customers between innings. The westering anh shines full in the catcher's eyes, but no perfect dlamond ever your wife how to drive?" has been built. Appropriately enough, Dr. D. L. Pitcher of Albany, N. Y. dug up the records that led to recognition of Cooperstown's almost forgotten glory.-New Orleans Times. Pleayune.

Old Timer Showed Boys

Old Game of Football Both on the stage and in the field of sport, there are those who long for the good old days and claim that the modern performance is but the shell of the real thing. This has been claimed more than once by old-time football fans and at Yale, for one, it is believed that the old-timers may be

It was the old, giant guard, Pudge Heffelfinger, who put doubt in the mind of Old Ell. He returned to the campus at the age of fifty and after watching the Yale varsity for awhile turned to Tad Jones, coaching at that time, and complained: "They don't charge the line properly."

"Well, why don't you go in there and show them the way you used to charge?" Jones suggested with a spile

"I'll do it," said the fifty-year-old Pudge, earnesily. He charged the Yale raralty line the way he used to when Vacation Land he was a guard, back in the good old Vacation Land he was a guard, back in the good old days and in a few minutes had ripped the Yale team to shreds and had Tad pleading with him to get out of the game before he ruined the team be-Youd repair.

The old boy, went away at last, mumbling that football had become a children's game. It is a maiter of record that he was never again invited to charge a Yale line.—Exchangé.

Wealth Put Into the Earth

The United States, with about 6 per cent of the world's population, uses approximately 10 per cent of the world's annual output of commercial fertilizer and ranks second only to the earthquake zone. Germany as a producer.

The world's annual production is worth \$502,235,000 on assumed values of \$100 a ton for nitrogen in the kinds of money." Iladiybent-"Yeak. warehouses of the producer, and a pennies, nickels, dimes, and quarvalue of \$50 a ton each for phost ters."

phoric acld and potash. The total amount of plant food used by American farmers increased 45 per cent from 1914 to 1928,

Supreme Sacrifice

A very gallant deed was performed by a chemist named Zurbriggen. He was employed at a chemical works in Switzerland. There was an explosion, and polson gas began to pour out upon the 20 men who were at work. Herr Zurbriggen, knowing only too well the penalty he must pay, forced his way into the room where the explosion occurred, found the leakage, and stopped it. All the workers were saved, through the swift courage of the chemist, but he himself was so severely gassed that he died soon

March to the Arctica

Summer excursions to the Arctic regions by airpiane and dirigible are promised for the near future, but it will not be so long before the automobile tourist will be able to make Doubleday laid out the first diamond. the way. The distance between As has been sald, Doubleday was Senttle and Fairbanks is a trifle more than 2,200 miles, and at the present time there are stretches of good roads for nearly 1,000 miles, so that there are comparatively small portions yet to be constructed.

EDITORIAL COLUMN

The New Year---What Will It Bring?

As we approach the incoming new year, we are prone to ask ourselves the shove question over and over again. Deplorable as the business situation is at the present time, we have reason to believe that the springtime will give us a revival. This conclusion is reached through for lowing the actions of the big fi nancial concerns over the country as they are making calculations on the how and wherefore of working out plans,

It does not require the effort of a master mind to see that bad as conditions are in this country, we are by far better off than any other country on the face of the globe. Where there is idieness, others more fortunate than their brothers are lending assistance in every manner possible to relieve the depression. Many causes are given for the past year's conditions. The Democrats are preparing to place the blame for everything on the Republican party, but this is not even good sense. It's just poor politics.

The facts of the case are that many, many things are to blame for the unemployment situation. chief among which is labor saving machinery. When we find that a certain machine will turn out several thousand more manufactured articles in three hours than one man would turn out in a week, we can begin to see how much that machine contributes to unemployment. This alarming output has glutted the country's markets and put the musses among the working classes on the road to hunt for employment of any kind, only to find that the same conditions are facing every line of industry.

The old year is dying-let die. New Year's sun has shone! on far worse conditions than lic. those with which we are now confronted, and the old U.S. A has pulled out of them, and will pull out of this before another year has rolled around. Thi depression will cause the master minds of the world to cease exerting energy and lay off on seeking ways and means to increase production, and bend its efforts to seeking relief for conditions which are the offsprings of inventive genius. We would not advocate the halting of progress, but something must be done in a reverse direction before the country is ruined by a selfish, over-zealous, plutocratic craze for gain, totally unmindful of those it deems helpless.

Lawyers in Juarez, Mexico, have been informed that the to itself. Unless taxation and Chibushus legislature has passed regulation are equalized for all a bill which permits divorce in forms of transport, the greatest one day when both husband and employer of labor and purchaswife street

Jack Dempeey, former heavyweight champion, is quoted by chempies.

Opportunity

Will the governor recognize opportunity?

