SEEK RARE WILD ANIMALS FOR ZOO

Expedition Will Go to Jungles of Africa.

Washington.—Judging from the number of requests that have reached the Smithsonian Institution for further information about the Smithsonian-Chrysler African expedition which will spend the spring and summer in the jungles of Tanganyika collecting wild live animals of rare species for the National Zoological park in Washington, the expedition has aroused greater popular interest than any similar Smithsonian undertaking since the famous Smithsonian-Roosevelt African expedition of 1906.

The two expeditions will go down in Smithsonian history as entirely distinct in purpose and doubtless in accomplishment. The Smithsonian-Roosevelt expedition brought back specimens in wild game for stuffing and mounting in the National museum, where today they are the most popular museum exhibit in the national capital. The venture which is now made possible through the generosity of Walter P. Chrysler will seek to capture and bring back live animals in greater variety and of rarer species than ever before attempted.

Dr. William M. Mann, director of the National Zoological park, which is under the direction of the Smithsonian Institution, will lead the expedition. He hopes to capture animals which have never been seen alive in this country, and to install them at the National zoo.

The popular interest that is being shown in the Smithsonian-Chrysler expedition is scarcely surprising when it is recalled that more than 2,000,000 persons from all over the United States visited the National Zoological park last year. In this number were pupils from more than 200 schools, who came with their teachers to study natural history. These included not only Washington schools, but the higher grades of schools in many sections of the country which now make annual spring pilgrimages to Washington a part of their regular courses of instruction.

TALL MINE HOIST

The highest hoisting tower in the world, at the state mines of Mauritz, Holland. It is 53 meters high, or more than 165 feet.

Sell Love Letters of

Victor Hugo for \$700

Paris.—One of the most remarkable collections of love letters on record—more than 15,000 of them—written by the former actress, Juliette Drouot, to Victor Hugo between 1833 and 1835, brought less than \$700 when put up at auction recently.

This actress, whom Hugo loved, retired from the stage and lived a life of seclusion for 50 years. Almost every day during that period she wrote the noted author a letter, as he had asked her to do, although they were seeing each other regularly as well, and this collection, an average of some 800 letters a year, was carefully preserved at the express wish of Hugo himself.

Victor Hugo spoke of these letters in one of his letters to Juliette, in which he said "our life is there, recorded day by day, thought by thought. Every dream of mine, every suffering, is there. Those letters are so many charming little mirrors, each one of which reflects a view of thy splendid soul."

Gustave Simon, who, as executor of Victor Hugo's will and personal friend of Juliette, ought to know, says that the letters will disappoint any one in search of a thrill, as they are nothing but a collection of empty phrases, "full of adulation and adoration, far from giving that redolence of the inner life of the lovers," that the sale catalogue promised.

Prunes!

Palm Beach, Fla.—When in a normal mood wear a blue-green shirt; when despondent a black one; when fatigued a blue one, advises Van Reinsseier Frayn, New York artist.

Bar Whiskers

Rome, Italy.—Cab drivers and taxi chauffeurs are forbidden to wear whiskers. An edict says whiskers are incompatible with the dignity of citizens.

DIAMONDS FOUND IN EXTINCT VOLCANOES

Blast Twice a Day in the Premier Mine.

Schenectady, N. Y.—To any one acquainted with the mining of diamonds—those tiny bits of carbon which have played so absurdly large a part in the history of our civilization—the term "pipe" has a meaning of especial significance. The pipe to which any South African refers so casually is, or was, the vent of a volcano through which poured a stream of molten lava from the center of the earth. In the course of ages, as the volcano ceased to become active, this vent, or pipe, became filled up, and it is in this vestigial column, reaching for an immeasurable distance into the earth, that the precious crystals are found. It is to be presumed that the peculiar crystalline structure which differentiates a diamond from any piece of carbon was the result, in some way or other, of the previous volcanic action.

The first discovery of diamonds in South Africa was entirely accidental, and led immediately to a frantic rush of exploration, much like the gold and oil booms which the country has known. But after the first fever had died away, people learned that except within certain definitely ascertainable limits it was quite useless to look for diamonds at all. This area—the area within the pipe—was the only place in which diamonds might be found.

Pipe Oval in Shape. In the Premier mine, Transvaal, the pipe is oval in shape, and is roughly half a mile long and a quarter of a mile wide. This whole area of some 78 acres has been slowly dug away and thrown out upon the surrounding territory and combed with the most careful scrutiny as it has been removed.

The result has been a deep pit, the walls of which are the rock walls of the pipe, which has so far sunk to a depth of more than 600 feet. At present the mine is worked in terraces of 50-foot depth and it is estimated that this method of working can be employed for 30 more years. So far, it is estimated, more than 103,000,000 loads of earth have been removed, from which has been extracted 23,500,000 karats of diamonds.

It has been found that the working of the mine is much more profitable if it can be operated for 24 hours a day, continuously; and this brought in an especially direct method of illumination. At first an arc lighting system was introduced, but the constant blasting was so destructive to the lamps and wiring that it had to be abandoned.

