BORING FOR OIL

Conditions Under Which It May be Found and How.

Richmond Times.

While oil has been mainly found in Silurian and Devonian formations, it frequently occurs elsewhere. Porous beds of sandstone serve as the best reservoirs. Drilling in a number of oil fields has disclosed the fact that the oil bearing sands usually lie in three distinct layers, known as the first, second and third sands, the distances between them varying from 35 to 100 feet. In some instances a fourth sand has been found.

The very uncertainty of the oil trade, which has been most extraordinary giving a meaning to the American phrase "striking oil," has brought to the business of oil boring a charm and fascination peculiarly its own.

On one occasion a well was bored and no oil found. The apparatus was drawn out and later steps were taken to widen the hole a half an inch in each direction, preparatory to boring deeper. An enormous vein was struck. The boring apparatus had just missed the vein and as later borings proved that there was nothing below, the well would have been a failure but for the suggestion that it be slightly enlarged for convenience in boring deeper. Another well in that same locality was bored, flowing a large amount of oil; but by the time tanks had been built to collect it the oil had altogether disappeared. The deepest well in the district, more than 1,000 feet, yielding no oil whatever. And altogether only 15 per cent of the borings were successful.

One of the most remarkable wells in the earlier history of the century was sunk in 1852 near Burkeville, Ky. The proprietor was boring for salt. The discharges were by profuse floods at intervals of from two to five minutes. The flow continued in the city for a month or more and then settled down to a steady stream, running many thousands of gallons a day, and flowing out over the surface of the Cumberland river, and reaching a distance of a hundred miles. A boy set fire to it and the effect was grand beyond description, the flames rising from the surface of the river to a height far above the trees and affording literally the spectacle of a river on fire.

The section of Pennsylvania, Ohio and West Virginia, known as the "oil region" before the "oil fever" of 1859 and the years following, was an almost unbroken forest. A few farms and cultivated tracts dotted the valleys and bottom lands. After the discovery, as though by magic, the landscape became dotted with countless derricks, towns springing into existence, land sold for fabulous prices, fortunes were suddenly made and recklessly lost, and railroads quickly pushed into regions hitherto unknown, save to the pioneer, trapper or hunter.

It was soon found that many wells became clogged or ran dry from exhaustion. In 1862 Col. E. A. Roberts conceived the idea of exploding torpedoes at the bottom of the walls of the well and if possible securing a further flow without new sinking. The success of this theory created a new excitement. Many patents were filed, innumerable lawsuits for infringement instituted, ending finally in victory and fortune for Col. Roberts. The method of exploding was to sink a flask containing the explosive to the bottom of the shaft, fill the

well with water and explode by electricity, or a weight fastened to a wire.

A photograph taken immediately after an explosion by flash-light apparatus let down the well showed a forced space of some thirty feet in diameter with oil dripping heavily from every part. The expense of Roberts' torpedoes led to their use by stealth in many localities. The parties who entered upon the business were called "moonlighters" and in the detective shadowing and resistance involved many murders resulted.

The operation of drilling a well was formerly very slow and expensive. A well can now be drilled 2000 feet at one tenth the cost and in less than one tenth the time that was required when the Pennsylvania oil regions were first explored. The mod-

ern system is practically the same as the ancient Chinese system described by Huc, with the exception that steam power is used instead of manual power, which was transmitted through springing boards.

A square frame derrick about eighty feet high, measuring twenty feet at the bottom and three feet at the top, is erected. The cable to which the string of boring tools, fifty to seventy feet in length and weighing from 2,000 to 3,500 pounds, passes over a pulley at the top of the derrick. The outside end of the cable is only for use on a windless when the boring tools are to be moved from the well. The perpendicular motion of the tools for boring is given by the cable's being attached at

the mouth of the well to a walking beam, operated by a steam engine in similar fashion to the walking beam of the common side wheel river steambot.

This beam successively raises and lowers the tools which pound the rocks into fine fragments. Every five feet the tools are raised out of the well and the debris removed by means of a sand pump.

The cost of drilling depends upon many varying circumstances. In Ohio and Indiana wells have been drilled 1,000 feet for \$1,000. In Pennsylvania a 2,000 foot well varies from \$3,000 to \$3,500.