The Need for Silver Stabilization

Many believe that because of shortage of metallic reserves for the world at large, silver should ve made legal tender as in China and more recently in Mexico, and that a world silver conference should be called to bring about an agreement to treat silver in a similar manner to gold as un addition to the present metallic monetary reserves.

They believe this action should wheat than was formerly required. not wait for action on war debte and reparations. They believe that atabilization of silver would ease gold to such an extent that England could soon return to the gold basis, which now seems far

One thing is certain—namely, I that permanent prosperity will not return until war debts and i reparations are settled and an adequate metallic monetary reserve is available for all countries, which is not the case today. - Skilling Mining Review.

The Public Interest in Railroads

The newly published book of the United States Department of Commerce contains an interesting diagram showing the digpossi of the average railroad dollar in 1930. Of this dollar, taxes took 6.6 cents; fuel for tocomotives, 5.4 cents; material and supplies, 18 cents, while into the pockets of labor went 44.6 centa.

No other illustration, perhaps, can so convincingly show the tie up that exists between the railroad problem and the general problems now affecting the pub-

Millions of men, women and children depend directly on the lar-von Kielst; as ensine, Olto cyrailroads. Millions of others indirectly receive part of their livelihood from the rails through gigantic purchases of supplies from other industries-purchases totaling more than \$1,000,000 000 a year. An appreciable part of our unemployment is undoubtedly due to the fact that railroad employment in now below normal.

The unregulated or partiallyregulated competing transport systems which have developed during the past decade, have caused a great decline in rall business. Here is something for the intelligent public to consider -not merely out of sympathy for the railroads, but in justice er of materials and supplies we have, may come to ruin.

THE MACHINE AGE SPOILS A PROPHECY

By H. L. RUSSELL

Advisory Council, Agricultural Commission, American Bankers Association. NOTED British scientist forecast A thirty years ago that by 1931 all available wheat land in the world

> would be under cultivation, and if the yields per acre could not be increased beyond that which then prevailed there would be a world shortage. The avcrase yield then was 12.7 bushels *** per acre. During the past seven years, the world

over, it has been H. L. RUSSPLL 14.1. On the 320,-

000.000 acres in cultivation this increase would amount to almost a half billion bushels more production than the world standards of thirty years ago. In place of dire distress due to shortage, we have had dire distress due to surplus.

Wheat farmers have shown no great inclination to curtail materially their output; perhaps a 10% decline compared with 70% reduction in atect. This unwillingness, or perhaps inability, to adjust production to current needs makes the problem all the harder to solve.

Not only are we now growing more wheat per unit of land, but noreage has been very greatly extended. In twenty years Canada has increased acreage 250%, Australia almost as much. Another significant fact is the materially lessened use of wheat. A much more diversified diet has developed. More vegetables and fruits are used than formerly. The reduction of 1.2 bushels consumed per person per annum since the last generation necessitates nearly 150,000,000 bushels less

Ever See a Soprame? When television comes we shall know whether the announcer le exegzerating when he grows ecstatic over the soprano's besuty .- Toledo Blade.

The Russian Effort Within the past two or three years another disturbing element has come into the picture. Soviet Russia is attempting a comeback fraught with possibility that cannot yet be fully evaluated. Russia is eagerly utilizing the very latest of scientific knowledge to enlarge her agricultural possibili-

ties. With feverish anxiety she is literally pouring millions into the expansion of her university research institutes, experimental stations and breeding farms. Her scientists are combing the earth for new crops and new methods. No country in Europe is manifesting more interest and activity in laying hold of the best science, wherever it may be found.

It is of more than passing interest that the wheat yields reported on the huge trust farm known as the "Giant" ran last year as much as 18 bushels to the acre. On this single farm the crop harvested is reported to have been 3,865,000 bushels: A single farm cf 427,000 acres under government control and mechanized as fast as human energy can be applied is a new factor in the world's picture.

There can be but little doubt that the Russian situation may yet assume quite a different attitude from what obtained even in pre-war days.

Ancho Notes

(Too late for last week) After an absence of more than two years, Mrs. J. M. Frame is home. She will spend Christmas holidays here, and then return to San Francisco, It is needless to say her many friends were overjoyed to see her again. She is a person who radiates happiness, and it is a pleasure to number her among our friends.

Mr. and Mrs. S. J. Pruett and son, J. A., spent Christmas in El Paso, guests of Mrs. Pruett's parents, Mr. and Mrs W. H. Grove.

Mr. and Mrs. H. L. Lamb, of Gran. Quivira, were week-end guests of Mr. and Mrs. Bryan Hightower,

Mrs. Bert Penix and her attractive young daughter, Mary Catherine, are here this week visiting in the J. M. Frame home.

Mr. and Mrs. Jess Linn, of Dill City. Okla., came in recently to visit the H. F. Goss family.

Allen Kile is here from Ari-

Mrs. C. O. Davis, of Carrizozo, was in Ancho Saturday attending the play put on by Duran people.