Finally, with the help of the South African General Electric company, a method of lighting it by huge searchlights, mounted on the brim in batteries and abetting their beams down into the pit was evolved. Altogether there are 14 separate batteries of lights, mounted in luts at intervals along the edge. It is now possible to carry on the activities 24 hours a day, with no interruption, since provisions are made for every emergency.

Blasting Twice Daily. Blasting in the Premier mine takes place twice every day, at noon and at six o'clock, and is so accurately timed that a watch may be set by it. When the blast is about to be fired the swarms of black workmen may be seen rushing for the caves in which they stay during the process. Then, after the blasting is done, down they rush again and commence to fill the waiting cars with the material. The reason for their rushing lies in the fact that a bonus is offered for the number of cars they fill. Then the cars are dragged up the steep incline by a cable tramway.

The process of extracting diamonds is comparatively simple. It consists of drying and crushing the blue earth in which they are hidden and in removing the crystals by a further mechanical process. When found they look like nothing more exciting than rough pebbles; and it is not until they have been cut and polished with infinite care that the sparkling beauty for which they are known is made apparent. It was in the Premier mine that the Cullinan diamond, weighing over 3,000 karats, or one and one-third pounds, was found, and has since been cut up and made a part of the British crown jewels.

Take Body of First Wife on Honeymoon

Sydney.—When a pioneer settler of the Australian bush recently left for England on his second honeymoon, he simultaneously fulfilled a promise made to his first wife, who died several years ago.

The first wife, an English girl, became depressed by the silence and solitude of the bush, and once extracted from her husband a promise, that in event she died in Australia, he would have her body buried in England.

When she did die, the pioneer had her body sealed up in a leaden coffin and placed in an attic pending fulfillment of his obligation. The opportunity came only after he had remarried and his second wife suggested they go to England on their honeymoon. Along with the luggage in the hold of the ship, and labeled "Not required on voyage," was the coffin containing the body of the bridegroom's first wife.

TO TRY 'DESCANT' TO LIVEN HYMNS

English Method Will Be Introduced in United States.

New York.—When hymn singing becomes monotonous hereafter, application may be made for a remedy—Descant.

Descant, a style of choral singing, is said by one practitioner to be a cure for that "petering out" which may be observed in churches where singing has become perfunctory through sheer familiarity.

Congregations do their own singing under this prescription rather than leaving most of it to choirs. Walter Henry Hall, professor of church and choral music at Columbia university, has announced that his institution would develop Descant in America.

It is an innovation in this country and has lately been revived in England after centuries of disuse.

In England, as explained by Professor Hall, this part is carried by a picked group of soprano voices or by a boys' choir, the congregation, led by another choir, singing the air. The organist then is free to add any embellishment that will harmonize with the two, thus enriching the effect.

"Descant is adaptable to any church or group where a few good sopranos are available," he said. "No style in choral music yields such striking results for so little trouble."

"Descant lends new life to singing in churches, which in too many cases has become perfunctory and dead. It has come like a gust of fresh air, to awaken interest."

New Device Records Bump

Endurance of Aviators

Dayton, Ohio.—There are speedometers and pedometers and there is the accelerometer. But the accelerometer does not measure miles or steps. It records bounces and bumps. It is an intricate little device placed under the pilot's seat in an airplane and it tells how the flier's body stands the strain of being hurled around in their seat while the plane makes loops, spirals, nose dives and other forms of aerial gymnastics.

The device was perfected by Lieut. James H. Doolittle of McCook field, the engineering division of the army air service here. It contains a small strip of film on which is outlined the stress and strain of the body.

Lieutenant Doolittle has used a pilot-car without instruments and sharp movements of the plane, but comparatively slower dips and dives, continued for several seconds, causes the pilot to lose his faculties temporarily.

He has discovered that a flier, even in the pink of condition, can withstand the intense pressure resulting when a plane is turned around a pylon at high speed, only for a limited time. Twelve seconds is the limit.

When such turns are made, all the blood is forced down to the feet, and as high-speed airplanes are constantly being developed and bettered it was necessary to devise a means of finding out just how much a flier could endure.

Uncover Nevada Mines

Two Thousand Years Old

Los Angeles, Cal.—Several new discoveries throwing additional light on an ancient race have been made at Pueblo Grande de Nevada, the buried city of Nevada.

The archaeological finds were described here by Governor Scruggs, who has followed with interest the excavating work in his state. They include the remains of the works where these ancient people obtained their salt, ledges where they mined for ornaments, and remnants of clothing indicating familiarity with the use of cotton.

"The salt was gotten from a series of caverns a short distance from the buried city," Governor Scruggs said. "Some of the walls and floors of these caves are formed in part of pure rock salt and here the ancients conducted their salt mining. Their workings, showing where large blocks of salt were removed, are in the same condition of about 2,000 years ago."

"One of the relics was a pair of sandals of a type never before found in this country. They are in a good state of preservation and were made of deer hide and equipped with cotton cords for fastening."

Only traces of turquoise workings have been uncovered, as most of the work of excavators has been directed toward the salt mines.

