PRICE \$2.00 THE YEAR

Diamond Dust

By Joe Chavez

	Won	Lost
Carrizozo	9	4

Dividing a twin bill at the local park last Sunday afternoon, Manager Bamberger's Legionnaires annexed their ninth victory of the season by taking the (would-be) Alamogordo Black Giants into camp by a score of 9-to-6. The Giants had called up Saturday that they would be unable to fill the appointment here Sunday, so Manager Bamberger got busy and negotiated with the local CCC Camp personnel, for them to put a team of "Slashes" in the field as a substitute for the Alamo darkies. Since the unfortunate death of Smoky George Fritz, their ace pitcher, the Giants seem to have lost their footing and are badly discouraged—but it's not the case with one of those Snowballs. At the last moment, he combed Alamogordo and succeeded to round up a team of Spanish-Americans to come over and help him keep the engagement. To the majority of the fans, this brave, little Snowball was quite discernible, but to a certain little boy all looked alike, when he said to his mother: "Mother, that's the blackest nigger in the bunch."

The Carrizozo-ans used no exertion in disposing of them, for those boys were no match for our team. Red Huffmyer was the moundman for Carrizozo, with Chavez and Tony taking turns behind the bat.

The nightcap was a family affair between the Legionnaires and the Triple C's, but this domestic event reverberated with thrills and lots of good plays by both sides, the CCC having an edge from the fact that the Legion boys' interest had waned from the inactivity of the first game and naturally, were somewhat fatigued. Andy Lucas pitched for the town boys and Cox caught. We have to hand it to our neighbor boys for their clean and alert playing, both afield and at bat. Those lads were wide awake at all times, and we want to give special mention to their hard-working battery, Najjar, pitcher, who hails from San Antonio and Hill, the catcher. These boys made our murderers' row bite the dust at very crucial times, when hits would have meant runs. Tony Perez, who is a member of the camp, played with those boys and to add insult to injury, he poked one of Andy's pitches for a homerun. The score was 6-to-5 in favor of the CCC.

"Di-Maggio" Marquez was shifted to shortstop and Frank Vega played the keystone bag. Johnny Walker and Pruett umpired the games.

If you don't want to miss a couple of good games, come out Sunday when the Rio Grande Sharks from Socorro defeat our local diamond, and on the following Sunday, Aug. 21, when the Hy-way team of El Paso plays here. Both are tough oppositions.

The family croquet court at the Joyce residence is attracting much comment. Members of the family and neighbors assemble every evening and enjoy the game under big flood lights.

LYRIC THEATRE

(Air conditioned)
R. A. Walker, Owner

Friday and Saturday—
"TEXAS TRAIL"

"Hopalong" and his pals, Windy, Lucky, Boots and Smoky hit the trail to find 500 head of wild horses for Uncle Sam's Army, only to be hi-jacked after their herd is complete.

—and—
Betty Boop in "Little Lamsky" and "Mule Heaven."

Sunday, Monday & Tuesday—
Ann Sothern, Jack Haley, Mary Boland, Edward Everett Horton and Walter Catlett in—

"DANGER! LOVE at Work!"

The story is about a lawyer who sets out to get signatures from a crazy family, by way of negotiating a purchase of their property, and his romantic attachment for the fairest of the lot.

—and—
"Sandy and the Goose" and "My Kingdom for a Home."

Wednesday and Thursday—
Carol Lombard, Fred MacMurray, Una Merkel, Porter Hall and Edgar Kennedy in—

Popeye in "Let's Celebrate" and Popular Science.
(Cut out and save for reference.)

BUSINESS MEN'S CLUB

Met Wednesday at its weekly business session and 6 o'clock dinner at the S. P. Hotel. In the absence of Pres. McQuillen, Vice-Pres. Carpenter presided with Dr. Blaney as secretary. The round-table speaker of the evening was Manager Peterson of the hotel, who told of the many things of interest connected with the pleasure trip he took with Mrs. Peterson and daughter Doris to northern Michigan, where Mr. Peterson was born and reared. His talk was extremely interesting and among other features of the discourse, he pleased angler members of the club who listened to his tales of catching some wonderful fish.

In view of the coming program to be given at Community Hall by the Capitan Girls' Camp, Aug. 15, the club decided to sponsor the affair. Mrs. Mims, musical supervisor of the camp, will direct the program. Adm. 15-25c. A delegation from the club will wait on Gov. Tingley in regard to road matters on August 20.

Ray Sipple and D. L. Jackson were here from White Oaks yesterday. Ray is here from Colorado where he is engaged in the mining game. Ray looks well and his family send their best regards to friends here and at White Oaks. Ray managed the White Oaks baseball team a few years ago and it was a good one.

George Koyoi, Night Yardmaster, was on the day shift, relieving Day Yardmaster and Mrs. Jesse Snyder, who had been on their vacation.

I. O. O. F. Notes

At the regular meeting Tuesday night, in the absence of N. G. Colonel Jones, V. G. Bradley Smith occupied the chair in a creditable manner. The new officers who have been lately installed are: N. G. Colonel Jones; V. G. Bradley Smith; Sec'y, W. J. Langston; Treas., L. H. Dow; Warden, H. Barnes; Chaplain, Stephen Bostian.

J. F. Petty, M. G. Peckham and Walter Riggs were in El Paso yesterday on business.

House & Son of the El Paso-Arizona Truck Co., were here this week, looking over their business affairs.

Mr. and Mrs. E. L. Kidwell of Ancho returned this week from a visit to Carlsbad Cavern. He left again yesterday for the S. P. Hospital in San Francisco, while Mrs. Kidwell remained with relatives at Santa Rosa.

Ralph Petty, Buddy and Ruth Peckham were in Tularosa Wednesday night to see Jane Clayton who was a guest at her home town. Her picture was on the screen and Miss Jane appeared in person during a big rally in her honor.

The new filling station across from the postoffice is rapidly nearing completion. We are informed that the new manager will be Ted Purcey, everybody's friend.

The Misses Nina Trieg, Edna Tregillos and Mr. McCune, all of Pratt, Kans., were week-end guests of the R. E. Lemon family. While here, Mr. and Mrs. Lemon took them to the scenic resorts in the surrounding mountains. Before coming here, they visited Carlsbad Cavern and other places of interest in our section of the state. The above ladies and gentleman are cousins of Mr. Lemon.

Mesdames Ola Jones, Nellie Branum, J. E. Hall, R. E. Blaney, R. E. Lemon, and F. E. Richard were business visitors at Roswell Monday.

Mrs. H. C. Goldston, the children and Bud Goldston visited relatives at Petersburg, Texas, last week.

Hiram Dow, lieutenant-governor, is out for the nomination for Governor, but when he comes to Lincoln County to solicit support, he should tell the people why it was that Gov. Tingley left town and left the Lieutenant-Governor to commute the sentence of Hollis Martin from the "hot seat" to life imprisonment. When he comes this way, the framed-up story would look well in print and in the associated press dispatches.

Mr. and Mrs. Henry McFadin, who ranched in this locality for many years, are now in Lon.

Julia Romero, Weather Observer.
The interior of the Star Cafe Bar is undergoing remodeling and repairs this week. The place has been enlarged by the removing of a portion of the partition.

The attention of readers of this paper is called to the weather reports coming from the office of Weather Observer Miss Julia Romero. They are published each week on our front page. Those interested in weather observations would profit by cutting them out each week, pasting them in a scrap-book, and keeping for future information and comparison.

Mrs. R. T. Lucas, who visited her parents, Mr. and Mrs. A. L. Burke and brother Lewis for a week, left Monday for Albuquerque, where she will be the guest of Mr. and Mrs. Phil Bright for about ten days, when she will return to her home in Kansas City by airplane on the Lindbergh Line.

Harry and Cap Straley and Bill Balow of Ancho were business visitors in Carrizozo Saturday of last week.

Contractor Johnson of Capitan is plastering some apartments on the upper floor of the Carrizozo Hardware Co., with Joaquin Ortiz as helper.

Mr. and Mrs. C. C. Hurst of McAllen, Texas, are here for a short visit while Mr. Hurst is on his vacation. Mr. Hurst is Collector of Customs at McAllen, and Mrs. Hurst is a sister to Walter and Roy Grumbles.

Mr. and Mrs. T. G. James of the Kudger ranch near this place, were visitors in town this Tuesday.

Joe Navarro put on new roofing on the primary school building and residence on the east side this week.