Mrs. Allen Kile was hostess to Ancho Bridge Club recently. During games mints were served. After the usual series of games, light refreshments were served High score was made by Grover Pruett. It was the first time in the history of the little club that a "more man" made high acore. Next meeting will he with Mr. and Mrs. Pete Frame.

On December 19th, the Ancho Woman's Club met with Mrs. S. J. Pruett, where a very good meeting was held. It was voted to help some of the needy in the community. The librarian reported that the book case was in. One feature of entertainment was a contest in which first prize Mrs. Birdie Walker, Noble Grand was awarded to Miss Lucille Drake. The Pruett home was prattily decorated in the Christmas motif, the main decoration being a gaily decorated Christmas Tree. Mrs. Pruett, the re-John E. Wright, Itiring President; was everything we could ask for in a clab presiident. Out of the twenty-four meetings held during the year, Regular meetings every Tues. | she missed only one, which is an exceptionally good record. She certainly had cooperation of the other officers and members. which was greatly appreciated by her, as was expressed in a brief talk which she made at the meeting. Delicious hot tamales, on the Cash and Carry Plan 75c in addition to other refreshments, were served, making a repast enjoyed by all,

> Raiph Hall, aludent in Carrizozo High School, is spending his Christmas vacation with home folks.

1932 License Plates

I have my headquarters at the Carrizozo Auto Company to dis: tribute automobile license plates for 1932 and I will greatly appreciate the favor if the people will purchase promptly so as to avoid a last - minute rush. Ex-New Mexico service men will please bring the necessary proofs of service and means of identification which will entitle them to regulation courtesies by the agent. Perry Sears,

A New Year—and a New Calendar?

Rop. Stephen. Porter and George Eastman with the 13 Month-Calendar

By ELMO SCOTT WATSON

NEW YEAR is at hand, bringing with it new problems to be faced, new ideas to be considered and new opportunities to be grasped or let alip. Will the new year see definite steps taken toward the adoption of a new ralendar, that schedule by which manking arranges his affairs?

Over in Geneva, Switzerland, an international conference is being held under the auspices of the Langue of Nations to

wrestle with the perplexing problem of calendar reform because it is felt that our present system of reckening the days of the year, with its ansoying irregularities and its shifting days, has cuttived its usefulness and is hampering human progress. This conference is participated in by representatives of both members and non-members of the League of Nations and should the representatives be able to agree on a new calendar, the next step will be the signing of a treaty which will require separate ratification by the different governments before the treaty becomes a law in each country.

It is the hope of the proponents of calendar reform that such a treaty and its ratification be secured this year so that calendar revision may become effective on January 1, 1933, which falls on a Sunday. If this hope is not realised calendar reform probably will be delayed six years, for a new year does not start on a Sanday again until 1969.

change have been submitted to the League of Nations but many of them are absurd on the face of them and others are too complicated or too revolutionary to have much chance for settous consideration. From present appearances the contest between all the different proposals seems to have almmered down to two plans and it is upon the merits of these two that the delegates to the conference will pass in making their decision. One is the proposal for an international fixed calendar, commonly referred to an the 12-month plan and the other is the world calendar, a revised 12-month plan.

The 12-month plan is the device of Moses R. Colsworth, an Englishmen who made calculat revision a subject of his study for many years.

During the Coolidge administration a national committee on calendar simplification was appointed at the request of the League of Nations to inquire into American sentiment on calendar reform. This committee, of which George Kantman, millionaire manufacturer of Rochester, N. Y., is chairman, made a survey and reported that "a large and representative body of American opinion"—particularly the business interests—recognises the grave defects" of the greent calendar and "demands" a new calendar—preferably one of 12 months, although the semantice does not recommend that the American delegates to the League of Nations conference be committed to any one plan.

Mr. Maximan has been the leading proposent to this remains of the 15 month plan which, to

ant & brieff, would

Make every month consist of four weeks.

Make every year consist of 13 months of 25 days each.

The additional month should come between June and July and be called "Sol,"

Every year there will be one day left over and this is to be considered apart, possibly as a

Every four years (leap year) there will be and there day to be disposed of in a similar manner.

The proposal of this plan has brought forth the following arguments in its favor:

All months have the same number of work-

All months have the same number of workdays, Shiurdays and Sundays and are directly comparable.

Each month has the same number of whole weeks. Fractions of weeks at month ends are eliminated.

The shifting of week-day names to different dates in every succeeding year and month is avoided. The fixing of permanent dates for public meetings, court sessions, educational schedules, etc., would be facilitated.

Periods of earning and spending would be coordinated; family and business budgeting would be simplified.

All months would be comparable without any adjustments being necessary for unequal number of days or weeks. Split-week payrolls would be avoided.

A great amount of clerical work would be eliminated, and expense saved, in the preparation of accounting and statistical reports in business, government, scientific, health and home affairs.