Boy Takes Perilous Trip on Floating Ice

Trip on Floating Ice

Boston.—Arthur Lamson, eight, rode down the Charles river on a cake of ice, and while excited persons along the bank at Watertown shouted advice and encouragement, a piece of luck, of which the boy was quick to take advantage, brought the cruise to a safe end.

Arthur and several other children were playing on the ice when a section, about a dozen feet square, on which he was standing, broke off and drifted out into the current.

While everybody was calling to the boy and telling him what they would do in his place, a police ambulance drove along the bank, and firemen prepared to run out ropes and ladders.

Just then a slight cross-current whirled the ice cake around, and started it toward the shore. Arthur crouched on the edge of the cake and when a few feet separated it from the bank, jumped to safety.

MAN, MISSING 38 YEARS, IS BACK

Asks Share of Money Raised for Son's Family.

Atlanta, Ga.—One cold night, 38 years ago, J. A. Smith stepped from his house in College park, telling his wife he would return shortly with a load of fodder.

She never saw him again. But each night before she retired she opened the door and peered into the street, straining her eyes for sight of her husband and the load of fodder.

This was revealed in municipal court here, when Smith, now seventy-eight years old, suddenly returned and demanded a share of the money raised by public subscription for the family of his son, L. H. Smith, who was one of six firemen killed while fighting a cotton warehouse blaze.

Smith was identified by his sister, Mrs. Martha Ham. He also told the court the maiden name of his wife and the names of their six children. Judge L. F. McClelland was finally convinced and awarded the aged man \$322.85 of the subscription money, the balance going to a daughter.

When questioned by the court, Smith offered no reason for his extended absence, but said he had been living in Shelby county, Ala. His daughter said she had not seen him in 38 years, and at the hearing was not positive that the man was her father.

Beauty-Crazed Man Hides Girl Three Weeks

Camden, N. J.—In a cabin hidden in the woods on the outskirts of the city.

Detectives found seventeen-year-old Genevieve Vase, who has been missing from her home in Syracuse, N. Y., for three weeks. With her was Myron Faling, thirty-two, also of Syracuse, married and a father. The girl was taken back to Syracuse by her father, apparently overjoyed at her release. Faling was arrested.

The father attempted to attack Faling when the pair met in the Camden county jail, but was restrained by police.

"It was her beauty made me do it," said Faling when questioned by police. "I was crazy, I guess. I loved her; I was mad about her. I have guarded her and taken care of her, and have not harmed her. She will tell you I have always treated her with respect."

"I did not know Faling," Alvin Vase said, "except just to speak to. One day I saw him on the street. He had an automobile and asked me to take a ride. I got in and he would not let me out again. We drove and drove, and finally came to the cabin in the woods. He made me get out and said, 'If I dared to run away he would follow me and shoot me.'"

The couple was located through letters Faling wrote to his wife, all speaking in glowing terms of the beauty and sweetness of Genevieve.

Mrs. Faling turned the letters over to the authorities.

Deer Harm Orchards; Invade New York City

New York.—Up to the straggling edges of New York city have come roving bands of deer, from their hiding places in the state parks in Rockland and Westchester counties, until fruit growers and farmers are beginning to demand an open season.

"Most people wouldn't believe it," said Game Warden Townsend, "but there are deer of the white-tailed variety running wild in New York city."

In bands of as many as 20 they travel, mostly at night. They have been raiding young orchards, eating twigs and branches and gouging many small trees until their sap runs dry. The few men permitted to kill them have been unable to check their depredations.

Many farmers have watched the deer invade their lands and destroy trees, break down vines and garden framework, helpless in their ignorance of the possibility of obtaining permits to kill them.

Enough Oranges

Asbury Park, N. J.—James D'Espoulet, fruit merchant, is claimant of the national orange-eating championship, but he doesn't want to defend his title, if any. He ate two dozen oranges in 20 minutes in winning a bet from a news dealer.

Rats Wreck Castle and Now It's Theirs

Berlin.—Thousands of rats and mice, living unmolested in partial splendor for a score of years, have ruined the interior of the 155-year-old castle of Schwerinburg, near Ducherow, Mecklenburg.

Sold recently on the merits of its beautiful exterior, the castle, opened for the first time in 80 years by its new owner, was found to be a wreck. The rodents had gnawed into wood-work, costly antique furniture, paintings and tapestries, and played havoc with the beautiful glass chandeliers.

The purchaser, unable to spend \$250,000 for repairs, again locked the doors and left the rats in undisputed possession. The castle was built by Field Marshal Schwerin in the style of the famous Sans Souci palace at Potsdam.

New Congressional Directory

61st Congress, 2d Session SENATE DOCUMENT No. 664

A BIOGRAPHICAL CONGRESSIONAL DIRECTORY

WITH AN OUTLINE HISTORY OF THE NATIONAL CONGRESS

1774-1911

THE CONTINENTAL CONGRESS
SEPTEMBER 5, 1774-OCTOBER 21, 1789

THE UNITED STATES CONGRESS
FROM THE FIRST TO THE SIXTY-SECOND CONGRESS, MARCH 4, 1789-MARCH 3, 1911

Forthcoming Edition Will Correct Many Errors

By JOHN DICKINSON SHERMAN

10 libraries of the country are waiting impatiently for the publication of the forthcoming Congressional Directory. For the book is in great demand on the reference tables and there has not been an edition since that of 1911. Congress has made considerable history in the last 14 years, so the 1911 edition can hardly be called up to date. Moreover, there are many errors in the last edition and it is promised that these will be corrected.