Grocer Jeff Herron returned the first of the week from Dallas, where he visited Mrs. Herron and children.

Mr. and Mrs. Jack Cleghorn of the Cleghorn Dance Hall of White Oaks were visitors in town Saturday.

The Lincoln County Frontier Days celebration will be held in Carrizozo, Sept. 16-17, sponsored by American Legion Posts of Carrizozo and Capitan.

Out-of-the-Ordinary

A. L. B.

It was Sunday morning and as usual, the Sam Bradford family of Detroit, Mich., slept late. At about nine o'clock, they were awakened by a low, mournful sound coming from the front yard. They heard it again and again. The oldest boy, John, was the first to dress and going out, found a large gravestone standing erect on the lawn. The headstone bore this inscription: "Theresa Hoffman, died Nov. 21, 1901. Aged 72." Police removed the stone and took it to the station, but all efforts to find any name on the records of the city which would correspond to that on the tombstone, were fruitless.

A certain San Antonio, Texas, lady has a pet dog which has for the past two weeks, brought her a one dollar bill every day. Each afternoon about 8 o'clock, the dog comes home with a bill in his mouth and allows no person to take the money but his mistress. His nose is always covered with dirt which shows that he had nosed the money out of the ground. They have followed him and watched him, but without success.

Alex Martinue, 58, merchant of Havre, France, did all of his bookkeeping after closing time. One night after locking his doors he seated himself to go over the day's accounts. It was a very hot night and Alex grew sleepy. He tried his best to keep awake but failed. His office being near the sidewalk, people could hear weird, gruesome sounds coming from the room and they soon attracted a crowd. Someone said: "He has been shot by a burglar and is dying." Others thought he was ill and needed medical attention. The sounds continued but were caused by Alex's snoring. Police finally broke the door in. Alex awoke, grabbed his gun and fired shot after shot into the crowd, but they went wild. The police wrestled with him, the crowd broke up all his furniture, Alex sustained a broken arm, his nose was mashed and he was taken to a hospital where he remained near death for six weeks. When able, he sued the city for damages and the court granted him \$2,000.00 damages. Moral: Be careful—don't snore too loud!

It was over one year ago, that Mrs. Nellie Mitchell of Pittsburgh, Pa., looking out of her window one morning, saw a featherless, helpless young pigeon fall to the sidewalk from its nest. She went out, picked it up, took it home and fed it with an eye dropper until it grew feathers and strength. Then it flew away, but since that time, every morning, "Pete," as she had named him, appears at her window and makes such a fuss that she lets him in for his morning bath and breakfast.

Warren DuBois of Los Angeles is a stamp collector. The

Personals

Our old friend Engineer Bert Holland came in on his run from Tucumcari Tuesday and as is his usual custom, made this office a pleasant call.

Sat Chavez, Jr., and his orchestra played for the dance at the Maes Hall in Lincoln last Saturday night.

The new Paden's Drug Store is being remodeled in up-to-date fashion. The "Three Musketeers," Red, Buddy and Shorty, are on the job and business is constantly increasing.

This office is in receipt of a letter from Mrs. Corda Green, formerly of Corona, but now residing at Dallas, Texas. Mrs. Green lived in Corona when the late George Roberts, who was so cruelly killed at Ancho about three weeks ago, was proprietor of the local drug store at that place. She wants the Outlook sent to her address beginning with our issue of July 29, containing the account of the killing of George and Edward Ferguson.

Arthur Cortez, the genial agent for Refrigerators, Radios, Washing Machines and Electrical Supplies, was here from Fort Stanton last Saturday on some business.

Mrs. Alvin Carl left last Saturday for Hot Springs for a week's visit with her parents, Mr. and Mrs. Thomas Wallace.

Miss Pearl Goldston of Petersburg, Texas, sister of Miss Lettress Goldston, clerk at Burke's Art & Gift Shop, is here, accompanied by her cousin, Charles Goldston of Abernathy, Texas.

Mr. and Mrs. Tennis Smoot attended the Tucumcari Rodeo last Saturday, returning home Sunday.

Miss Dorothy Arnold and the Leary sisters of Corona were here Monday, returning home in the evening.

The Hamburger Restaurant next door to the Outlook office has been sold to the O'Rear brothers, Pete and Tom, who purchased the place on Monday of this week. The former owners, Mr. and Mrs. Lawrence Drago, are now in Texas, where after a visit with relatives, they will go to their truck farm near Socorro. The O'Rear boys solicit your patronage.

Royes Marrujo and Rafael Lopez were business visitors from Rabenton Wednesday.

Mr. and Mrs. Dan Conley are sojourning at Eagle Creek for the week-end.

Mr. and Mrs. Albert Steinbring, daughter Jean, son Wesley Edward, Mrs. Wheeler and daughter Vivian, all of Lawrence, Kansas, who were week-end guests at the Ladema Joyce home, left Monday for the Grand Canyon, Petrified Forest and places of interest in California, before returning home.

Other day in going through his collection, he found among a lot he had lately purchased, a one-cent stamp bearing a B. I. more cancellation, date of Aug. 17, 1861. He bought the collection for \$300, and the stamp just mentioned, he said was worth \$50,000.

Bruckart's Washington Digest

MIXTURE OF RELIEF CASH AND POLITICS DANGEROUS

Candidates' Methods of Influencing Voters Scored by Washington Observer; Suggests Return to Election of Senators by Legislatures

By WILLIAM BRUCKART WNU Service, National Press Bldg., Washington, D. C.

WASHINGTON. — I had finished reading my evening paper a few nights ago when I found myself quite down in the dumps. The news of the day was disturbing. It was vicious news in its implications. There was so much of it that was disturbing that I could not help wondering where we, as a people, are headed.

And then, rather in disgust with the whole thing, I turned to a new book. The volume is titled "Notable Virginia Bar Addresses." Among the 27 speeches listed there, I decided to read that by the late Thomas R. Marshall. His address, like all of the others, was intended to preach good government and the obligations of the lawyer as well as the layman.

Marshall's Apology

Thomas R. Marshall, Vice President of the United States in the Wilson administration, once said: "I have only one apology that I know of to make for my political life. I apologize to the American people for having been in favor of the election of United States senators by the people." There, thinks William Bruckart, is the key to today's problem. Let state legislators pick U. S. senators, he says, and we'll be rid of the demagogue who is elected by his ability to promise more than the opposition.

there were countless charges of the use of money, federal relief money, state payroll money, other money.

There was, likewise, a fight going on next door. In Kentucky, Gov. "Happy" Chandler was seeking the Democratic nomination to the senate and Sen. "Dear Alben" Barkley wanted to be renominated and re-elected. Also, the New Dealers in Washington, from President Roosevelt on down wanted Senator Barkley sent back, and the President had gone into Kentucky to tell the voters of his views. Again: money, federal relief money, state payroll money, charges of attempted trades of federal judgeships so that there would not have to be a bitter primary fight like that which came.

Mr. Hopkins' Idea on Relief Votes Backfires

Here in Washington, there was the greatest spender of all time, Mr. Harry Hopkins, head of the Works Progress Administration and professional reliever of destitute persons whether they are politicians or the poor, popping off another idea. Mr. Hopkins was saying that 90 per cent of the relief clients would vote for President Roosevelt for a third term. It was a statement that immediately caused a backfire from Capitol Hill where Senator Sheppard of Texas was saying as chairman of the committee investigating the use of relief money in politics, that there must be something done about such methods of influencing voters.

In another place, I read how Governor Earle of Pennsylvania was calling the state legislature into special session there to enact laws that would prevent a grand jury from investigating some of the governor's acts. The call for the special session had been preceded, of course, by a terrific political fight over the Democratic nomination for United States senator in Pennsylvania, which was won by Governor Earle. The governor preferred to have the investigating done by members of the state legislature, if there was to be an inquiry, rather than by an independent group. The only way to prevent it was by a law taking away the authority of the courts and the grand jury.

There were other states involved, too. Senator McAdoo, who is seeking renomination as the Democratic senatorial candidate in California, was under fire. Some of his campaigners, it was charged, were using coercion as well as federal relief funds, while out in South Dakota opponents of Governor Berry, now the Democratic nominee for the United States senate, were bringing forth a new set of charges. They informed the senate committee here that the Farm Security Administration in South Dakota had been sending out a press release that had nice things to say about Governor Berry. The press release was two years old, of course, but the FSA was mailing out many of them to voters—and paying no postage on them. It was another case of using the franking privilege, said the accusers.