As there would be 13 monthly settlements during the year there would be a faster turnover of money; the same business could be handled with less money.

Monday, as now when it falls on Sunday, the anniversary dates not being changed.)

The 13-month plan would revise the calendar scientifically, completely and permanently.

The arguments which have been advanced against the 18-month calendar are these:

The number 18 is not divisible by 2, 8, 6, or 6.
The quarters of the 18 months year do not contain a whole number of months.

There would be 12 business closings instead of 12, involving increased bookkeeping.
In general, a greater number of adjustments in comparing past statistics and dates would

be required than in the 12-month system.

The introduction of a year of 12 months implies comprehensive change in long combined customs.

Superstitions regard for Friday the 18th, eccuring every menth, is difficult to overcome. It interrupts, eace a year and twice in least years, the regular occurrence of the 7th day Sunday of Subbath day of rest.

There would be complications and expense in-

Desirring that the international Reed nalender, or the 14-month plan, is too extreme for nation-

al and international adoption, a group of Americans organized as the World Calendar association, have offered the world calendar plan, a revised 12-month device. In its behalf they advance these 12 points:

1. The world calendar regulates the 12-month year. It is balanced in structure, perpetual in form,

2. All holidays are stabilized and placed on Monday whenever possible. Christmas remains the same as it naturally falls on Monday, December 25th.

3. Religious customs are respected and upheld with Easter failing regularly on an established date.

4. Astronomical conditions are recognized. It acknowledges the importance of the solar year over the lunar cycles.

5. The quarterly divisions of the year conform to the four seasons as they do now. This is important for agriculture and certain seasonable businesses.

d. The 12 months are multiples of halves and quarters. The equal quarters consist of 3 months; the first month has 31 days; the remaining two have 30 days. These quarters also comprise 13 weeks of 91 days, of which 13 days are Sundays and 78 are week days. Each month has 26 week days. Sunday is always the first day of the week, whereby the continuity of the week is maintained.

7. The odd 300th day of the year is interpolated between December and January: the 300th day of Leap year is set between June and July. These days are known as Year day and Leap day and have a week-day name, Saturday. They fall on the second day of the deuble Saturday, the last day of December and June. Year day and Leap day are designated as the second Saturday, December 30th, and the second Saturday, December 30th, and the second Saturday. June 30th, with the year-date following.

& January 1st and July 1st fall on Sunday, the first day of the week, and "wandering" Sunday is avoided. A regular rest day every week is vital for the welfare of humanity.

9. Only seven days are changed. Two days, the 20th and 30th in February, are added; the 31st day of March is taken away; to April is given a Sist day; the 31st days of May and August are eliminated; and the seventh day, the 31st day of December, is converted to Year day, an extra day, the second Saturday, December 30th.

10. The 12-month calendar is an economic miring; it does not add be existing expenses; neither does it call for an increase in labor. A chance of injustice through unnecessary tractions is avoided. All phases of living are not autordinated to commerce.

il. This calcular, which is regular in its system, contains a certain variety within each quarter division of the year. Thus it avoids the caland dried method of a fixed, mechanical plan by giving it a sexible regularity. This gives life to its nirecture.

12. In the world releader the revisions are ing ancient rules has returned from term; there are no Gracile referent and the northern Arisona with additional transition sate the new order is made pass by beans from the petilement of Graibi, the retention of the involve manths.

the let Western Propagat Balon.)

A Candle in the Wilderness A Tale of the **Beginning of New England** by IRVING BACHELLER

WNU Service Copyright by Irving Bacheller

THE STORY

Robert Heathers and William Heydon leave England in 1634 for the New world. They are welcomed at Boston by Rev. Docter Cotton and make acquaintance with Amos Todkill, veteran seldler and woodsman. Heydon falls in love with Elizabeth Brade. The young men settle down to the life of the colonists. Adverse comment forces them to dispense with their pretty cook, Mabel Hartley. Robert is smitten with Peggy Weld, who is engaged to James Rosewell, Mabel Hartley and a youth, whom she says was Heydon, are accused of adultery. Heydon and Heathers disappear. Heydon is apprehended and, refusing to talk, is found guilty. Heathers and Todkill head for New Amsterdam and suspicion begins to point to the former, Belief grows that Heydon is shielding his friend,

CHAPTER V-Continued

They lay motionless with strained ears. Soon they could hear plainly the stroking of at least a dozen paddles, then deep raucous voices that reminded the young gentleman of the grunting of swine. In a moment the fleet of canoes could not have been more than a bowshot away. Their luck was now getting its severest text. They could only lie still and await the losue. Robert felt a pain in the hand that held his paddle. His muscles were tense, and the pressure of his hand had increased with his peril. The sounds came nearer and suddenly began to recede in the distance behind them. The fleet had passed, bound for the east shore. Fortunately they had not come near enough to be visible. The sounds grow fainter and

Atson laughed under his breath and then whisperial: "The dovil and his dogs! Was ye skeered?" Robert answered: "I shook like a

were soon out of hearing.

shirt in the wind. Were you?" "Boy, I won't lie to ye. I was akeered to spit for a minute. I were a bit cold and I sweat like a pitcher full o' ice."

