

Dr. Eyring Speaks On The Spanish Situation

The speaker for the first assembly of the year was Dr. Edward Eyring, head of the Romance Language Department of the Normal University. His topic was recent developments of the civil war in Spain. He sketched for the audience a clear background of the social and economic forces which have influenced Spain for some three hundred years, and which are the real forces behind the present social upheaval. He stressed the inequality of the wealth distribution in Spain and the low living conditions among the poor, which had fed the flame of hatred and misunderstanding among the people. He then gave concise definitions of political terms which are in constant use in our American newspapers, and which have caused confusion in the minds of many as to who are really the "rebels," and who the government in the present struggle. The outline of the policies and platforms advocated by each of the contending factions was given. Dr. Eyring's statement that at the present time compromise between the opposing factions is impossible, was of interest to all students who have kept track, even in a small degree, of the happenings in Spain.

Dr. Eyring is well qualified to speak on this engrossing subject, and the material presented to the students was timely, useful, and thought-provoking. It is to be hoped that other assembly programs throughout the year will be of equal benefit and interest.

Dorm Dames

Now that the freshmen are all properly subservient, the upperclass women are able to devote their time to more worthy affairs.

For instance, a delightful midnight supper was held in one of the rooms Saturday night. The favored ones munched crackers and cheese, cookies and apples until the wee small hours. But oh, please don't tell Mrs. Osborn!

So many of the dorm girls went home this last week-end that the remaining ones felt lost. All except Bobbie, Raydell, Clementine and Beatrice. When they get tired of the dorm they just leave.

Edna Montgomery—moonlight and roses—Lemons—oh, yes!

Raydell and Bobbie each armed with a huge boulder were sure they could get their mouse Saturday morning, but mouse ran away, and were the girls glad!

Agnes Shattuck was hostess this weekend when her mother and brother visited her.

The dormitory was well represented at the football games Friday and Saturday. That's the spirit, girls. Never let it be said that we are lacking in school spirit and loyalty.

The next time we find Mazella Colbough without a green cap it's going to be just too bad for her!

We wonder, is Birdie Fern really dieting or is she just trying to make people think she is?

An informal dinner party was given Sunday evening, October 4, at the home of Maurice Label by Mr. Ned Purcell and Maurice Label.

For HEALTH Tuberculin Tests

Back through the pages of history is found mentioned the "great scourge"; today it is known as tuberculosis. Many advancements have been made since the sixth century B. C., but tuberculosis has survived through the centuries.

Science tells us that tuberculosis is caused by a germ, known as "the tubercular bacillus." This disease is spread in many different ways. The most common, and important way of spreading tuberculosis is by contact, which may be either direct or indirect. Other conditions of health also enter into the spread of this dread disease. Tuberculosis is spread widely in public places, where large crowds gather.

Today there is a great drive on to try and rid the world of tuberculosis. Institutions are provided for people who have contracted this disease, and a great many precautions are being taken in the schools, and other public institutions. Many schools are now giving the tuberculin test, and all positive reactors are X-rayed. Our school will be giving these tests October 12th.

It must be clearly understood that the tuberculin test DOES NOT give a person tuberculosis. This test is merely to check whether or not there are tubercular bacilli present in our bodies. The test consists of injecting a small amount of old tuberculin, that has been carefully prepared under government supervision. If there is a red spot 2 or 3 days later, it shows that the person has at some

Spanish Club Elects Officers at Meeting

The first meeting of the school year for the Spanish Club was held Monday the twenty-first. The purpose of the meeting was to reorganize the club for the ensuing school year. After brief introductions the members settled down to business. The following officers were elected: President—Enrique Armijo; vice president—Nympha Sandoval; and secretary—Lucinda Garcia.

Enrique Armijo appointed the following committees: Program committee, Arturo Gallegos and Marcelo Medina; social committee, Tito Madrid, Sara Vega and Constanza Chavez. Under the able leadership of Mr. Armijo, Dr. Eyring and Dr. Rebelledo the Spanish Club is expected to accomplish great things.

The Spanish Club is contemplating giving a Spanish Play sometime within the next three weeks. Dr. Rebelledo has not yet chosen the play but we are sure it will be better than those that were presented last year. And you all know how good they were. This play is to be offered free of charge.

time come in contact with tubercular organisms. Such cases are all X-rayed to learn whether or not these germs are active in the lungs.

Our school will be giving the tuberculin test next week. This is our opportunity. Let us take advantage of it, and find out whether or not we have been subjected to tubercular organisms. Other schools such as the University of New Mexico had 100 per cent response. Come on, classmates, let's make our response 100 per cent!

An Essay on the Cow

The cow is a female quadruped with an alto voice and a countenance in which there is no guile. She collaborates with the pump in the production of a liquid called milk, provides the filler for hash, and at last is skinned by those she has benefited, as mortals commonly are. The young cow is called a calf, and is used in the manufacture of chicken salad. The cow's tail is mounted aft and has a universal joint. It is used to disturb marauding flies, and the tassel on the end has unique educational value. Persons who milk cows and come often in contact with the tassel have vocabularies of peculiar and impressive force.

The cow has two stomachs. The one on the ground floor is used as a warehouse and has no other function. When this one is filled, the cow retires to a quiet place, where her all manners will occasion no comment, and devotes herself to belching. The raw material thus conveyed for the second time to the interior of her face is pulverized and delivered to the auxiliary stomach, where it is converted into cow. The cow has no upper plate. All of her teeth are parked in the lower part of her face. This arrangement was perfected by an efficiency expert, to keep her from gumming things up. As a result she bites up and gums down.

A slice of cow is worth 8 cents in the cow, 14 cents in the hands of packers, and \$2.40 in a restaurant that specializes in atmosphere.

Several sweet and encouraging letters have been received from our dear, departed but never-to-be-forgotten last year's Editor of the "Candle." It appears, upon looking back, that we didn't fully appreciate our busy red-head, smiling Ray Graham, who lit the Candle faithfully every two weeks, and didn't even equal it this ungrateful public bit his finger about his juicy scandal column. He did a grand job—only hope that we was can keep up the reputation he established for us. An' we hopes too that he gets a copy of this in far-away Central, where he is holding the "Lamp of knowledge high" for some appreciative students.