Politics Hits New Low With No Change in Sight

It was enough to make one sick at the stomach; here was politics in a new quagmire, and no signs to indicate that it is not a permanent condition. What, I thought, is going to be the type of men coming in to the United States senate with such backgrounds as these stories indicated?

I have only one apology that I know of to make for my political life. I apologize to the American people for having been in favor of the election of United States senators by the people. My reason for it was different from the reason of many men. I had gotten tired of voting for some old run-nosed Democrat for the legislature in Indiana because a United States senator depended on him for election; and I thought that I could raise the grade of legislators in Indiana by letting the people elect the United States senators.

Answer to Today's Problem Given in 1920

And right there, I believe, is the guts of the present day problem. Mr. Marshall had held many elective offices and the speech from which I quoted the above passage was made while he was vice president of the United States. He was an observer and a student of politics. He saw in 1920 where we, as a people, were going and I have no doubt that he could have predicted exactly the set of circumstances we are meeting now.

When Senator Norris of Nebraska, once a Republican, then a Democrat, and now labeled as something else, drove the constitutional amendment through congress and cleared the way for direct election of United States senators, he accomplished two things. (1) He made it possible for the purest type of demagogue to win elections by his ability to "promise" more than the opposition, rewards, political patronage, pork barrel returns to the state and (2) he assured that vast sums of money can—indeed, must be—used to influence elections.

Too Many Senators Out for Greatest Amount of Swag

I grant that corporations, "vested interests," formerly had too much to say about the election of United States senators by state legislatures. But of the two, I have come to the conclusion that we had a better national administration and particularly a better senate under that condition than under the system where every voter casts a ballot directly for a United States senatorial nominee. That is why 75 per cent of the present senate members are nothing more or less than salesmen who are trying to collect for their states the greatest amount of swag which they can put over with their brother senators. That is why, too, day after day, we have watched cliques formed and trading done over legislation in the senate. The senators either are trying to make good on demagogic promises or they are building a storehouse to be used in the next campaign.

Senator Norris may have thought he was performing a great service to the American people and he may have felt that he was building a monument for his name, but I am firmly convinced he did quite the contrary. For, he it known, was it not for Mr. Norris' monumental amendment to the Constitution of the United States there could hardly be such an outrage committed as that by Mr. Hopkins. It must be remembered that Mr. Hopkins never was elected; he is an appointee of the President of the United States and is responsible to him alone. So when Mr. Hopkins flirts with a state electorate, there can be no other interpretation placed upon his action than that he is using the influence available as a result of his dictatorship over relief distribution.

It all depends, of course, upon how one views the functions and purposes of the United States senate. If one wants the senate to be just a glorified house of representatives, able to maintain itself solely on what pap it is able to lay in the laps of voters—then, we ought to keep the present system. If, however, one believes as I do that the senate is comprised, or should be, of senators of the United States instead of senators of a state variety unconcerned with the Union of states, then there could well be repeal of the amendment.

FARM TOPICS

CHICK DISEASE IS COSTLY TO FARMER

Cleanliness Urged as Best Method of Control.

Supplied by the College of Agriculture, University of Illinois.—WNU Service. The best way to fight coccidiosis, one of the most widespread parasitic diseases of young chickens, is to practice rigid sanitary measures and thus prevent its getting a start in the flock.

During the early summer farmers are likely to spend considerable money for remedies recommended in the treatment of coccidiosis. However, it is pointed out that although many treatments have been tried and advocated for curing the disease, the opinion of poultry investigators is that none of these treatments is effective.

Daily cleaning and disinfecting of the brooder house and poultry yards is recommended for preventing the spread of the disease, the acute form of which often causes death among birds up to two months of age.

A well-balanced diet supplemented by a generous amount of green feed is important for building up the bird's resistance to coccidiosis. Feeding of a mash containing 40 per cent dried skim milk or buttermilk has been advocated generally as being effective in protecting young chickens from infection.

Coccidiosis is easily recognized by such symptoms as ruffled feathers, pallor, rapid emaciation and bloody droppings. The disease is spread by contamination of the feed, water and soil with droppings of fowls harboring the parasites. Water, shoes, grain sacks, or other objects may carry the parasites. They are also spread by birds or insects which fly from one poultry yard to another.

United States Safest Country for Live Stock

The United States is probably the safest country in the world in which to raise live stock, says Dr. John R. Mohler, chief of the bureau of animal industry, United States department of agriculture. "In addition, the supply and the wholesomeness of animal products in this country are excelled by those of no other nation."

Step by step, scientific research, he adds, has been whittling down the dangers and losses until the supply of meat and milk has become one of the most dependable elements of national life. Even in times of widespread drought and untimely freezing temperatures that curtail cereal, vegetable and fruit crops, the production of meat and milk continues.

Nest Talk

The common poultry house nest has an open entrance from the front, but fewer eggs would be broken and less adult cannibalism would occur if a dark entrance were provided from the rear, says a writer in Hoard's Dairyman. This change can usually be accomplished by setting the present nests out from the wall with legs and wall supports and by 4-inch board walk-ways on the wall supports.

One Crop Dairy Farmer

"One crop" Harry Norton, as he is called by his neighbors around Adelphi, N. J., is a dairy farmer who threw out all his plows and went into grassland farming. Norton feeds his herd grass, 12 months of the year. Half the year the cattle are in pasture, and the other half they eat grass silage and early-cut hay.

IMPROVED SUNDAY SCHOOL LESSON

By HAROLD L. LUNDQUIST, D. D., Dean of the Moody Bible Institute of Chicago. © Western Newspaper Union.

Lesson for August 14

THE RELATION OF TEMPERANCE TO CHARACTER LESSON TEXT—Proverbs 4:10-23; I Thessalonians 5:6-8. GOLDEN TEXT—Wine is a mocker, strong drink is raging; and whosoever is deceived thereby is not wise.—Proverbs 20:1.

Childhood remembrances are commonly sweet and precious—but some of them are vivid on the pages of memory because they relate to dangerous and distressing things. Among the things decent people avoided like the pestilence when the writer was a boy was the saloon. To be seen entering such places was to mark one's character, and to be a frequenter of them was to be lost to all that was good and holy.

High sounding and very pious were the assurances that when prohibition was repealed we would never see the return of the saloon, but we have them in multiplied number, and with a shameless appeal to women as well as men, to our growing girls and boys as well as to adults.

A man may be a perfect encyclopedia of information and yet may lack the wisdom to apply that knowledge to life. Dr. Hight C. Moore, in Points for Emphasis, provides a most helpful outline of this portion of Proverbs 4, which will assist the reader and teacher.

Step by step, scientific research, he adds, has been whittling down the dangers and losses until the supply of meat and milk has become one of the most dependable elements of national life. Even in times of widespread drought and untimely freezing temperatures that curtail cereal, vegetable and fruit crops, the production of meat and milk continues.

The young man or woman who is thus taught God's Word in the home and the church will have an impregnable defense against the wiles and temptations of the world, the flesh, and the devil.

The Lord is coming again! Paul was constantly looking forward to the day of His coming. It was not his lot to live until the Lord came, but he was not mistaken in looking for Him. The Lord has tarried, why only He knows, but it is the judgment of many excellent Bible expositors that the next great event to take place in divine history is His return.

Monkey Steals Baby Stealing a baby from its cot in Kalawala, Ceylon, a monkey climbed to the roof and rocked the infant to sleep as it had seen the mother do. The stealer was hauled from the cot and shot. The baby was rescued unharmed.

Men of the Mounted

BATTLE AT McDONALD'S FARM

HOW four youthful Chicago criminals started out to give Canada a few thrills by staging a cross-country crime wage, and how these conceited young punks finished up as riddled corpses inside of two weeks, makes one of the best police stories in years.

Equipped with pistols and ammunition, several bottles of hair oil, a few shirts, and a fine big shiny automobile that had a powerful engine under its hood, the squad set out for the Dominion. Sneaking into Saskatchewan unobserved, the first act was to get the right sort of license plates. This done, and traveling mostly at night, they headed northward and were soon in the heart of the prairie country.

Further on a bit he would pass the MacDonald homestead in which was kept the only safe, and strong box in all the vast prairie territory. Hector MacDonald, which isn't his real name, of course, was a polished, cultured gentleman in whom scores of outlying settlers placed full and complete trust.