They put their strength to the paddies and in half an hour or so they saw a thickly wooded shore looming out of the fog. They made their way through dry dead timber to a landing. There they left the raft, but on their packs and pushed through a thicket and up a long tiant to the top of a | A Seething Broth and the Pot high ridge, above the mist, where a grateful breeze came out of the west. Near them a landslide had gone down the steep rock slope with an acre of timber in its arms. There they could look out upon a great spread of country covered with vari-tinted verdure. It is likely that no white man's eye. save theirs, had seen its wild beauty. Look there!" Amos whispered. No end to it! I reckon it's like it were when God divided the light from the darkness and set the stars in

Beaven." "And think of the strange wild beauty of this scene and for ages untold no eye to see it but God's."

Ames took his two books from his wallet. One was filled with notes and maps. He passed it to Robert, saying "Bit down here and read my dlary whiles I go on with the map in this other book."

So it befoll that Robert read the fall particulars of Todkill's meeting with John Samp. Amos had been thoughtless in the matter. For the young man now reading them, those pages were full of soul fire. A thing had happened which he could not have foreseen. He had never dreamed that Me going would put his friend in peril. Me had supposed that his disappearance would be accepted as a confesmon. The coat, the unexpected testimony of the woman and William's unaccountable wandering in the woods had defeated his purpose. He had

sense enough to hold her tongue. He mprawled on the ground writhing in distress of mind. Amos saw it and came to his side. "What's the trouble, boy?" he

felt sure that the woman would have

meked. "My friend-my best friend-le la dealer of the gallows. He may be deed now," Robert answered.

"Don't watery, To begin with, the word of a tipay constable is not worth eracked farthin'. I wouldn't give a menny's worth of the day for all his talk. If William is convicted, why does he come after you? But suppose that Samo told the truth, they will not henr Willem." "Why?"

"They don't believe he did th That's why the court has sent for you. They may you must be the guilty man or ye wouldn't have you away on the inverse able. You've get the repubotton o' boin' a devil with the gale. I don't know how ye got it. Probably I have Dally News.

from the busy tongues o' the women. You like a joke better than mutton. William is straighter-faced. He can laugh, but he looks and talks more like a godly man. Every one likes him. He's as friendly as a house cat. He's round and you're four-cornered. Folks may like ye or not. The whole town is sure that he is not guilty and that you be. That's why the old tub Samp come up the shore to nall us. You needn't worry bout. William, They'll never hang him. Too many friends amongst the great men. There's some that's harm-proof. He's one of 'em."

These words were a comfort to the young man.

"I don't know what to do," he said, "We cannot go back."

"Back!" Amos exclaimed, "Hell's griddles! No! I'd rather try dodge the Mohawks—thick as files in midsummmer, savage as a hear with cubs, and get to some Dutch town. We've had luck in gettin' here. We'd never get back, I reckon we'll make the big lake in two days and a sleep. In this moon I feel the suck o' the south on me. We'll try our luck in the Mohawk country. There's water most o' the way down to the big Dutch island. If ye take my advice ye'll keep away from the colony leastways till winter weather has cooled 'em off. I reckon we better take a ship for Holland if we can sneak through,"

a change to get through," said Robert, "I wish we had tried the sea." "Ye might as well sing a psalm over

"We'll go south, if you think there's

"I Am Myself Convinced That He is Guilty."

get out o' this puppy snatch. Don't

worry." relish for adventure to a stern-faced | Brades took a ship for England.

"Come on," he said. "We'll take another shoemaker's holiday,"

. CHAPTER VI

That Held It

Robert Heathers' concern for the safety of his friend William was well founded. Nearly five weeks passed. The constable had not returned. Word came that his overturned shallop had been discovered and that Samp was drowned. Heathers had got away. The riffraff was laughing at the court, declaring that the law was only for the poor. Everywhere, except with Sir Harry Vane and the Lady Bess, feeling ran high against William Heydon. He felt it in his prison.

William wrote to Roswell Brade offering the Lady Bess her freedom and even urging that she take it.

"I can never love another woman," he wrote, "but it may be that she canlove another man. She was born for happiness, and it is her duty to find it." Brade came to see him and asked him pointblank for the trath. Wil-

liam did not answer the question. Returning from the prison, Mr. Brade called his wife and daughter into council. He said: "The more I atudy the matter the darker it becomes. William will give me no light. Why? If he is innocent and is trying to shield his friend Robert Heathers, why can be not confide his secret to me? He should know that I would

not beiray it. The posture of the case is critical. If he confessed now he would go to the gallows. He may go to the gallows without confession. These magistrates are stern men. have conferred with one of them today. He feels that their evidence warrants the pain of death."