This "Biographical Congressional Directory" should not be confused with the "Official Congressional Directory" which is published during each congress for the use of that congress and deals almost entirely with contemporaneous matters.

As appears by the title page of the 1911 edition of the larger work (herewith reproduced) it contains material which makes it a valuable reference book. It will be noted that the edition of 1911 was printed as Senate Document No. 664, second session of the Sixty-first congress. The title page bears the imprint of the Government Printing Office at Washington and the date of 1913. It may have been revised and corrected to the Sixty-second congress. Nevertheless, there are astonishing "breaks" in it, some of which are apparent to the most casual reader.

However, probably it was an improvement on previous volumes of the kind. There was no effort, so far as can be discovered, to keep any sort of a history of congress or a directory of its members before the year 1820. In that year the first publication approaching the dignity of a congressional directory appeared. It was compiled and edited by Daniel Rapine, Agent—whatever he may have been. It is a small volume of about forty pages and contains the names of the members of congress, with home and Washington addresses; the names and local addresses of the heads of the executive department; an incomplete list of American ministers abroad, and an alphabetical list of Washington boarding houses. This publication and others similar appeared from time to time during succeeding sessions of congress. They were private enterprises.

In 1865 congress took up the work of publishing a congressional directory. Biographical sketches first appeared in the directory of the third session of the Fortieth congress, in 1800. The joint committee on printing suggested that "it is desirable that no gentleman shall occupy over ten lines in print."

A permanent congressional directory, to comprehend all the congresses preceding, was first brought out by Charles Lannan in 1850 and the work bears the title, "Dictionary of the United States Congress."

There have been at least six editions, each intended to bring the material to date. The committee responsible for the 1911 edition of the "Biographical Congressional Directory" has this to say, among other things:

Since Mr. Lannan's latest volume the succeeding compilers appear to have done little more than to add to the permanent volume such information as could be obtained from the periodical Congressional Directories. There seems to have been little effort to correct, revise or perfect the work of the earlier compilers, and thus endless errors creep in.

The present committee has undertaken the work of general revision and verification. It has not only carefully scanned the journals and records of the senate but it has also consulted all the available biographical works; has made special appeals to government depositories; public libraries; historical associations; state, county and municipal officers, as well as to individuals, for specific and general information.

It is unfortunate that some records that might be of great value, especially as bearing upon earlier congressional election cases and their determination, were burned by the British in 1814.

The present joint committee on printing, in charge of the new edition, talks the same way—only more so. Senator George H. Moses of New Hampshire is chairman. The vice chairman is Representative Edgar R. Klees of Pennsylvania. The other members are Senator Arthur Capper of Kansas, Senator Duncan U. Fletcher of Florida, Representative Albert Johnson of Washington and Representative William F. Stevenson of South Carolina. Ansel Wold is clerk.

This joint committee has been working on the forthcoming edition since March of 1923 under a concurrent resolution. According to reports, the committee has been pretty thorough and among other things has written many thousands of letters in its search for information. It is known that some of the glaring errors have been detected and corrected.

Possibly the most astonishing error in the 1911 edition is concerning Cyrus L. Dunham. The biography of this Indiana member of the house reads:

Dunham, Cyrus L., a representative from Indiana; native of New York; self-educated; moved to Indiana and located in Salem; studied law and was admitted to the bar; member of the state house of representatives 1848-57; engaged in agriculture; elected as a Democrat to the 31st, 32nd and 33rd congresses (March 4, 1849-March 3, 1855); defeated as a candidate for the 34th congress; again elected a member of the state house of representatives; died in Valley Farm, Ind., October 15, 1856.

As a matter of fact Cyrus L. Dunham served through the Civil war as colonel of the Fifth Indiana Volunteers and died in Jeffersonville, Ind., November 22, 1877; he is buried in the Walnut Ridge cemetery in that

city. Note that the War department has had the Dunham record all these years.

Here's a curious sort of mistake, with an absurdly simple explanation: One day in setting the type of some one of the various "directories" a compositor picked up from the case a capital "D" instead of a capital "E." Thereupon the type read "Ed." Instead of "Ed." in consequence somewhat later Edward became Richard. So we find in the 1911 edition of the Directory the following biographies:

McGaughey, Edward Wilson a representative from Indiana; born in Greencastle, Ind.; January 16, 1817; attended the public schools; studied law, was admitted to the bar in 1835 and practiced; member of the state senate in 1848; elected as a Whig to the 31st congress (March 4, 1849-March 3, 1851); re-elected to the 32nd congress, March 4, 1849-March 3, 1851; unsuccessful candidate for re-election to the 33rd congress; died in San Francisco, Cal., August 6, 1852.

McGaughey, Richard W., a representative from Indiana; resident of Rockville, Ind.; elected to the 31st congress (March 4, 1849-March 3, 1851).