Five Hurricanes May Be Expected Yearly In Southeast States

WASHINGTON.—An average of five hurricanes a year sweep from their birthplace in the doldrums of the tropical Atlantic toward the southeastern and gulf states, but usually only one of this number is severely destructive.

The most destructive known was that which caused the Galveston disaster in 1900. Even then, most of the 6,000 lives lost were taken by a tidal wave which rushed upon the stricken city after the hurricane had left it helpless. Since that time Miami and Palm Beach have felt the effect of the West Indian hurricane and millions have been lost in property damage but comparatively few lives taken.

The hurricane of the western hemisphere is the same as the typhoon of the eastern hemisphere. A majority of both begin in practically the same way in a calm region of hot, humid atmosphere, one in mid-Atlantic and the other in mid-Pacific. Heated air rises through cooler and heavier layers and sets up the initial whirl, it is thought. The storm then moves off and gathers volume as it goes.

High Velocities Reached. It is an extensive disturbance often hundreds of miles in diameter and has a dead area of practically no wind at its center, but in the whirl enormous velocities are reached. A velocity of 123 miles an hour was recorded during a hurricane at Miami, September 18, 1925.

The hurricane travels for about 10 or 15 miles an hour over most of its course. It holds to the same course for days, but this is hard to predict because reports are usually meager as the hurricane comes from an unfrequented part of the ocean. It was a hurricane that brought the heaviest 24-hour rainfall ever recorded in the United States. This was at Taylor, Texas, September 9-10, 1921, where a fall of 23.11 inches of water occurred.

Hurricanes and typhoons are nature's most powerful storms. Such a storm will expend in a day's time enough energy to run all the power plants of the earth for several years. This enormous power comes largely from the latent heat of condensation of the heavy rainfall which always accompanies the storm, scientists now believe. The necessary water vapor is thought to be supplied by winds which blow continually to the hurricane.

In the northern hemisphere, because of the earth's rotation, a hurricane or typhoon spins in a counter-clockwise direction, but in the southern hemisphere it turns clockwise.

Our Particular Galaxy Is Not So Thin as It Seems

PROVIDENCE, R. I.—The galaxy of stars containing the earth and the sun, often thought of as a flat disk in space, is not as thin as it may seem.

It would take light at least 100,000 years to cross the galaxy at its thickest part even though light travels at approximately 186,000 miles a second, said Dr. Harlow Shapley, director of Harvard College observatory, at the meeting of the American Association of Variable Star Observers, held at Brown university's Ladd observatory.

A survey of 2,300 Cepheid variable stars of the cluster type, having periods of less than a day, made possible the new estimate of the shape of the galaxy.

Our galaxy actually is surrounded by a thinly-populated spherical aura or halo of stars, Doctor Shapley added. In this it resembles the Andromeda nebula, one of the nearest of the spiral nebulae.

The isolated star most remote from the plane of the Milky Way, known as BE Virginis, is distant 130,000 light years.

Java Bird Life Suffers From Beliefs of Natives

BANDOENG, JAVA.—Netherlands authorities in Java, trying to carry out an admirably planned conservation program, have their troubles because of many native beliefs and habits.

The Malays believe that children can acquire the characteristics of birds by eating them. So they feed king-crows and shrikes to infants, to make them lively and communicative. Dull, lazy children are compelled to eat fan-tailed flycatchers, which are very active, industrious birds.

A great deal of destruction of bird life is wrought through the Malay fondness for pets. Children are given young storks, bulbuls, pigeons and starlings to play with—naturally, with ultimately fatal results to the birds.

Suppressed Anger Is Cause of Malignant High Blood Pressure

By JANE STAFFORD
SAN FRANCISCO.—If you get mad at the boss and tell him so, you will probably lose your job; but if you stay mad at him for years without boiling over at him, you are probably damaging your arteries and building up a dangerously high blood pressure.

Hostility suppressed for years like a boiling volcano which never erupts is the fundamental cause of the malignant high blood pressure for which no physical cause has ever been found, Drs. Franz Alexander and Leon J. Saul of the Institute for Psychoanalysis in Chicago told members of the American Psychiatric association here.

The cases of two men and two women who all had this same consciously suppressed hostility and rage were cited to show how this could cause high blood pressure.

Four Sample Patients. The hostility toward the boss, which all four patients felt, was not due to the boss himself but in every case to rage at having been forced by a dominating mother to lead dutiful, conventional lives which they hated. For these are not the red-faced, choleric, temper persons whom you suspect at first glance of having high blood pressure. The four patients and others like them are gentle, generous to subordinates, conscientious, model citizens.

Measurements taken at psychoanalytic sessions showed that the blood pressure rose when the patient was found by psychiatric analysis to be at a pitch of rebellion and dropped to normal when the patient had a temporary spell of inner calm.

In this the psychiatrists see hope of preventing dangerously high blood pressure by giving psychiatric treatment early while the rises are fluctuating and not very great. In time these fluctuations, they believe, damage the arteries, narrowing the bore so that the heart must work at constantly greater pressure to drive the blood through.

Siam Has Three Kinds Of Mass Bird Migration

WASHINGTON.—Birds of Siam have three kinds of mass migration, instead of the one kind that is known to temperate zones. Besides the usual north-and-south seasonal movement in which many Siamese species take part, there are also a water migration and a food migration, reports H. G. Delgnan of the Smithsonian institution.

The water migration consists in the movement of vast numbers of water birds toward higher land areas with the coming of the rainy season and its attendant higher water levels in swamps and shallow lakes.

The food migration may be simply the result of scouting activities, in which certain individual birds discover places where mangoes, wild figs, and other fruits are ripe, and are then followed by the millions of members of the main flocks. Food migrations are indulged in only by birds of the pigeon and parrot families.

Another Lost Continent Found in North Mexico

NEW YORK.—Another "lost continent," this time in northern Mexico, has been reported to the Geological Society of America. Two geologists, Dr. Lewis B. Kellum and Dr. Ralph Inlay, both of the University of Michigan, are the discoverers. Indications of a "lost ocean," that separated North and South America 100,000,000 years ago have also been found.

The "lost continent," according to geologists, had a shape like a bear's paw, reaching southwestward from Texas into an ocean occupying what is now central Mexico. Crumpled and folded rocks, laid down in a sea during Permian times, gave the first clues to this ancient land.

Other reports, in recent years, tell of "giant bones" in this area—perhaps the bones of dinosaurs; of rocks containing "the bones of little chickens," and other strange occurrences which will furnish more clues to the geologists.

Efficient Transformer

WASHINGTON.—A new type of transformer, representing the first basic change in this important piece of electrical equipment since its invention more than 50 years ago, which is cheaper, smaller and more efficient than existing types, was described before the American Institute of Electrical Engineers here. Its core is wound through the coils instead of the coils around the core.

Ancient Wood Borers

WASHINGTON.—Trees 200,000,000 years ago were troubled in much the same fashion with wood-boring insects as are trees today. Traces of such insects have been found in the logs of the Petrified Forest of Arizona by M. V. Walker, national park service naturalist.

Goiter of the Serious Type

By DR. JAMES W. BARTON
© Bell Syndicate—WNU Service

IN GOITER of the serious type the family physician advises removal of the thyroid gland by surgery. There is, of course, the operation and the anesthetic to be considered, and despite the fact that the removal of the thyroid gland is now done in every hospital and considered as "safe" as other operations, there are many patients still afraid of operations. There are other cases also where the physician believes that operation would be unwise, even dangerous.

Prolonged rest and the use of iodine (Lugol's solution) will help some cases but there are many severe cases where more than this treatment is absolutely necessary to save life. Thus the X-ray has been used for many years when surgery is inadvisable, or the patient unwilling to undergo operation.

Dr. Barton

Dr. P. Hess, in Strahlentherapie,

Berlin, reports the results of X-ray treatment in 140 cases of the serious form of goiter. He shows that where good results were not obtained by X-ray treatment, there had not been enough of the treatment given, or the patient was not given proper encouragement.

Not only do no deaths occur from the X-ray treatment, but there are many severe cases that are unsuitable for surgical or medical treatment, that are completely cured by the X-ray method.

Chronic Appendicitis

Most physicians agree that in cases of acute appendicitis—increased temperature and pulse rate, increase in white corpuscles of blood, tightening of the abdomen—operation should be performed, and the earlier the better.

In cases of chronic appendicitis, however, there is not the same agreement as to operation, because, unfortunately many physicians have had cases where no improvement followed operation and some cases appeared definitely worse.