"I say again, steadfastly, that I believe him innocent," said Bess.

"But you are almost alone in that I am myself convinced that he is guilty. We are humiliated by our association with this man who, if he is not guilty, does not trust us with the truth. Guilty or innocent, as I have said before, he is disgraced. There is but one thing for us to do. We must get away from these troubles and go back to England for a time. You and your mother are in such a nervous condition that llving with you has become a burden. We must get away from these deplorable excitements or we shall all be dead,"

For a time the girl stood against these convictions renewed and amplifled day by day for a week. She called Sir Harry Vane to her aid but to no avail. Her father would not be persuaded by his arguments. Roswell Brade was an able and a stubborn gentleman. He appealed to her pride and her sense of gratitude. He was slow to use his authority as the head of the house, and it must be remembered that in the Seventeenth century it was a power to which women were wont to yield without question. They It is twofold: might think of independent action, but if so they did it secretly. .

Bess had to yield at last, and so it came about that this letter was written:

"My dearest: I love you. As long as I live I will love you, yet our ship is wrecked. Its freight of happiness is fost. If I could have my way I would stay here and do what I can for you. But you give me no rock to stand upon, and I am nearly drowned in these chilling waves of opposition. We get no assurance from you that the disgrace you suffer is undeserved. Mine are a proud and stern people. What have I to sustain me in opposing them save my faith in your Your words to me-how are they to be interpreted? What can I do but bend to the will of my parents and return to my home in England and cherish a memory of days and of a face dearer than all others? I cannot blame my father, for when I search by own heart I find in it a degree of pride. It is a thing born in me. I cannot help it. If it be wrong, I ask my God to forgive me. I ask also that He will give you strength and comfort according to your need.

"Sincerely your friend, "Elizabeth Brade,"

Thus gently and truthfully the Lady Bess broke with William Heydon and surrendered when the battle was by no means lost. However, it must be said that she could not foresee what was coming. William laid no blame The old ploneer had a different sort I upon her. He knew too well the pride of comrade to deal with now-one of the born aristocrat. She had rewho had suddenly changed from a laisted it for a time but it was bound confiding youth filled with a boy's to have its way. Soon after the

Meanwhile the clamor of the people for justice grew. Something had to be done. Again William faced the stern magistrates. He only asked for In him. mercy and refused to plead. He would neither deny nor amon his rull. The magistrates were confronted by a new and a highly serious problem. In England the penalty for refusing to plead had been the pressing machine designed to convince the felon of his error or, failing in that after a severe pinching, it proceeded to destroy him. No enlightened person in the colony could countenance that kind of practice. Was not the presser a tool of the spirit from which they had fied? Indeed certain of their kin had auffered death in its embrace. The magistrates retired for deliberation. The evidence was in their view conclusive. A sufficient majority agreed that the They returned to deliver their verdict. Sir Harry Vane was in court. He saw in their faces the doom of the prisoner. He consulted a moment with Winthrop and Dudley, who entertained a high regard for the baronet. His handsome face and figure, his magnetic personality, his brilliancy and good sense, together with the prestige of his family and the eminexes of his father had made him a power to be reckoned with in spite of his liberal Puritanism too advanced for the taste of certain churchmen. Even the fishermen took off their hats in-his presence, while goodmen and gentlemen agreed that he should be the next governor.

Lesson for January 3

THE SON OF GOD BECOMES MAN

LESSON TEXT-John 1:1-18. GOLDEN TEXT-Jesus saith unto him, Have I been so long time with you, and yet hast thou not known me, Philip? He that hath seen me hath seen the Father; and how sayest thou

Live on Earth. JUNIOR TOPIC-Jesus Comes to Live on Earth. INTERMEDIATE AND BENIOR TOP-

PRIMARY TOPIC-Jesus Comes to

then, Shew us the Father?

IC Seeing God in Jesus. YOUNG PEOPLE AND ADULT TOP-C-The Fact and Meaning of the Incarnation,

The lessons for this quarter are taken from the Gospel of John, giving an opportunity for the presentaition of this great message from God. In order intelligently to present the lessons of the quarter, the teacher must get hold of John's central purpose and bend every lesson thereto. Happily the writer has plainly declared his purpose John 20:30, 31.

To prove that Jesus is the Christ, the Son of God.

2. To show that eternal life is to be obtained through faith in him. With this twofold objective, John proceeds lawyer-like to lay down his

propositions and to introduce his witnesses one by one in their establishment. The section for today's lesson is commonly called "The Prologue." 1. The Pre-existent Word (vy. 1-4). The eternal Son is called the Word

of God because he is the expression of God to man. He is the one who utters to men the Father's will. God has in these days spoken to us by his Son (Heb. 1:1, 2). Observe: 1. The son is a person separate and

distinct from the Father (v. 1). There is at the same time an inseparable union existing between them. .