The depths of wells depends upon the relative position of the surface to oil rock. During the first twenty years of their business Pennsylvania wells averaged 900 feet. Since that

weights of equal volumes of the two bodies, and to choose water as the unit of comparison or 1, when all the oils arrange themselves below the latter figure. The Relative weights thus arising are known as the specific gravities of the oils, and offer a means of judging approximately about their constituents.

Crude petroleum is liquid varying in specific gravity (or density) from 0.73 to 0.97, at the wells, that of Pennsylvania ranging between the figures 0.78 and 0.83, while the natural Colorado product varies in that regard from 0.72 to 0.95, as far as experience reaches. In order to render this point more clear, by comparison, we will add, that resin oil possesses the high specific gravity 0.998, while commercial castor bean, and hence a purely vegetable oil, has, as a rule, a specific gravity lying between the figures 0.960 and 0.964.

As a general conclusion drawn from the observations enumerated above, there remains to be stated, that the specifically lightest oils are the most volatile, and that those of higher specific gravity are to be considered as illuminants and lubricants. In order to facilitate the establishment of these points, instruments, known as hydrometers, have been introduced, which frequently have a compound scale, showing the Beume divisions for light liquids at a temperature of 60 degrees Fahrenheit, or 16 degrees Centigrade, ranging between 10 and 70, and specific gravity scale beginning with 0.700 and ending with 1.000, the intervening space having been divided in convenient sub-divisions. When the instrument is immersed in a glass cylinder filled with distilled water, it sinks to 1,000 of the specific scale and 10 of the Beume scale, respectively, and if the cylinder is filled with an oil and the instrument inserted, it sinks to any of the points lying between the figures 10 and 70, and 1,000 and 0.700, the latter number being the lowest of the scale. On the other hand, the inflammability of an oil is conditioned by the amount of volatile constituents contained in it, so that an oil, in which the latter compounds prevail, ignites more readily and has, therefore, a lower flashing point than oils consisting of illuminants of high boiling points. This circumstance is taken advantage of to ascertain its safe application for burning or lighting purposes in lamps, since an oil of a very low flashing point is liable to form explosive mixtures with the air enclosed above the level of the oil in the lamp, and thus to cause accidents of a severe nature. In order to prevent such occurrences, legislative restrictions have been placed upon the burning of these lighter hydrocarbons, the flashing point for illuminating oil having been fixed by legislative act for Denver as 110 degrees Fahrenheit, or 43 degrees Centigrade, so that no petroleum having a flashing point lying below this figure can be brought into market without running the risk of penal punishment following such illegal procedures. —Written for "Mines and Minerals," by Dr. Julius Ohly.

Millions For Irrigation.

Commissioner Herman estimates that the receipts from land sales for the fiscal year ending June, 1903, will approximate \$6,000,000 in the fund that may be made immediately available for irrigation purposes.

The commission reports that the demand from homesteaders for western lands is increasing very rapidly and that the fund will grow from year to year at the rate of about \$5,000,000.

Eagle Block, White Oaks Avenue, Aug. 1902.
White Oaks, N. M.

The Way in Which the Qualities of Oil are Determined.

All oils, whether of vegetable or mineral origin, are lighter than water, and consequently float on the latter when poured upon or mixed with it. The circumstances has induced scientific men to compare the

RESULT OF BOER WAR

Present Conditions Point to a Sort of United States.

Agencies Actively at Work for the Rehabilitation of the Two Ex-Republics—American Ideas Prevail.

There are two republics less in the world than there were in 1899. This is one of the results of the war which has just been brought to a close. An elaborate scheme of federation, in which the people of the subverted governments will have local self-rule at an early day and be in a league with the rest of the British possessions in their quarter of the world, is to be established. This is another outcome of the same conflict, and one which was not expected by many persons at the outset. Some of the Boer fighting chiefs who have laid down their arms have been to London on a mission connected with the settlement of the terms of surrender. They were entertained by representatives of the British government, and there can be no doubt that the visit will be a pleasant episode in their lives. As one of the results of the present rapprochement between British and Boers the Afrikaner-Bond, which is a sort of a league between all the Dutch residents of Africa, is to be dissolved, says the St. Louis Globe-Democrat.