What may be the explanation of many cases of this so-called chronic appendicitis—constant pain in appendix region—is given by Dr. W. A. Bigelow, Brandon, Manitoba, in the Canadian Medical Association Journal, who states that the pain, colic, dragging, and other symptoms are due to fibrous bands—present at birth—which have fastened the last part of the small intestine and first part of the large intestine together instead of allowing them to remain free from one another as in the normal individual.

Dr. Bigelow reports the results of removing these bands in the cure of cases of so-called "chronic appendicitis."

"A questionnaire was sent out in January, 1937, to only those on whom the removal of the appendix had been done elsewhere, previous to our operation for the removal of these bands. None of the patients included in this report had received any relief whatever from the removal of the appendix itself. Only one question was asked, 'Have you been completely relieved of your one-sided pain since we removed these bands?' One hundred and forty-seven answers were received from a total of 161. Of this number 136 reported cured and 11 reported not cured."

Teeth Give a Good Clue In Identifying Bodies

In this country and in Europe there are thousands of unknown dead of the World War. Many of these soldier-dead, says Dr. Edward J. Ryan, writing in Scientific American, could have been returned to their families for burial if identification by the teeth had been universally practiced. Further, civilian catastrophes each year take their toll of lives; in many of them the bodies are so badly burned or otherwise disfigured that normal methods of identification, including fingerprints, are of no avail.

It is a definitely established fact that no two mouths are precisely alike. Even after extraction of all teeth, the residual bone retains certain X-ray characteristics, and the distinguishing differences and deviations from the normal may be noted on a chart. Teeth have definite individual characteristics; the relationship of the teeth to one another varies with each person.

There already has been devised a standardized chart on which the various peculiarities of the individual mouth can be entered for future comparison and identification. If a system using such a chart could be placed in universal use it would be possible to solve many cases of mysterious disappearances, of criminal activities, and of unidentified death, Dr. Ryan believes.

WHAT to EAT and WHY

C. Houston Goudiss Analyzes The Cereal Grains

Well Known Food Authority Describes Their Place in the Diet

By C. HOUSTON GOUDISS
6 East 39th Street, New York City

TO ME, there is no more inspiring sight in the world than a field of nodding golden grain. It not only pleases the eye with its grace and profound beauty, but it attests to Nature's bounty. For down through the ages, grains have sustained and comforted man.

In every quarter of the globe, foods made from grain constitute the largest single item in the food supply. This is as it should be, for no other foodstuff affords such a rich store of fuel value at such little cost. It has been estimated that during one day's labor, an American farmer, growing wheat by up-to-date American methods, can produce enough protein and calories to sustain a man for a year.

A Source of Power and Pep

Every nation depends upon some form of cereal to furnish motive power for the body machinery—to provide necessary energy to keep body and brain functioning efficiently. In the Western world, wheat is supreme. But in Oriental countries, rice takes the lead and it is the chief article of food for half of the world's people. Rye, oats, barley, maize and buckwheat are likewise important crops.

★

Energy Values Compared
All uncooked cereal foods show great similarity in their chemical composition and therefore have very nearly the same energy value—that is about 1,650 calories per pound. The weight of a 100-calorie portion is about an ounce. But there is a wide variation in bulk, depending upon the degree to which the cereal has been refined. For example, three tablespoons of patent wheat flour weigh one ounce; one and one-fourth cups of a puffed wheat cereal likewise weigh one ounce. After cooking, there is a big variation in weight, as well as measure, owing to the varying amounts of water absorbed. Thus a cup of cooked oatmeal mush supplies the same number of calories as three tablespoons of a pebbly dry cereal with a nut-like taste.

★

The Cereal Proteins
From 8 to 12 per cent of the calories in cereal foods are obtained from protein and two noted investigators have estimated that grain products contribute 38 per cent of the total calories and 37 per cent of the protein in the typical American diet.

Laboratory experiments indicate that the proteins of wheat, oats, maize, rye and barley are about equally efficient in promoting and supporting growth. None of them compares with an equivalent weight of the complete proteins of milk, eggs or meat, but when combined with small amounts of milk, the cereal proteins become highly efficient.

★

Iron and Copper
The mineral elements of grains are concentrated largely in the outer layers and in the germ. For this reason, there is considerable difference in the yield of minerals from whole grain and highly refined cereal foods. The mineral content of bran is from 10 to 20 times greater than that of patent flour, and whole wheat contains from three to five times as much iron, calcium and phosphorus. Bran, oatmeal and whole grain cereals are a good source of copper as well as iron.

★

Rich in Vitamin B
The different cereal grains are quite similar in their vitamin values, but as the vitamins are very unevenly distributed throughout

★

YOU WON'T MIND THE HEAT IF YOU LEARN HOW TO KEEP COOL WITH FOOD

SEND FOR THIS FREE BULLETIN

★ C. Houston Goudiss offers a free bulletin "KEEPING COOL WITH FOOD" which discusses the difference between "heating" and "cooling" foods and contains simple stories showing how to eat for hot-weather health and comfort. A post card is sufficient to carry your request. Just address C. Houston Goudiss, 6 East 39th Street, New York City, and ask for "Keeping Cool with Food."

Reduce

Summer is the Best Time to—

Send for this Free Reducing Bulletin and Caloric Chart

You'll feel better, look better, enjoy better health if you get rid of excess pounds. The safe, sure and comfortable way to reduce is to count your calories, as outlined in the Caloric Chart and Reducing Bulletin, complete with menus, offered free by C. Houston Goudiss. Write him at 6 East 39th Street, New York City, and ask for the Reducing Bulletin.

constitute the mainstay of the diet. Fortunately, there is such a wide variety from which to choose that there is little likelihood of monotony. Furthermore, because of their bland flavor, one does not readily tire of cereal foods.

In addition to the wide variety of breads, rolls, muffins, biscuits and griddle cakes that can be made from refined and whole grain flours, there are an astonishing number of cooked and uncooked cereals from which to choose. When served with milk, bread or cereals make an ideal and economical food combination.

★

Macaroni for a Main Dish

Besides serving as the main feature at breakfast and for the child's supper, cereal foods are useful as the chief attraction at dinner or supper when served in the form of macaroni, spaghetti or egg noodles. They are a fine source of energy and also furnish about 12 per cent protein. When combined with cheese, which adds protein, minerals and vitamins, they constitute a balanced main dish.

Cereal products of all kinds deserve a ranking place among FOODS THAT KEEP US FIT.

★

Questions Answered

Miss R. M.—There is no evidence to indicate any relation between thunderstorms and the souring of milk. Thunderstorms are more likely to occur during the summer when temperatures are high. Hot weather also induces bacterial growth in milk.

★

Mrs. J. McK.—Though the food value of meat extracts is low, they have a tempting flavor, due to the presence of the savory extractives which stimulate appetite. Their content of potash salts causes a quickened and stronger heart beat. In fact, it has been said that their effect is more like a stimulant than a food. That is why they are often used as a restorative for invalids.

HOW to SEW

By RUTH WYETH SPEARS

WE SAY luncheon mats yet, more and more, mats are being used three times a day. This change from the traditional table cloth saves time and laundry; the color and variety of mats add interest to table settings.

A set of sheerest organdie is used with dainty china. The mat shown here is the other extreme.

It is made of soft blue denim and is embroidered in heavy white cotton. Napkins may be made to match, or plain white napkins may be used. Here are all the directions you will need for the embroidery.

Cut the mats the desired size, pulling a thread of the fabric to guide you in cutting the edge straight. Hem the edges by hand with 1/4-inch-hems, using matching cotton sewing thread or raveled threads of the fabric if they are strong enough. Now, blanket stitch over the hems with the embroidery thread as shown here at A. Next, make tiny chain stitches between the blanket stitches as at B. This completes the embroidery for the long sides of the mats. The short ends are embroidered more elaborately. Make a V stitch at the top of every other blanket stitch as shown at C. Chain stitches are then made as at D.

He Left Everything

A merchant, being told he had only a few days to live, called his lawyer, and said: "Make my will so my overdraft at the bank goes to my wife—she can explain it. My equity in my car to my son—he will have to go to work to keep up the payments. Give my good will to the supply houses—they took some awful chances on me and are entitled to something. My equipment you can give to the junkman—he has had his eye on it for several years. I want six of my creditors for pallbearers—they carried me so long they might as well finish the job."—Hoard's Dairyman.