2. The Son is eternal (v. 2). He was with God in the beginning. He did not begin to exist when the heavens and the earth were created. neither did he become the Son at his baptism, for he was before all things (Col. 1:17).

3. The Son is divine (v. 1). "The Word was God." He is a being equal with God and one in essence with him. 4. The Word of God is the omni-

potent Creator (v. 3). By him were all things made, the world and all things therein. This refutes the gross error which postulates the eternity of

- 5. The Word is the source of all 1110 (v. 4). 6. The Word of God is the light of

men (v. 4). Man's power to reason has come from Jesus Christ. The very faculties which the skeptic uses in his attempt to destroy Christ's work in the world have been derived from Christ. The conscience has its source

II. The World's Attitude Toward the Word of God (vv. 5-13).

1. Men are insensible to the presence of the true light (vv. 6-10). So dense is the ignorance of mankind that the presence of the very Lord of Glory is unrecognized. Being thus unrecognized. God, in his grace, sent John the Baptist as a witness that all men might believe (vv. 0, 7). Man's ignorance can only be accounted for by the mallelous blinding of his mind by the Devil (II Cor. 4:4).

2. The desperate wickedness of man's heart (v. 11). The Word was rejected by the chosen nation. They would not receive the one whom God had anointed to be their King. With prisoner should die on the gallows, the self-revealing light, the earnest testimony of John the Baptist, and the glorious privilege of becoming the sons of God, the rejection of Girlst most certainly reveals the awful perversity of the human heart in its natural state. "To be carnally minded Is death" (Rom. 8:0).

3. Some received Christ and thus became sons of God (vv. 12, 13). In this section we are shown how men become children of God. It is not by blood relation with the covenant people, "of blood" (grace is not inherited); not by the efforts of our natural hearts, "the will of the flesh"; nor by the acts and deeds of others-"the will of man; but of God."

III. The Eternal Word Became in-

carnate, "Made Flesh" (vy. 14-18). the enternal Word became the incarnate Son. The eternal Son of God became man, born of a woman. The "flesh." He designated himself "the Son of Man." He became really human, The eternal personality did not cease or become modified in any way when he entered upon human relation. The human and divine matures were united in one person. This incarnate Son of God tabernacled among us.

WORDS OF WISDOM

.Ignorance is "darkness," education is "light."

God's "minorities" will overwhelm the devil's "majorities." Sin is "international," "interdenous.

national," and "nonsectarian." "When every other way of secape from temptation seems closed, try the

gate of praise."

by artificial mease. The human animal is not the only greesive methods.

About Ourterr

Anatomy of the Oyster.

Washington, D. C.)-WNU Service.

HIB Chesapeake bay oyster

grounds are today resounding with the clank of thousands of oyster tongs, and tons of oysters, destined to satisfy man's craving for the luscious bivalves, are shuffling into the holds of the day's oyster neer Oysfers are the most popular and most extensively enter of all shelifish; economically, they are the most important of all cultivated water products and, with the single exception of the sea herrings, the most valuable of all aquatic animals.

In at least thirty-five countries oysters support a special fishery, and in various other countries enter into the food supply. On the shores of all the temperate and tropical oceans and seas, oysters occur in greater or less abundance: but the supply in the North Atlantic exceeds that of all the other waters combined. Not less than one hundred and lifty thousand men and women are engaged in the oyster industry: and the capital invested in vessels, boats, apparatus, oyster lands, and cultural establishments aggregates many million dollars.

. The oyster crop of the world amounts to over twenty-two million bushels. Of this output the share of the United States is 70 per cent. Of the remaining portion the greater part

belongs to France, Oysters produce an immense number of young in order to compensate for the heavy mortality that occurs at all stages of growth, but participally in the early months. It is an astonishing fact that in some species of oyster each sex is represented by a different individual, as in the oyster of the Atfantle coast of North America; while in other species both sexes are united in one individual—the male stage alternating with the female, as in the common oyster of the Atlantic coast of

After the oyster attains a size that is visible to the unaided eye, it is incapable of changing its position. This is in marked contrast with the newly born young, which is a free-swimming creature, floating about with tides, and | by the oyster is seen in the facts (1) currents, and quite as likely to settle | that it is taken in every coastal state down on a far-distant bank or bar as to rejoin its progenitors.

How the Young Are Saved.

Europe.

Of the millions of microscopic young liberated by a single full-grown oyster, only an exceedingly small percentage become attached to a sultable bottom. form a shell, and enter on a career that will terminate on the table in two to four years. When the 'temperature, density, tides, and currents are favorable, the young will settle on an existing bar or bed, covering the shells of the old oysters and any other hard substances or objects that may be present. All the young that fall on a muddy or soft sandy bottom, or on surfaces that are alimy, are lost. Oyster culture therefore aims primarily to conserve the free-swimming young, which it accomplishes by sowing clean oyster shells or other "clutch" to which the "spat" can attach, or by collecting the young on tiles or brush raised above the bottom or suspended between surface and bottom.