Yes; as you have already guessed, these two McGaugheys are one and the same man and his name was Edward Wilson McGaughey. A study of the house journal for the Thirty-first congress disclosed the mistake.

Page 464 of the 1911 edition is largely taken up with biographies of the Bayards of Delaware. Almost contiguous are biographies of "Bayard, James Asheton, Jr." and "Bayard, James Asheton 3d." They are one and the same man—who represented Delaware in the senate from 1851 to 1860, with the exception of a short time. The new edition, of course, will add another Bayard—the present senator, Thomas Francis Bayard.

The senatorial record of the Bayards is unique. The father of the present senator, Thomas Francis Bayard (1823-98); his grandfather, James Asheton Bayard 3d (1790-1860); his great uncle, Richard Henry Bayard (1795-1868); his great-grandfather, James Asheton Bayard 2d (1767-1815), and his great-great-grandfather, Richard Bassett (1745-1815), were all United States senators from Delaware.

Roger Sherman, delegate, representative and senator from Connecticut from the First Continental congress to his death in the Second United States congress, is set forth as having given unique service in that he helped prepare and signed all four of the great documents: Articles of Association, 1774; Declaration of Independence, 1776; Articles of Confederation, 1778; Constitution of the United States, 1787.

The word "antennae" did not officially come into the language until 1909, when it first appeared in a dictionary.

Size of Tigers

There is but one species of tiger, which ranges throughout southern and western Asia. Its length varies considerably, and is often overstated by reason of inaccurate measurement, but it may be said that few properly measured before removal of the skin, have exceeded nine and a half feet from nose to end of tail. The weight of a large one is about 600 pounds. Tigers are simply big cats, with cat

like ways of life. They are fond of water, but at night, when alone under ordinary conditions, they hunt for prey, and in so doing wander greatly, returning at dawn to chosen places of hiding during the daytime.

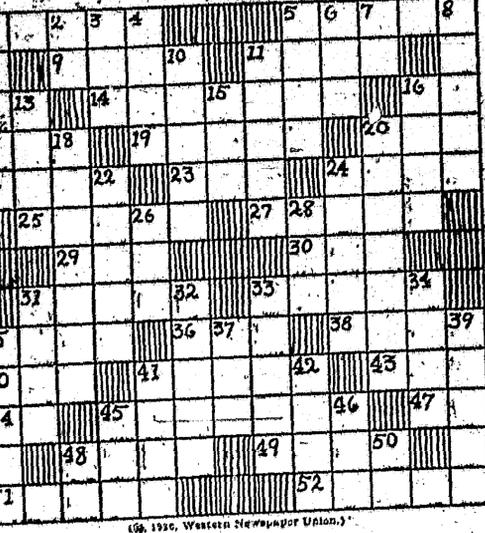

Various Kinds of Peat

Peat varies in consistency from a turf to a slime. As it decomposes its color deepens, old peat being dark brown or black, and keeping little of the plant texture. According to its formation it is known as bog peat

(mosses)—heath peat, meadow peat (grasses and sedges), forest peat or wood peat (trees) and sea peat (seaweeds). For use as a fuel, peat is dried and often compressed. It is widely found and increasingly important, but, owing to its bulk and its large content of water, and ash, does not compete favorably with coal.

The word "antennae" did not officially come into the language until 1909, when it first appeared in a dictionary.

Our Cross Word Puzzle

- Horizontal: 1—The edge, 2—To proceed, 3—Anger, 4—An act, 5—Part of 'to be', 6—Three-footed animal, 7—To climb a wall, 8—Inspector, 9—Melodious, 10—To mimic, 11—Piece of office furniture, 12—Frisped, 13—An abstraction, 14—Animal's name, 15—A gold treasure, 16—German (abbr.), 17—That woman, 18—Unpunished, 19—Volley of infantry fire, 20—City in Switzerland, 21—Public, 22—To make a pretense, 23—Girl's name, 24—Belongs, 25—Vandal, 26—Name as in horizontal, 27—Small capital, 28—Common formal announcement, 29—Note of scale. Vertical: 1—Stinger, 2—Scarlet.

LOCAL NEWS ITEMS

P. G. Peters spent the first part of the week in the county seat, returning Wednesday. J. A. Brubaker left Thursday for El Paso on business, to be gone a few days. Mr. and Mrs. Leon Tarlowe, of the Popular Store are visiting in Roswell this week. Easter passed over quietly, with beautiful weather following the fierce storm of the previous week. The annual meeting of the stockholders of the Farm Loan Association was held in Capitan, Tuesday. Attorney Hudapett of Carrizo passed through here Monday enroute to Roswell on legal business. Spring weather so far has been one storm after another, with the forecasters predicting others on the way. A light warm rain is falling here today. April showers bring forth sun flowers and other things relished by livestock. The Hodge Post of the American Legion held their bi-monthly meeting here Wednesday. Fort Stanton was well represented. "It never rains but it pours," is an old saying. Heavy rains are reported from the mountain districts and light showers all over the state. R. C. Stimmer passed through Capitan Monday on his way from his ranch on Nogal Mesa to Malaga, Eddy county, to his cotton plantation. Mrs. J. M. Rice, of Lincoln, passed through here this week en route to Fort Bayard on a visit to her daughter, Mrs. J. Weber and family. Heavy rains are reported to have fallen Tuesday night on the upper Hudson, Ariz. and other points in the south, leaving the country roads almost impassable. The rains and snows of past few weeks have been of incalculable value to this country, which has been more or less famine stricken during the past four years. John W. Stewart of Alton, passed through here Wednesday for Roswell. The rain of the previous night made the roads, in places, almost impassable, he said. Tom Burleson was up from Lincoln this forenoon, and informed us that Mrs. B. had that morning presented him with a lusty little boy. Mother and babe are getting along well. T. A. Spencer, manager of the Block Cattle Company, paid the Mountaineer office a welcome visit today. He stated that this rain (it was raining at the time) would pull many cattlemen out of a big hole—a four year hole.