The agencies which are certain to make the rehabilitation of the two ex-republics speedy and pleasant are actively in operation. A large portion of the population of both of them will be British, Americans, Germans and other non-Boers. Necessarily these persons will get the same sort of treatment as the Boers, and they are vitally interested in having the disabilities of the latter removed at the earliest possible day. The crown colony status would be even more objectionable to the Americans and Englishmen residing in the two Dutch states than they would be to the natives themselves, and they have a strong incentive for making the transition to full self-government as short as possible. Already some of these persons are presenting this side of the question in the leading London newspapers. This is a side which will appeal with force to the British ministry. The ministry has a special reason to want to win the favor of the Boers, and the way to do this, as it well knows, is to make their political conditions as agreeable to them as possible, and to do this at the earliest practicable moment.

Thus all the conditions point to the creation of a sort of United States of Africa among the different British colonies which are contiguous. England's possessions in the whole continent of Africa, counting Egypt, which nominally belongs to Turkey, but which has been administered for many years by England and which she will never give up, aggregate about 3,000,000 miles in area, or about the same as that of the United States, exclusive of Alaska and the islands acquired in 1898. About half of this area is in South Africa, most of it being contiguous. The purpose evidently is to establish a union between all these contiguous states on the Canadian and Australian plan, in which each will be practically independent in local affairs and have a voice in matters pertaining to the whole federation. This will be a sort of United States of South Africa, closely following the American model, which has a great vogue among British and British colonial statesmen at the present time. American ideas are making their triumphant way around the world. There will be regrets for the overthrow of the two little republics, but their people are accepting the situation with courage and intelligence, and the new regime which will soon set in will eventually give them almost as much liberty as they had under the former condition, and at the same time give them a contact with the world which will materially advance their social and industrial status.

THE WEATHER MAN.

How He Knows When It Is Going to Storm or Clear.

Official Map Made Up from Reports from Observation Stations in Cities and Towns of the Country.

Strictly speaking, our weather bureau is made up of a great many buildings scattered all over the United States, and the one at Washington is the central station that governs and directs the smaller ones, and to which they send in their daily reports; for it is by getting reports from all the different sections of the country that Uncle Sam's weather-makers are able to make their predictions. There are 180 towns and cities in the United States where there are observation stations, having the same instruments and apparatus as the Washington bureau. Now, the observers at these 180 stations do not spend their time waiting for spiders to crawl out of their holes or looking at the sky to see whether it is red or gray in the evening. They look at their thermometers, barometers, anemometers, and so on, which are far better guides than all the other signs put together.

At 8 o'clock in the morning and at 8 o'clock in the evening of every day the observer at each one of these weather stations from Maine to California looks at his different instruments, and carefully notes what each of them marks. Then he takes a look at the sky, to see whether it is fair or raining or snowing, and to see what sort of clouds may be sailing about. According to the weather bureau there are seven different kinds of clouds, and it is important that the observer should see what particular kind is hovering around, for each kind means some special kind of weather or some particular state of the atmosphere. When he has finished his observation and noted all the indications, he telegraphs his report to Washington.

In that way, then, the Washington station receives an account of the weather at all parts of the country at the same time, and, as you may easily believe, it keeps the four telegraph operators busy receiving the messages that come pouring in soon after eight o'clock. As each message is received in the telegraph room it is carried by a messenger across the hall to the forecast room, or room where predictions are made, and handed to the translator. As the translator reads aloud the cipher reports from the different stations, other men in the room mark what he reads upon a map of the United States, so that when the last message has been translated the map shows just what the weather is at each one of the 180 stations. The map is then turned over to the official who is to make the predictions. In order to get his bearings, he traces across the map the different places throughout the country where the temperature is the same and the places where the barometer is the same. The one he marks with red lines and the other with black lines, and if you will look at the weather map you will see these red and black lines wriggling and twisting all over the country.

When the reports from the northwest show a great fall in temperature, he knows that a cold wave has started on a journey through the United States, and he keeps a lookout to see how fast it reaches the different stations in the west. Then he calculates how rapidly it is moving and what kind of weather it has to encounter, and perhaps, when he has worked out the problem, he will telegraph the following bulletin: "Hoist cold wave flag; thermometer will fall 30 degrees in next 24 hours," and, sure enough, by next day Jack Frost has got hold of our noses and toes, and the cold-wave flag is almost tearing itself to pieces with delight. But sometimes the cold wave does not come as was expected—it is switched off on a sidetrack or it melts on the way—and then the cold-wave flag

\$375 or Letters from Farmers.