Lincoln Beats Capitan

The Capitan White Ducks went to Lincoln Sunday, but were not there as far as playing ball is concerned, as a Luna-Gonzales pitching combination proved too much for the Ducks. Luna tossed it for 4 innings and only allowed 2 runs, while the Billy the Kids were hitting the old pill and crossing home 4 times. During these 3 innings, the newly-acquired pitcher, Eddie Zamora, was doing his best, but just did not get enough support from his teammates. So Cyclone Filomeno went to the hill to see what he could do with those "wild kids," but nothing doing. They assaulted him by being so naughty as to score 3 more runs. Colly Gonzales went to the mound in the 4th and held Capitan scoreless the rest of the game. Score—Lincoln 7; Capitan 2.—By H. M. Maes.

ATTENTION—For new subscriptions or renewals to any of the current magazines, see any member of the Methodist Missionary Society.

The Lincoln County Sunday afternoon sing meets at Hondo Aug. 14. We have the new book, "Brightest Beams," just published. Everyone invited.

We announce with pride a new feature in this issue, "What You Eat and Why," by C. Houston Goudles, noted food authority, radio speaker, author and lecturer, famous as the man who knows food "from soil to serving, from table to tissue."

One of these articles will appear each week, and we know housewives and mothers will look forward to them for the accurate, worthwhile information they contain on foods and their relation to health. This is not a recipe column. Mr. Goudles has designed it to serve as a link between laboratory and layman in the food field, interpreting modern scientific knowledge in the language of the home maker, giving her the elemental facts regarding new discoveries and the part played by food in building and maintaining health.

Every woman wants to know what will benefit her family and what and that is just the information that Mr. Goudles will give. Look for the articles each week. It is a scrap book of them for ready reference. They contain valuable information every home maker has been wanting.

Letters From Home

By **RAYMOND PITCAIRN**
National Chairman
Senators of the Republic

Recently there descended on Congress from the folks back home a flood of protests on the so-called Reorganization Bill.

Specifically, many of the messages opposed features of the measure which constituents feared would remove certain funds; would grant to the Executive branch of government powers they felt should be limited to the Legislative branch, and would change the administration of our Civil Service.

But fundamentally, in the opinion of experienced observers, what the public most feared was the possibility of further surrender by Congress of the power and authority entrusted to it by the Constitution and the people.

This apprehension was not groundless. In recent years, in response to pleas of emergency, the public has seen many Congressmen willing to relinquish to the Executive branch of government and its bureau responsibilities which they were elected to assume. Every surrender of such authority means, of course, a surrender of the power of the people these Congressmen represent.

If enough of that authority is bartered away, our boasted "balance of powers" between the Legislative, the Executive and the Judicial branches of government can become an empty phrase.

So long as that authority is retained by the people through their elected representatives, Democracy persists. If it is lost, Democracy falls. The Old World today offers eloquent evidence of what can happen to human freedom and human rights when representative government fails to assert itself.

That is something for Congressmen to remember when they read the mail which urges them to fulfill the responsibilities for which they were elected, and thus keep government close to their constituents, the people.

Mirages Seen No More
Certain parts of Kansas were formerly noted for the number of mirages to be encountered there at rather frequent intervals, but in recent years these interesting sky pictures have disappeared and the reason is said to rest in the fact that the state has been largely planted with wheat and the lack of variety in the landscape gives no opportunity for the formation of a mirage.

BANKING LOOKS AHEAD

We Should Go Forward

After every setback, America has gone forward. But we should not rest our hopes for the future on a blind faith that history will repeat itself. True, the stage is set for prosperity. New products are needed everywhere. Business is ready to fill these needs. Banks have ample credit. And millions are able to buy.—We should go forward—but first there must be cooperation. All groups must work together for our common goal—progress.

ROLLAND'S DRUG STORE

**Protection For
The Jobless**

By RAYMOND PITCAIRN

In Washington, as this is written, a Senatorial Committee is investigating charges, from various sources, that certain attempts have been made to inject politics into the distribution of funds intended to help the jobless and unfortunate.

In several states, members of Congress have announced their intentions to offer or support at the next session rigid legislation directed against some of the practices that have been reported.

Behind these efforts to probe the charges should rally the strong support of all the people. They have a right to know the facts. For if public funds and public sympathy are misused, the practice can hurt everyone. It can injure not only the helpless poor, who need protection, but also the employed workers and earners who, in the last analysis, pay the bills.

The American people are glad to extend cheerful aid to their less fortunate brethren, but they want that aid to be one hundred per cent impartial, one hundred per cent efficient.

In the administration of assistance they want a dollar's worth of help to be the jobless for every dollar of public funds devoted to that cause. They want their money's worth—not for themselves but for the unfortunate.

They want such help to be free of political pressure, whatever its source, whatever its faction, whatever its party.

If political consideration creeps into public aid, it affronts the whole ideal of justice, democracy and cooperation to which America is dedicated. But it does more than that.

It robs, as well, the noblest sentiment of humanity—a spirit of sympathy and compassion for those who suffer misfortune and despair.

Speaking of Sports

Champs Are Youngsters, Survey Shows

By GEORGE A. BARCLAY

IF YOU want to be a champion corn husker, a star baseball player or an ace prize fighter, you had better get around to it by or before the age of thirty.

Sporting championships belong to youth, says Professor Lehman and he proceeds to support his contention with impressive statistics.

JOHNNY VANDER MEER

Stanislaus Zbyszko was heavyweight wrestling champion at sixty. They might add that Big Bill Tilden at the age of forty could beat any kid in tennis.

Baseball players reach stardom in the upper twenties, the Lehman survey shows. The best single year of the average baseball player, be he pitcher, infielder or outfielder, is twenty-eight.

Pugilistic Prime

Prize fighters reach their peak a few years earlier than baseball players, most of the championships in the various divisions being won regularly by boxers from twenty-four to twenty-seven, according to Professor Lehman.

The Lehman figures show that the average age of boxing champions decreases steadily from twenty-nine for heavyweights to twenty-eight for light heavyweights, twenty-seven for

JOE LOUIS

middleweights, twenty-six for welterweights, lightweights and featherweights and twenty-four for bantamweights.

Youngsters have their best chance in tennis, the figures reveal, most of the championships going to players between twenty-two and twenty-six.

But if your sporting inclinations lead different directions, the age curve may rise slightly. Suppose you have ambitions to be a champion corn husker. Then the year in which the greatest chances of success offer themselves is thirty.

Season of Upsets

PUT the season of 1933 down in your notebook as one of upsets in the baseball world. Heroes who have made the headlines steadily for years have failed to elicit this year.

An example of the changing baseball world is the failure of Lou Gehrig of the Yankees to sparkle this year and the disappointing showing of Joe Di Maggio so far.

The sporting world marveled a year ago at the feats of the Boston Bees' "graybeard rookies," Jim Turner and Lou Fette.

Joe Medwick of the Cardinals has been hitting solidly this year, but his batting average is nowhere near the 400 clip he enjoyed most of the 1937 season.

The Chicago White Sox and the Washington Senators are bewildered over the inability of Joe Kuhel and Zeke Bonura, the first basemen they swapped, to get going this year.

On the bright side, of course, is the advent of flashy newcomers into the baseball headlines. Probably the most sensational is no-hit Johnny Vander Meer of the Cincinnati Reds among standouts this year.

Hostile Hostak

ALREADY crowded with more topnotch fighters than any other pugilistic class, the middleweight division now comes up with a new punching phenom—Al Hostak, who

AL HOSTAK

won the championship from Freddie Steele recently. Hostak has never fought outside his native state of Washington.

There is plenty of classy opposition for the swarming of the middleweights to meet when he gets around to it. Right out on the coast he can fight Fred Apostoli, who holds a decision over Steele and has been called the "swarwood champion" and "Keano Carbett."

Half a dozen other standouts in the middleweight division could probably give Hostak an argument. They include Solly Krieger, Woods, Yarnoz and the new sensation, Billy Soosa of Penn-State.

Here and There

A UNIQUE golf performance in England recently is that of Leonard G. Crawley, English champion and Walker cup player, who won two competitions in one day—the St. George's Hill trophy at Weybridge and the Gold Medal at Sunningdale.