R. H. Hinchey was up from Boca Canyon Tuesday. He said he expected to make a little money this year—the first in four years. Cattle are looking good, prices going up, and the outlook for farming was never better. There is a biblical saying that after seven lean years seven fat years shall follow. Stockmen and farmers who have been thru the drought for the past several years seem to think that the lean spell has been broken and that the fat years are coming. The latest accounts from the fruit-growing districts are to the effect that the apple crop will average 70 per cent in the county, but that stone fruit will be mighty scarce—hardly enough for the home table in some unprotected places. Small stockmen in the White Mountain district of the Lincoln Forest have organized a cattle association, with Fred Pflugsten of Lincoln as president. The organization starts with sixteen members, which it is expected will be doubled at next meeting. Marshal West was in from his mountain ranch yesterday. He stated that cattle generally are in poor condition at this season, and the late snow covered up the little feed left, which didn't help, but they will struggle for another month, when there will be new vegetation. Ben Pflugsten of the Nogal Mesa was a Capitan visitor Sunday. He stated he wrote his brother Charley, who is teaching a small school on the west side, to come and help on the farm, and, with good summer rains, he expects to lift the mortgage on his mother's farm this fall. Mr. and Mrs. L. L. Beard and family left last Saturday by auto for Dallas, Texas. They were accompanied by Mrs. J. W. Egan and little son, James Ken Egan, from which point Mrs. Egan will go to her former home in Houston, where she will visit for a month or so. Mr. Egan will leave for El Paso about the end of the month, and return with his wife and boy about the first of week in May. His mother will also accompany him on his return, and spend the summer here in the invigorating atmosphere of the mountains. Mr. Beard is expected to return about the first of the coming week. Pearl Pflugsten, 18, daughter of Mrs. Ed. Pflugsten of Nogal Mesa, was taken to an El Paso hospital last Saturday for an examination and probably an operation. When a child she received an injury to her head by a fall, and it is thought that the skull may be bearing on the brain at the point of injury. She is a Capitan high school student. J. W. Adams, the fruit tree agent, from the Rhodosa, was here this week taking orders for fruit trees. The late storm, which damaged fruit, had a discouraging effect on prospective buyers who were contemplating adding an orchard to their homesteads; yet, he stated, he was looking many orders. He left Wednesday for the lower valley. J. A. Phillips of the Tucson district, who had been failing health for the past two years, died at Hot Springs, Sierra county, on Saturday, March 27, from a complication of ailments. The remains were interred in the cemetery at that place. He leaves a widow and two sons and daughters, who reside on the ranch in the Tucson mountains. The deceased was about 55 years at the time of his death, and was well thought of by those who knew him. The snow fall here was the heaviest and the temperature the lowest, for the last week in March, that can be recalled in ten decades. The snow came in three installments—14 inches, two inches and seven inches, a total of 23 inches, followed by a freeze, the mercury dropping to the zero mark. Fort Stanton reported one below. The coldest during the winter was zero and two below. The snow would not have hurt the fruit buds if it had not been followed by a freeze, according to those living in the fruit belt.