The Rock Island System offers \$375, in cash and transportation for letters relative to the territory along its lines in Arkansas, Indian Territory, Oklahoma, Texas and New Mexico.

Letters should deal with the writer's experiences since he settled in the territory in question. They should tell how much money he brought with him, what he did when he first came and what measure of success has since rewarded his efforts.

Letters should not be less than 300 nor more than 1,000 words in length and will be used for the purpose of advertising the Southwest.

For circular giving details, write John Sebastian, Passenger Traffic Manager, Rock Island System, Chicago, Ill.

POSTOFFICE: WHITE OAKS, N. M.

LOCAL and PERSONAL NEWS.

W. S. Peters is at Hotel Baxter.
Charles Brown was in the burg from Nogal.
Thomas Walsh has moved into the Rudj-sille residence on the north side of town.
J. A. Gumm is employed at the assay office of the Eagle Mining & Imp. Co.
H. L. Decker piano tuner and salesman, traveling for the Waltz Co., El Paso, was at the Baxter several days this week.
Allen Hightower and C. F. Goddard have traded ranches. Hightower now lives near Ancho.

A. A. Ririe of Bonito, student of the Military Institute at Roswell, has been promoted to be second lieutenant.
R. P. Pope will preach at the White Oaks Baptist Church every fourth Sunday in each month.
Geo. E. Sligh, Sec. and Treas. of the Free Gold Mining and Milling Co., was here on business Monday.

Forest Smith and Charles Middaugh, passed through Wednesday en route to Jicarilla.

Philetus Smith, the Chicago attorney, interested in the Hawkeye gold group in Jicarilla, has returned from Chicago.

Judge Freeman, of Carlsbad, J. E. Wharton, Thomas Jacobs and others are bear hunting in the Oscura Mountains.

Judge Freeman, of Carlsbad, was in White Oaks Monday, the guest of J. E. Wharton.

Sam Neid was over from Nogal last Monday. He will return home in about two weeks to begin work in his line again here that will keep him busy most of the winter.

The Eagle Mining & Improvement Co. had a pay day here Saturday and the boys are all happy and move like they could hit a drill as hard as a regulation "Rand."

Connections have this week been made between the old and the new shafts at the North Homestake. As much working force as the ore conditions warrant may now be put on. A mill run will be made soon.

J. M. Rice was over from Parsons Wednesday. Charles Elley Hall and his mother, went to Parsons with Mr. Rice to join the family in Thanksgiving festivities.

Plymouth Church

At Plymouth Church next Sunday Nov. 30, Dr. Miller will preach in the morning at 11 o'clock, subject, "The Life Passion of a Great Man" at night 7:30 o'clock, "The Great Invitation and Welcome."

Every body is invited to attend these services.

Rev. R. P. Pope, Nogal, preached here at the Baptist church Sunday morning and evening. Rev. Pope and family have recently returned from a trip to Texas. They traveled overland the entire trip to Texas and return, hoping thereby to improve Mrs. Pope's health. They now reside near Nogal.

Chris. Yaeger, the rustling prospector, well known throughout this mining region, made a hurried business trip here from Lordsburg last week. He has valuable copper claims here in Lone Mountain and met parties from New York here to show them the properties. He thinks permanent development will begin here in a short time. He is soon to return to White Oaks.

We are still selling Greely Potatoes at 2 cents a pound, by the sack.

Handkerchief Bazaar and Rummage Sale.

It is gratifying to see the vim and enterprise of the ladies of the Baptist church who have started in to raise funds to build a Baptist church. This campaign of enterprise will begin in earnest next Wednesday, when the Handkerchief Bazaar and Rummage Sale will be started at the Baptist Hall, in the upstairs of the postoffice block.

Many little articles prepared by the ladies of this church, and others who are interested in the building of the church, will be arranged and offered for sale.

Baptist Minister.

Rev. W. J. Wright of Pagosa Springs, Colo., has been assigned to this Baptist church for the coming year, beginning with the first Sunday in December, at which time he will preach morning and evening at the Baptist church. Rev. Wright is spoken of very favorably by those who are acquainted with his ability as a preacher. The Eagle has been requested to say that everybody is invited to hear Rev. Wright in his introductory sermon.