Sammy Gray, former American league pitcher, is managing and doing relief duty for Texarkana in the East Texas league. There have been no shutouts in the All-Star baseball series. . . . Joe Boley, former shortstop for the Athletics, has been dropped as manager of the Pocomoke City team in the Eastern Shore league. . . . Moe Swaney, former minor leaguer, is fifty-two years old, but he plans to pitch 20 games for the House of David team this summer. . . . Mel Ott and Carl Hubbell are the only active members of the Giants who were with the team in 1936. . . . Murray Kemer, a sparring partner in Joe Louis' training camp, is a former North Carolina lineman who quit the Philadelphia Eagles after three days because he said pre football was too tough.

Australian cowboys "mustering" cattle.

Stock Ranches of the 'Down Under' Continent Measured in Square Miles

Prepared by National Geographic Society, Washington, D. C.—WNU Service.

OUT in the more remote regions of Queensland, Northern Territory and Western Australia, and in the arid center of Australia, cattle properties are still measured in square miles, not acres.

Picture a single cattle station larger than Massachusetts and Connecticut. Look at it also as a band five miles wide extending all the way from New York to San Francisco; or, fantastic thought, a land path more than a mile wide all the way from the farthest side of Australia to Maine! For it is 13,000 square miles!

One cattle man, whose station lies on the Queensland-Northern Territory border, tells you quite casually that it is a 125-mile horseback journey from his back porch to the back line of his property.

Like many of the older holdings, none of his land is fenced, so the cattle often stray far afield.

During the summer months they move southward into the prevailing winds to rid themselves of the myriad flies that pester them. Consequently, the station hands often have the task of riding 250 miles to get their stock back to their own property. The herds also may wander 40 or 60 miles in the direction of storms if they lack water.

Early one morning a Geographic staff writer flew out to a cattle station, 300 miles into the Queensland interior, landed in a field near the house, and taxied up to the gateway.

What One Station Is Like. The station was not large as many of the inland stations run, but it was a goodly block of land—1,200 square miles—pasturing 25,000 head of stock!

As he rode its ranges, he saw one herd of 1,500 steers that had just arrived from a four months' trek of a thousand miles down from the gulf country. From the fattening paddock where they grazed to market was still another 200-mile overland journey.

Upon food and water hinges success or failure. How many times tragedy has stalked beside dried-up water holes and parched pastures! Whole herds have perished in rigorous seasons and the strenuous labor of cattlemen has come to dramatic nought.

As shearing is the big event on sheep stations, so mustering for branding and sorting is the chief activity on cattle ranches.

Herds on this property are handled from 15 mustering camps and it usually takes four to six months to complete the work.

Here, where life is attuned to the ceaseless moan and bellow of cattle about water holes and in branding corrals, the American Wild West is reflected in ten-gallon Stetson hats that have come into fashion in the last few years.

But the swaggering cowhand with a handy lariat and a pair of six-shooters strapped on his thighs is unknown. Australian cattlemen, instead of roping their beasts for branding, in most cases pen them and hold them in a system of gates.

Why "Duffing" Is Rare. "Do you have any cattle rustling?" you ask.

"We call it 'duffing' here," replies the manager. "But it's very rare. Distances are too great; it doesn't pay."

One story that you hear stands out as an excellent example.

It seems that two men desired to increase their stock, so when rains had filled water holes along the way, they rode 250 miles to a station and drove off about 300 cattle. The ranch owners and police tracked the animals down and brought them back, together with the culprits.

The men were then committed to stand trial in Darwin, nearly a thousand miles away. Eventually one man pleaded guilty and was sentenced to five years' imprisonment. For lack of evidence the other man was released. But by the time he got home again he had traveled nearly 3,000 miles!

Far out in the interior, remote from railways and easy means of

transport, station homes have fewer amenities. There are no electric lights, no refrigerators. Water in canvas sacks is cooled by evaporation on the shady verandas. Yet life is pleasant, and afternoon tea is an established custom. The radio, magic destroyer of distances, brings the world's news and music to the family living room.

Across the vast region, popularly dubbed the "back of beyond," ether waves crackle in the evening with friendly chatter between neighbors perhaps 50 or 100 miles apart. For many stations are equipped with hand-operated radio sending sets.

Out here the airplane has likewise proved its worth, for flying doctors now race hundreds of miles on their errands of mercy. Now and then, too, a flying parson may drop in on a station to hold a service.

Stock Routes Well Maintained.

The government maintains a system of stock routes and tends them with religious care, for they are the arteries of a far-reaching enterprise. Across dry areas they wind and twist to touch every available spring, stream, and billabong.

Australia's land map is sketched with a number of these loopy snaky paths which radiate out to railroads and seaboard cities. One begins up in the tablelands of Northern Territory and reaches to the railheads of Longreach, Winton and Charleville to serve Townsville and Brisbane.

Another starts up in southwestern Queensland, swerves through the northeastern corner of South Australia, and follows down the western boundary of New South Wales until it contacts the railway at Cockburn, to find eventual outlet at Adelaide.

A third trail connects the Kimberley region of Western Australia with Wyndham, whose meatworks operate during the winter months. In Western Australia, too, another seemingly endless meandering line ties the railheads inland out into the interior with the expanses of Northern Territory.

On these tenuous channels, hundreds of miles in length, you see streams of steers moving out toward the ports, eventually perhaps to provide chilled beef for the London market or bully beef for British Tommies or jack-tars.

Unlike Argentina, where wild herds once roamed and men needed only to round them up, the Australian cattle industry has been built up gradually from small beginnings of half a century ago. Frozen-meat contracts have provided the impetus.

In recent years, however, Australia has seen new handwriting on her economic wall. With improved refrigeration facilities and fast ships, fresh chilled meat has come to England from the Argentine. Against it frozen meat cannot compete.

Learning to Chill the Meat. So the commonwealth has turned to its scientists to learn whether it, too, can deliver chilled beef to the London market, a distance handicap of 13,000 miles.

In the Brisbane abattoirs experts have tackled the problem. With test tubes and refrigeration chambers, and with bacterial, fungal and yeast growths under their microscopes, they are learning the conditions necessary for meat to maintain its full freshness and color during the month-and-a-half that it must be on the high seas.

Romance is in their refrigerators, which are controlled to fractions of a degree, and their pipettes reflect future profits, because these quiet workers have been remarkably successful in their experiments.

Several trial shipments of meat, sent in 1934, arrived in London without deterioration. To this heartening assurance, the operators of various meatworks quickly reacted; plants are being altered to meet the new requirements.

Less spectacular, perhaps, but doubly more profitable than the herds that roam the interior, is the dairy stock pastured in the fertile coastal belt, mainly in New South Wales, Victoria, and Queensland. Approximately a sixth of the country's cattle are bred for their milk products.

Floyd Gibbons' ADVENTURERS' CLUB

HEADLINES FROM THE LIVES OF PEOPLE LIKE YOURSELF!

"Mountain Doom"

By FLOYD GIBBONS

Famous Headline Hunter

HELLO EVERYBODY:

Samuel Johnson of Brooklyn, N. Y., has two hobbies, and one of them was bound to get him into trouble sooner or later.

Sam's hobbies are skiing and mountain climbing and two more dangerous sports I don't know of. You know what sort of a game skiing is. Anyone who has ever seen a news-reel of a bunch of ski jumpers doesn't have to be told it's a good idea to pay your insurance before you try it.

Mountain climbing is a little more than twice as dangerous as skiing. It's a yearn-of-mountain-climbing with which Sam busts into the club as a Distinguished Adventurer. For a good many years, Sam has lived abroad, chiefly in Italy.

And one day in July, 1931, way up in the Italian Alps, he had a little adventure that almost culminated in his living somewhere—neither in Italy nor anywhere else.

Climbing the Doufoure Peak.

On that July day, four Italians—a doctor, a lawyer and two engineers—along with Sam, himself, set out to climb the Doufoure—the highest and most difficult peak in the Monte Rosa chain of Alps. They started out without professional guides, for all of them thought they were sufficiently expert at climbing to get along without them. That says Sam, was the first mistake.

Sam takes time out here to explain that it was absolutely necessary to reach that peak before eleven a. m. For from that hour to one in the afternoon the sun is at its height, melting the snow and letting loose great avalanches that come crashing down the mountain-side carrying thousands of tons of rock, dirt and ice along with them.