IMPROVED UNIFORM INTERNATIONAL Sunday School Lesson Lesson for April 11. THE STORY OF CREATION. LESSON TEXT—Genesis 1:1-2:2. GOLDEN TEXT—In the beginning God created the heavens and the earth. PRIMARY TOPIC—God the Creator. JUNIOR TOPIC—The Story of Creation. INTERMEDIATE AND SENIOR TOPIC—God the Father of All Things. SENIOR PEOPLE AND ADULT TOPIC—God is Creation. Everything but God had a beginning. God the uncaused cause is the cause of all things. Let this fundamental truth, though beyond the power of the human mind to grasp, be believed and all our problems of philosophy and theology will be solved. R The Origin of the Universe (Gen. 1:1). It was created by God. All things came into being by the will and art of a personal God. Create means to bring into existence that which had no previous existence. II The Regeneration of the Earth (1:3-2:2). Between verses one and two is clearly marked an interval of perhaps wide duration. The earth which was created by God was subjected to a judgment. The Hebrew word "was" might just as well have been translated "became." Instead, therefore, of the earth having been created a void or chaos, we see that it became so through a cataclysmic judgment. In Isaiah 45:18, the prophet declares that God did not create the earth a waste, but that He formed it to be inhabited. All that real geology has to say to us harmonizes with this view. The so-called six days of creation exhibit God's rehabilitation of the earth. The cause for this judgment upon the earth is to be found doubtless in the judgment upon Satan, who is called the prince of this world (John 12:31). Observe that God created the species and decreed that they propagate after their kind. Such a thing as one species developing out of another is unknown to the Bible and real science. III The Origin of Man (2:2-2:25). He was created by God. He came into being through a special creative act of God. As to nature, he bore the image and likeness of God. This image and likeness is not physical or bodily, but intellectual and moral (Eph. 4:23, Col. 3:10). God's likeness is reflected in man's three-fold nature. Man is spirit, soul and body (1 Thess. 5:23). God made man with a personality capable of having fellowship with Himself—with whom He could share His glory. IV Adam Alone in Eden (2:7-2:17). He had a most beautiful place in which to live. God gave him surroundings in keeping with his nature. Pleasures to the sight and food for food" describes his surroundings. He was to "work and keep" the garden (v. 15), showing that work was God's primal thought for man. To this agrees the teaching of the New Testament. "If any man would not work, neither should he eat (1 Thess. 3:10). Man in Eden was deplete. Paradise Man in Eden could not satisfy with all its splendor could not satisfy the lonely heart. Animals of all kinds surrounded him, but no companionship among them was to be found for him. To make Adam conscious of his condition God caused the animals to pass before him with the result that no helpmeet was found for him; man, being a personality, was differentiated from the animal. V The Origin of Woman (2:21-24). To meet the need of man God made the woman: They had minds alike, therefore could commune together about the things that surrounded them; and about God. They had spiritual natures, therefore could commune together with God. God took a rib from Adam's side and out of it made the woman. Man was made from the dust of the ground and woman was taken from his side—thus woman was one removed farther from the earth than man. Someone has said that the man was dust refined, but the woman was dust doubly refined. Matthew Henry says, "Woman was made of the rib out of the side of Adam, not out of his head to rule him; nor out of his feet to be trampled upon by him; but out of his side, to be equal with him—neither his above to be protected and near his heart to be loved." VI The Origin of Marriage (2:23). God made man—male and female. It was His intention that men and women should marry. Marriage is the most sacred of human ties. It is of divine origin, for God Himself performed the marriage ceremony. Give Credit to God. This act of initiative and definite, this resolute step of entire confidence, is at the same time the most reasonable proceeding that a creature may undertake. Give credit to God; no wisdom, no prudent calculation could be safer.—Charles Wamser. Killing Doubts. Every step toward Our Lord Christ with a doubt. Every thought, word and deed for Him, carries you away from discouragement. The Fort Stanton Vote

At the Captain school election Tuesday the question of whether a person living at Fort Stanton for one year or more was a qualified voter, came up.

Once Down Is No Battle

The above heading holds good in baseball as well as in other sports.

Ex-Governor Lindsey Dies

Portales, N.M., April 5.—Former Governor W. E. Lindsey took his own life at his home in this town this morning.

Fruit Killed Only in Places

Things are seldom as bad as at first reported. The fruit below Lincoln was reported all killed, and lower down on the Hondo badly damaged.

The School Election

The school election held here Tuesday passed off quietly, little interest being taken in the result of the vote for school director.

For school director District 28

For consolidation 188 Against 2

For consolidation School District 28

For consolidation School District 28 with 28 resulted as follows:

For 170 Against 4

Elections were held on the same day in Districts 9, 10 and 29, to ascertain if these schools desired consolidation with Captain.

The Vote will be canvassed by the county school board later.

The vote will be canvassed by the county school board later, and the result will depend on the consolidation.

GENERAL DIPPING ORDERS AND QUARANTINE NOTICE

ISSUED BY THE CATTLE SANITARY BOARD OF NEW MEXICO.

Under authority conferred upon the Cattle Sanitary Board of New Mexico by Chapter 3, compiled laws of 1915, State of New Mexico, in consequence of the contagious disease known as Cattle Scabies being found on range inspection by the Cattle Sanitary Board and the Bureau of Animal Industry Inspectors co-operating dipping orders are hereby issued.

Notice is hereby given that Charles H. Hale, of Hondo, New Mexico, care Walter Counts, who on December 17, 1919, made Hd. Entry 028886, No. 044-661, for E2 and S2NW1/4, Section 35 Township 9-S., Range 18-E., N. M. P. Meridian, has filed notice of intention to make final three year Hd. Proof, to establish claim to the land above described, before Dan C. Savage, United States Commissioner, at Roswell, New Mexico, on May 8, 1926.

LIPPING REGULATION.

All dipping must be done in a recognized line and sulphur dip under the immediate and direct supervision of Inspectors of the Cattle Sanitary Board of New Mexico or the Federal Bureau of Animal Industry of the Department of Agriculture, and in accordance with the rules and regulations of the United States Department of Agriculture, and all animals to be held in the dip not less than two minutes.

THE CATTLE SANITARY BOARD OF NEW MEXICO

By M. G. Keenan, Secretary 3-25-26-4-9-26.