Methodist Church.

The children will be much in evidence Sunday. Pastor Hamilton will preach specially to them at 11:00 o'clock. Their parents and friends are invited to be present. In the evening there will be a Missionary Rally service in which the children will lead with songs and recitations. Mrs. Leigener and Miss Nettie Lee have devoted much time to the training of the little ones and no pains have been spared to make this service a success. You will regret it if you miss it.

D. I. Gelder, of the firm of Gelder's & Co., Chicago jewelers and diamond brokers, is at the Baxter. Mr. Gelder is interested with the Eagle Mining & Imp. Co. and the American Gold Mining Co. He has been a guest of Mr. Rice at Parsons for several days and came over from Parsons Tuesday afternoon. Newton Ellis of Canton, Ohio, also a guest of Mr. Rice is with Mr. Gelder and likewise a stockholder in the Eagle and American companies.

COMERY OIL COMPANY.

Permanent Organization Effectuated and Officers Elected

INCORPORATION PAPERS FILED.

Enthusiastic Meeting With Many Subscribers to Stock of the Company Present Three Hundred Thousands and Shares of Stock to be Issued.

As per announcement in last week's Eagle a meeting for the organization of the Comery Oil Company was had at the Congregational church Monday night. After plans of organization were explained, articles of incorporation drawn and agreed to, those present who desired to subscribe for a thousand or more shares were asked to sign for amounts previously agreed to between them and the incorporators, stock to be issued after charter is granted and the company is ready to receive and receipt for amounts taken.

Ninety-one thousand shares were disposed of in this manner at 1/2 a cent a share, the receipts for same to go for immediate expenses of the company. One hundred and nine thousand shares were reserved by the incorporators and one hundred thousand shares treasury stock are to be offered at 10 cents a share for general development purposes. These sums total three hundred thousand shares of one dollar each being the amount for which the company is incorporated.

The incorporators are Harry S. Comrey, John A. Brown, Arthur P. Green, Frank J. Sager and S. M. Wharton.

The officers of the company are Harry S. Comrey, president, John A. Brown, vice-president, Arthur P. Green, secretary and treasurer.

More interest is being taken in this enterprise by home people than we have ever before witnessed in White Oaks. Several hundred dollars have already been subscribed for our stock and is available as soon as the company is prepared to issue it, and when it is understood that this treasury stock is obtainable it is going in a hurry.

The secretary of the company is now in correspondence with manufacturers of oil well machinery to obtain prices of etc. etc.

A complete plant for treating Zinc and Lead well be installed at the Cerillos Smelter.

Regular Correspondence.

Election went off very quietly. Mr. John Owens received a majority of 19 votes in this precinct for the office of sheriff.

An exceedingly pleasant dance was given at the Kimbrell Hall on election night, Judge Kimbrell donating the use of the hall on the strength of the "rooster" ticket.

Mr. Cole, who recently purchased the Guse place, has just brought in about 500 cattle to range on the creek. He is also making general improvements on his dams and ditches.

The measles which were not expected to amount to anything seem to be more serious than expected. Thirty-two of the school children were sick at one time. Few cases existed, however, outside of the school.

The case of Mr. Klasner vs. Mr. Lumbrey was tried before justice of the peace, George Kimbrell, resulted in a verdict for the defendant, the court refusing to place defendant under peace bond.

The report comes of new purchases in the Analla settlement by Mr. Hyde, but we have been slow to learn the particulars.

Mrs. Klasner is visiting her brother, Mr. John Casey and attending to business in Lincoln.

A masquerade ball was arranged at the Junction school house last Saturday night. We wish to express our thanks for the hospitality shown us.

Trial of New Air Ship.

The new airship built for Pierre and Paul Lebaudy was tried near Nantes on Nov 13. The flying machine, after making revolutions in every direction over fields and woods, bordering the Seine, says the Scientific American, returned each time to place of starting. The Lebaudy ship is similar to and about twice the size of the Santos-Dumont. It was first tried on November 8, when it was successfully operated for half an hour. It now really begins to dawn on the world that the airship is a future possibility.

Safe Crackers at Albuquerque.