Oysters have been under culture longer than any other shellfish and, indeed, than any other water creature, A simple type of cultivation, with the formation of artificial beds, flourished in China at a very remote period and probably antedated by some centuries the inception of oyster culture in Italy. about the year 100 B. C. With the ailvance of civilization and the increase in population, oysters were in greater In these words we are taught that | demand and of necessity came under cultivation in all the important maritime countries of Europe, where, at the present time, fully 90 per cent of the eternal Son did not become a Jew, but | output represents oysters that have undergone some kind of culture. In other parts of the Old world the growing of oysters by artificial means has become an important industry, while in the western hemisphere oyster farming has progressed to such a point that the annual crop now exceeds the total product of the rest of the world.

Oysters are thus become the most extensively cultivated of all aquatic animals, and the yearly product of the oyster farms is many times more valwable than that of all other aquicultural operations combined.

Has Hordes of Enemies.

The cultivation of oysters is made necessary by the exhausting of the natural beds; it is made possible by private ownership or control of cyster-producing bottoms; and it is greatly facilitated by the peculiar susceptibility of

(Prepared by National Geographic Society. one that looks with favor upon the edible-qualities of the oyster. At every stage in its career it is attacked by a horde of dangerous enemies, some of which are most destructive after the oyster has put on its stoutest armor, and would seem to be almost invulnerable. Before it becomes attached, the delicate oyster fry is extensively consumed by adult oysters and various other shellfish, as well as by fishes like the menhaden, which are able to strain their food from the water. When the oyster attains its shell, a new set of shelifish enemies, provided with drills, begin their attacks and extract the soft. parts through minute holes made h) valves.

The oxster growers of Long Island sound and adjacent waters suffer large losses from the inroads of starfishes, which come in from deep water and move in waves over the bottom, devouring every eyster in their path and sometimes destroying several hundred thousand bushels of marketable .oysters in one state in a single season.

Other enemies of the grown oyster are fishes with powerful jaws armed with crushing teeth. On the Atlantic coast the most destructive fish is the black drum, a school of which may literally clean out an oyster bed in one night. On the Pacific coast a species of stingray is the chief offender.

Further damage is done to oysters by the encroachments of mussels, barnacies, sponges, etc., which sometimes occur so densely on the shells as to cut off food and oxygen and thus greatly retard the growth of the oysters.

In any consideration of the world's oyster industry the United States necessarily receives first and most promtnent mention, for there is no country -In which oysters occupy a more important place. The output here is larger and more valuable than elsewhere, and the relative importance of oysters compared with the total fishery product is greater. Furthermore, among the leading oyster-producing countries the cost of oysters to the consumer is least and s the per capita consumption is greatest in the United States. Additional evidence of the conspicuous position held except one: (2) that in fifteen states it is the chief fishery product, and (3) that it is the most extensively cultivated of our abuatic animals.

Great Industry in America.

The annual oyster output at this time is about 17,000,000 bushels, with a value to the producers of nearly \$13,000,000. The yield increased 70 per cent in quantity between 1880 and 1912. During the past decade there has been a slow decrease in the size of the crop. The limit of production has perhaps been practically reached in certain states, and in most states the industry is capable of great expanalon. In recent years the South Atlantic and Gulf states have experienced a noteworthy augmentation of yield as a result of increased appreclation of the oyster resources and increased encouragement given to oyster culture.

The seven leading oyster states at this time are Rhode Island, New York. New Jersey, Maryland, Virginia, Mississippi and Louisiana in each of which the production ranges from a million bushels upwards. Maryland is the ranking state.

The rank early attained by the United States in the oyster industry was due to the great area of the cyster beds; but the maintenance of that rank depends on the general adoption of oyster culture as the only certain means of insuring a yearly increasing crop that will keep pace with the increasing demand.

Of the oyster markets last year, 50 per cent came from private or cuitivated grounds. Owing, however, to the improvement in the quality and shape of oysters by cultivation, the product of the private beds represented 70 per cent of the total value of the yield of market systems. While the quantity of oysters taken from cultivated grounds in the United States is larger than in all the remainder of the world, yet the proportion of such oysters to the total output is much smaller than in any other Important oyster-producing country.

Wherever the fishery is active and the demand great, the necessity for artificial measures to maintain the supply sooner or later becomes manifeet. Some of the states long since ceased to place reliance on materal beds as sources of supply, and escourared eyster culture by leasing or sellling all available grounds to prospecoysters to increase and improvement 'tive eyster farmers, and each year other states are falling in line for yes-