The five men climbed until daybreak. "And all at once," Sam says, "the strenuous work we had done climbing to this point, was well rewarded by the magnificent spectacle that unfolded before our eyes. The early sun was shining on Monte Rosa and because of some phenomenon the whole mountain chain became a deep rose color—the hue that gives those peaks their name. We kept on going. By seven o'clock, after trying to make headway in snow two or three feet deep in places, we seemed still to be a great distance from the peak. That didn't worry us. From the position we were in it was next to impossible to judge distance—or even our direction. But by nine o'clock—"

Lost and Cut Off by Avalanche.

By nine o'clock that peak didn't seem any nearer than it had at seven. They knew they were lost then—and they were thoroughly frightened. They were at an altitude of about twelve thousand feet, and a night spent in the intense cold at that level was pretty sure to be fatal.

A terrific avalanche reared past them.

"To build a fire," says Sam, "is impossible. There is nothing to burn. Nor is there any other protection from the sub-zero temperature, or from the icy blasts of wind that sweep the mountain all through the night."

They climbed for two mere hours—and by that time they were all but exhausted. They stepped to rest on a ledge of rock, and suddenly a terrific avalanche reared past them at a hundred yards away. It was eleven o'clock—the deadline for mountain climbers—the time when they ran for cover if there was any cover to run to.

"The slide," says Sam, "crossed the path of the trail we had made coming up. If we had been delayed just a few minutes I rather believe our bodies would now be reposing on some glacier under a thousand tons of rock and ice. We didn't dare travel after that. From then until three o'clock we sat huddled on the ledge expecting every moment to be carried away by another avalanche. At three we started out again, trying to find the lost trail. We didn't find it—and to make matters worse, the sun was sinking rapidly and it was getting colder by the second."

Took Refuge in a Cave.

The situation was serious. Sam and his companions decided something certainly should be done about it. But what? None of them knew. They held a consultation and agreed to hole in for the night—take a chance on being alive in the morning. Three men rose to find a suitable place to dig in, but two of them lay still on the ice—too exhausted to move on.

With difficulty the others got them to their feet. Practically carrying them, they moved on across a glacier, looking for a cave. Although they didn't know it then, it was that cave that saved all their lives.

They found a cave and huddled into it. They didn't dare go to sleep. They'd freeze to death. Their food supply had run out by that time, and the gnawing pains of hunger added to their intense misery. The suffering of that night, Sam says, no one could ever describe. But at six in the morning they saw five black figures moving across the ice toward them.

The black figures were five professional guides. Down in Macugnaga someone with a pair of powerful binoculars had seen them as they pushed across the last stretch of glacier. The guides—men of remarkable endurance—had climbed all night long to reach them before it was too late. They literally carried the five men down the mountain and rushed them to a hospital, where one member of the party had a leg amputated, another a hand, and a third, all the toes of both feet. But luckily for Sam Johnson, the sawbones didn't have to do any work on him.

Copyright—WNU Service.

Cameras Barred by Village

Hating cameras and loathing photographers, villagers of Staphorst, in east Holland, have forbidden strangers to take pictures there. Two young visitors who were taking snapshots recently were knocked down and badly beaten. Staphorst is a picturesque place, the people wear old-fashioned, quaint costumes and the houses are painted pale blue. The villagers recognize all this, but resent the invasion of their privacy by candid camera amateurs.

Many Moth Families

Most people call moths butterflies, yet there are about nine times as many moth families as butterfly families. Because butterflies fly by day, while moths are night flyers, the former are common sights to the most casual observer. There are, however, numerous ways of telling them apart. Butterflies fold their wings high over their backs when at rest, while moths fold theirs down flat. Butterflies have club-shaped antennae, while those of moths are feathered.

The Chinese Li

The Chinese li, a measure of length, is the equivalent of one one-hundredth of a day's walk; on the level, this slightly exceeds one-third of an English mile, but in hilly country it might be as little as one-eighth of a mile.

Highest East of Mississippi Mount Mitchell, in the Black mountains of Yancey county, North Carolina, 8,594 feet above sea level, is the highest point of land in the United States east of the Mississippi river.

Colors of Dawn, Sunset

The colors of dawn are purer and colder than those of sunset because the reduced dust content of the atmosphere causes less scattering of the light rays.

Marijuana Cured Like Tobacco The leaves of the marijuana weed have seven or more narrow papery petals. A drying process similar to that used in readying tobacco "cures" the vicious weed for smoking purposes.

THE RIVER of SKULLS

by George Marsh

FANN PUBLISHING CO.

WNU SERVICE

SYNOPSIS

Alan Cameron, young trapper, Noel, his Indian partner, and Rough, husky Ungava dog, look in vain for the Montagnais kappers...

world, I tell you, lad! We'll own the world! "Own the world?" Alan's dark brows lifted.

"The name was strange. She's used several. It was her knowing this fellow, McQueen. Alan, those birds are not police!"

pity for Heather, and the fact that we had pledged each other our friendship," he said. "I knew what you were when I first looked into your pinched face, Alan. I knew you'd stand by. You have. Now I want you to hear my story."

"Did you believe their stories that I killed my wife?"

CHAPTER VI—Continued

Alan waited as his friend paced to and fro deep in thought. This was not the way a man would act who had been suddenly told that the police wanted him for crime.

"I told them we had met you in the headwater lakes of the Mad River. So Noel and I took them there. We always camped with water between us to keep the dogs apart. Four!"

a free man at Fort George. This McQueen—"Yes—Heather's mother," repeated McQueen, in a strained voice.

"Where's Noel?" McCord suddenly demanded, stopping his pacing. "I left him with the police in the headwater country of the Mad River. I slipped them and traveled overland with the dogs."

McCord exhaled a cloud of tobacco smoke as his eyes wrinkled in an amused look. "I ought to know him," he said drily. "I had to look at that face for two years or more."

Over two hundred million dollars of damage to clothing, bedding, carpets and furniture, is the annual moth toll in the United States, says Popular Mechanics Magazine.

"I wouldn't think about it. There was Heather, along with you, needing help. You had saved my life. It was enough."

McCord stood with hands on hips, his bold features knotted in a scowl. Slowly he shook his head. "No, she does not know, Alan. Poor kid, she does not know."

CHAPTER VII It was a happy girl who repeatedly filled the plates of the two hungry men with caribou ribs, corn bread and beans while Alan told of his trip up the coast in search of the dogs.

COMMENTS

Lewis Burke

— And R U Listenin'?

DO YOU KNOW?

"Can anyone tell me the whereabouts of Senator Perry Sears?" mentions a local Democrat.

PUZZLE

Two men kept a store for a year and made \$4800. The man who owned the store building received 40% more of the profits than the other. How much did each receive?

A well-known authority says that a man MUST have at least ten suits—and more for summer.

Note — We have three suits: Put on, Take off, and Do without.

While out riding last week, we saw two Evening Stars, one high in the heavens and another just coming up.

— Are we seeing things? No; for others said that they had noticed the same spectacle—believe it or not.

The WPA is doing some remodeling on the old Court House at Lincoln. Billy the Kid was incarcerated in the jail in this building, and shot his way to freedom. (If these walls could only speak, what stories they could tell.)

MAYBE WE'RE WRONG

We made a trip up to White Oaks last Saturday, and the romantic sign "Welcome to White Oaks — Heart's Desire" which is supposed to be facing the Highway, was turned around. Perchance the work of a mischievous boy.

THE HOUSE OF USHER?

We were shown through the largest residence in White Oaks. It was built about 50 years ago, and still is in good repair. It was erected and never occupied, due to a disappointed love affair.

The residence is strictly modern in every respect; the idea is there. The bathroom is crudely quaint — bathtub, lavatory, and toilet all piped. Fireplace in practically every room — sliding doors and woodwork made of California Redwood. It has many stained glass windows. The roof is in an excellent shape of preservation, even after these 50 years. We could write for some length about "The mansion of disappointed love," but space forbids, so we are giving the highlights. The residence is standing on a rock hill, and affords a splendid view.

Mrs. J. E. Nevarez is here from Las Cruces this week, visiting her daughter, Mrs. M. C. St. John and family.

Holm Bursum, Jr. of his ranch about 30 miles from this place, was a business visitor in town the first of the week. Holm has a force of men engaged in shearing sheep. During his stay here, he was the guest of Gunther C. Kroggel of the New Mexico Mechanical Equipment Company.

The Southern New Mexico Golf Tournament will be held at the Carrizozo Country Club on Sept. 16-17-18.

Mr. and Mrs. Salomon Sanchez were visitors here last Saturday from the Willis Lovelace ranch near Corona.