The jewelry store of S. Vann & Sons of Albuquerque was broken into last week and \$10,000 worth of jewelry taken. The goods stolen were, 238 gold watches, over 1,000 rings of various kinds, and set with all kinds of jewels, and a package of diamonds just received, valued at \$500, 75 diamonds in stock and \$125 in cash.

Even the Santa Fe New Mexican acknowledges that the Statehood Committee found much that is against the admission of New Mexico.

English Orthography.

Aren't you glad that you are to the "manner born" when it comes to speaking the English language. What a puzzle the following two stanzas must be to one who is just learning our language:

There is a farmer who is YY
Enough to take his EE,
And study nature with his II,
'And think of what he CC;
He hears the chatter of the JJ
As they each other TT
And sees that when a tree DKK
It makes a home for BB.

A showman to the jungle went
And caught a fierce young gnu;
Said he, "I'll teach him to perform
And sell him to the zoo."

This man was very much surprised,
And quite delighted, too,
For, lo, each quick and novel trick
The new gnu knew.

Notice.

Probable Origin of Petroleum.

It is of practical importance to the oil prospector to know the probable origin of petroleum. This interesting subject we cannot discuss at length, but the theory propounded by Prof. Joseph Le Conte and A. S. Cooper, former state mineralogist of California, both of whom have had abundant opportunities in those field experiences which are often such necessary counterbalances to the theoretical results of the chemist's laboratory, appears to us the most reasonable, viz: that petroleum and bitumens are principally derived from terrestrial and marine vegetation deposited in sedimentary strata, then changed to carbonaceous matter and afterwards distilled by the heat of metamorphism. We would emphasize here particularly 'marine vegetation' to counteract the popular idea that petroleum or so-called 'coal oil,' has much to do with ordinary coal deposits, which were formed by ancient peat mosses and land vegetation. In these petroleum is rarely found, but the world over occurs, for the most part, in strata and periods of strictly marine origin and with few or no coal beds. Anyone who has lived by the seaside knows how prolific the sea is in vegetable as well as other forms of organic life. Anyone who has peered down from a vessel into the ocean depths knows the vastness, size, rampant growth, and abundance of the seaweeds in those 'wild ocean moorlands.' Whilst terrestrial vegetation, peat mosses and the like, formed the coal beds, these unctuous, gelatinous seaweeds doubtless give us, after various geological and chemical changes and distillations, the fossil bitumens, asphaltum, and petroleum we find in the rocks.—Prof. Lakes in "Mines and Minerals."

DeMeir a Locator.

J. R. DeMeir was the first locator in the Pastura oil field just opening. DeMeir will be remembered as the lucky individual who discovered the Phosphate deposits near Lava Station, on the Santa Fe Railroad a few years ago, and who recently sold out for a handsome fortune to the California Guano company. DeMeir has a large tract of oil lands adjoining the location on which the Pastura, or Solado strike was recently made. The latest information from Pastura is that oil is standing more than a hundred feet in the well. Excitement is now running very high there and people with money to invest are coming in from various places looking over the field. Mr. DeMeir lives at Las Cruces.

Democrats Win Out.

According to the face of the returns the Chieftain's ticket was defeated. This paper has already expressed itself as opposed to any contest of the election. However, the defeated candidates have a legal right to bring a contest if they choose to do so. Nevertheless they as well as everybody else should abide loyally by the result.—Socorro Chieftain.

According to the returns published in the Chieftain, Nov. 22nd, election certificates have been issued as follows: Sheriff, L. Baca, democrat, majority 304; Col. and Treas., H. G. Baca, independent republican, majority 87; Clerk, B. A. Pino, democrat, majority 242; assessor, Benj. Sanchez, democrat, majority 319; Probate Judge M. Miera, democrat, majority 204; Supt. of Schools, A. C. Torres, democrat, majority 75; Surveyor, W. W. Jones majority 370, Commissioner, 2nd dist., A. Contreras, democrat, majority 87; 3rd dist., C. Padilla, democrat, majority 226.

Official Paper Lincoln County.

THURSDAYS \$1.50

THURSDAY NOV. 27, 1902.

Leslie's Representative.

Charles Elley Hall, General Staff correspondent of Leslie's Weekly, has spent the week in White Oaks. He was here for the purpose of collecting data for the first of a series of articles he is to write for Leslie's Weekly on the "New Southwest." From what we have learned of his plans, the article on the White Oaks country will certainly result in great good to us.

Leslie's has 90,000 weekly circulation, and the paper's subscribers are among the best people of Europe and this country. It also goes into the offices of the leading newspapers and trade journals of both countries. Hence, such information as is now being compiled by Mr. Hall, descriptive of the resources and possibilities of the White Oaks country, must necessarily bring good results, as he, through Leslie's Weekly, will reach people it is impossible for us to get at. He is a direct representative of that publication and through years of experience is probably the most thoroughly fitted of Leslie's entire Staff for this kind of service. In his series of articles on the "New South," he has been highly praised and his plans endorsed by all industrial concerns of the states he has visited.

What our country needs is truthful publicity and from what we know of his intentions here, he is going to give us just this kind of an article.

It doesn't seem to be Leslie's object to make money out of this class of service, but rather to acquaint the people with the merits of the paper after which a reward is expected through an increased and permanent patronage.

Mr. Hall has met with the kindest treatment among our people, most of them aiding him, where possible, in the collection of such information as he desired for his purpose.

MINER'S HOSPITAL.

A Miner's Hospital will probably be located in some part of New Mexico during the coming session of the territorial legislature; since Lincoln Co. has never had any legislative favors from this source we can urge with vigor our right to this institution to which we are so justly entitled. There is a greater number of men engaged in the occupation of mining in Lincoln county than in any other county of the territory, and our county is most favorably located for this institution.

It is a matter of necessity that our people immediately manifest an interest in this piece of legislation and mature plans to aid by the best means possible our representative in carrying it to a successful conclusion.

NEWSPAPER MAN CHOSEN.

Hon. Nestor Montoyo, editor La Bandana Americana, Albuquerque, was elected by a large majority to the House of the territorial Assembly to represent Bernalillo county. Montoyo is a Candidate for Speaker and will likely have no opposition. He has filled the position of Court Interpreter in the second judicial district for many years and is said to be a finished scholar.

YARDS ARE COMPLETED.

Torrance Now Looks Like a Junction Point—Grading is Being Pushed.

The yards at Torrance have been completed as well as the grade for five miles northwest of there. The work is very heavy and slow. The grade has been completed from here south for a distance of 45 miles is being pushed. The graders are now about ten miles north of Moriarty and when they pass that point there will be 60 miles of easy work.

A MULTIPLICITY OF ROBBERIES.

There has been more hold-ups during this month than has ever been before recorded in the same length of time in this country. Trains have been robbed, safes cracked and business and private houses broken into all over the country, and in many instances large amounts have been taken. The Rock Island railroad company lost last week, in one hold-up, \$20,000. The whole train crew were captured and the express safe opened and robbed.

An old volcano in Utah, for centuries silent, has broken out afresh. We will keep an eagle eye on the Mal Pais.

One of the new fads is men's socks for women. There is a rumor prevalent that some wives wear the trousers, but no one imagined that the socks would also be appropriated. If the women continue the invasion of the wardrobe of the men, there will be mighty few articles of wearing apparel that man can call his own. His hat, shirt, vest, coat, collar, tie and socks are gone. He has remaining his chewing tobacco and suspenders—not much of a lay-out for a cold day.—Western Publisher.

Mary had a little lamb; that time has passed away. No lamb could follow up the gait that Mary goes to-day. For now she rides on air shod wheels in skirts too short by half; no lamkin shares her airy flight but you can see her calf. But who is there that can complain or cry in woe. "Alas!" So long as Mary's calf's all right the lamb can go to grass. So all the men delight to gaze, their joy is not a sham, for while the other critter's out they have no use for lamb.—Western Publisher.

A prominent stockman en route to Kansas City the other day was complaining of feeling badly, and he was coughing a great deal, was asked if he had caught cold. "No," he indignantly replied, "I am just off the Santa Fe, and I would like to see the color of a man's eye who could catch anything on that road. I may have a bad cold, and doubles have, but I did not catch it on the Santa Fe. It just simply overtook me," and he settled down in his seat with the air of a man who had at least partially relieved his mind.—Colorado Stockman.

After studying the money question through the gold rimmed spectacles of American Capital Mexico has decided to continue business on the silver basis. Let good enough alone is Mexico's financial policy. Mexico is prosperous and advancing rapidly. A worthy successor to President Diaz is of more importance to Mexico than a change in national finances.

Have you noticed that all our Republican papers have begun to account for how it happened? No hedging goes on the statehood question boys! Remember you told us before the election that Rodey's election would bring it, now deliver the goods.

The reign of martial law has been lifted in South Africa, and the country is again peacefully employed.

The city of Las Vegas is feeling its oats. She is to introduce to other "alive" towns in New Mexico, the first electric street railway.

Tucumcari wants a new county created out of Guadalupe and a county seat located at Tucumcari.

THANKSGIVING.

Thanksgiving Day! Your voices raise To God on high in hymns of praise.

The fruitful yield Of vine and field Has brightened all over earthly ways, Give thanks to God who rules on high For welcome rain and sunny sky,
For peace and love Praise God above, And all His mercies glorify!
Thanksgiving Day! Praise God and sing Till every vale and hill shall ring.

Thanksgiving Day! From work apart Let mankind come, From field and mart Let anthems rise To praise the skies To prove the thanks within each heart. Give thanks to God for mercies shown, And kneel today before His throne.
For peace and joy Without alloy

The loving Father's kingship own. Thanksgiving Day! Let ev'ry voice Show how our grateful hearts rejoice.

Thanksgiving Day! Forget not those Who know naught save life's bitter woes. Be not delayed— Give them the aid

That brother unto brother owes. Lift up the brother bowed by care, Divide your blessings everywhere; The highways scan For fallen man

Who needs the help that you may share. Thanksgiving Day! Give from your store To aid the hungry, sick and poor.

Thanksgiving Day! From distance wide Let loved ones come to sit beside The festal board Whose joys afford

Long hours of love whate'er betide, Give thanks to God for earthly ties; For love that beams in shining eyes. Sing songs of praise Until your lays Are echoed back from vaulted skies. Then at God's throne kneel down and pay Your homage this Thanksgiving Day!
—Will M. Maupin.

A. B. Fall's majority according to Secretary Reynolds' count, in the 9th district is only 40. Fall needed the 100 unregistered sworn in votes at Alamoograde.

Farmers near Hagerman will put out 11,000 apple trees this season.

GREEN-CORN DANCE.

An Annual Celebration of the Seneca Indians in the Hills of Their Reservation.

The annual green-corn dance of the Seneca Indians was recently held in the hills of their reservation, 25 miles east of Vinita, I. T. The Senecas number about 200 people, and they hold many different celebrations during the year, among which are the strawberry feast, supper for the dead, dance for rain, war dances and the green-corn dance.

The dance occurs every year at the drying up of the corn, and the time is fixed by the Seneca Indian council. The chief and six members of the council meet and make preparations for the green-corn dance by appointing a medicine man and a number of hunters to secure wild meat for the occasion. A hunt is made, and when the hunters return the dance takes place.

The Indians meet under their large shed or arbor and early in the morning the leader of the band or medicine man makes a speech, standing in the center of the shed, and talks in a slow and solemn voice. At intervals he puts small bits of ground leaves from a plant sacred to the Senecas on a slow-burning fire, and as the smoke and the fumes rise he makes his prayer, believing that the smoke conveys the words to the Great Spirit. After these proceedings are over dinner is ready and the meal is served by waiters under the shed. In the afternoon the dance commences in the old-fashioned Indian style and continues for several days.

MOTHERHOOD

The greatest ambition of American men and women is to have homes blessed with children. The woman afflicted with female disease is constantly menaced with becoming a childless wife. No medicine can restore dead organs, but Wine of Cardui does regulate derangements that prevent conception; does prevent miscarriage; does restore weak functions and shattered nerves and does bring babies to homes barren and desolate for years. Wine of Cardui gives women the health and strength to bear healthy children. You can get a dollar bottle of Wine of Cardui from your dealer.

WINE OF CARDUI

143 Market Street, Memphis, Tenn., April 14, 1901. In February, 1901, I took one bottle of Wine of Cardui and one package of Theodor's Black-Draught. I had been married fifteen years and had never given birth to a child until I took Wine of Cardui. Now I am mother of a fine baby girl which was born March 31, 1901. The baby weighs fourteen pounds and I feel as well as any person could feel. Now my home is happy and I never will be without Wine of Cardui in my house again.