Glencoe Gleanings

It is rather too early to say or not all fruit will be killed by last week's storm. It often happens that we have good fruit crops from second or late bloom-

The world in general looks bright and hopeful on the Rio

The world in general looks bright and hopeful on the Rio Grande, especially since the storm. The green grass, plants, alfalfa, early gardens and leafing-trees makes the valley look truly beautiful.

The Glencoe school was ceremoniously closed Friday

The Glencoe school was ceremoniously closed Friday with a program by the children, sponsored by Miss Susan Tully, the teacher. Miss Tully's slogan, and that of the pupils, this year, has been "Quality, not Quantity," therefore we feel that the school year has been a very successful one.

The Rio Grande river, while not at the flood stage,

The Rio Grande river, while not at the flood stage, is running two feet deep, and furnishing abundance of water for the irrigated farms.

Hunt Hobbs Loses Father

Hunt Hobbs returned Monday from Brownwood, Texas, where he had gone two weeks previous on receipt of word that his father was seriously ill. He died soon after his arrival there and was buried last Thursday.

He leaves a widow, two sons

He leaves a widow, two sons, Hunt of this place, and Tom of Fort Stanton, and a married daughter, Mrs. Martin Moore of Gallup, who was present when the spirit of their father took flight to the Great Beyond; also three sons who reside in Texas.

In the Probate Court of Lincoln

In the Probate Court of Lincoln County, State of New Mexico. In the Matter of the Estate of Santos R. Lopez, Deceased, No. 200. NOTICE is hereby given that the undersigned was, on the third day of March, 1924, appointed Administrator of the Estate of Santos R. Lopez, deceased, by the Hon. W. E. Kimbrell, Judge of the Probate Court of Lincoln County, New Mexico.

Therefore, all persons having claim

Therefore, all persons having claim against said estate are hereby notified to file the same with the County Clerk of Lincoln County, within one year from the date of this notice, as provided by law, or the same will be barred. Done at Arabela, N. M., this 8th day of March, 1925. L. PACHECO, Administrator. 3-12 to 4-9

BUILDING materials, lumber

BUILDING materials, lumber, shingles, roofing, nails, doors, sash and builders' hardware heating stoves at Fisher Lumber Co.

PAINTS, Varnishes, Paint

PAINTS, Varnishes, Paint Brushes, Lime, Cement, Beaver Board, Heating Stoves, etc., at the Fisher Lumber Co.

New Mexico Lost to chussetts

Fitchburg, Mass., is the high school basketball champion of the United States, having won from Fargo, N.D., in the final of the intercollegiate championship last Saturday night.

After winning its first two games, Roswell has the distinction of being defeated by the team which downed all comers. The Roswell team also has the consolation of having had the famed Fitchburg quintet at the end of the first quarter by a score of 8-7, and were trailing Fitchburg at the end of the half by a score of only one point, the score at this stage being 11-3 in favor of the Yankees.

Roswell high produced a basketball team this year of which it should be proud.

Hunt Hobbs Loses Father

Hunt Hobbs returned Monday from Brownwood, Texas, where he had gone two weeks previous on receipt of word that his father was seriously ill. He died soon after his arrival there and was buried last Thursday.

The deceased will be remembered by many, as he had lived in Captain for a number of years before moving to Texas. He owned a ranch north of town, and was in the hotel business here for some time.

He leaves a widow, two sons

He leaves a widow, two sons, Hunt of this place, and Tom of Fort Stanton, and a married daughter, Mrs. Martin Moore of Gallup, who was present when the spirit of their father took flight to the Great Beyond; also three sons who reside in Texas.

SEEK RARE WILD ANIMALS FOR ZOO

Expedition Will Go to Jungles of Africa.

Washington.—Judging from the number of requests that have reached the Smithsonian institution for further information about the Smithsonian-Chrysler African expedition which will spend the spring and summer in the jungles of Tanganyika collecting wild live animals of rare species for the National Zoological park in Washington, the expedition has aroused greater popular interest than any similar Smithsonian undertaking since the famous Smithsonian-Roosevelt African expedition of 1900.

The two expeditions will go down in Smithsonian history as entirely distinct in purpose and doubtless in accomplishment. The Smithsonian-Roosevelt expedition brought back specimens in wild game for stuffing and mounting in the National museum, where today they are the most popular museum exhibit in the national capital. The venture which is now made possible through the generosity of Walter P. Chrysler will seek to capture and bring back live animals in greater variety and of rarer species than ever before attempted.

Dr. William M. Mann, director of the National Zoological park, which is under the direction of the Smithsonian institution, will lead the expedition. He hopes to capture animals which have never been seen alive in this country, and to install them at the National zoo.

The popular interest that is being shown in the Smithsonian-Chrysler expedition is scarcely surprising when it is recalled that more than 2,000,000 persons from all over the United States visited the National Zoological park last year. In this number were pupils from more than 200 schools, who came with their teachers to study natural history. These included not only Washington schools, but the higher grades of schools in many sections of the country which now make annual spring pilgrimages to Washington a part of their regular courses of instruction.

TALL MINE HOIST

The highest hoisting tower in the world, at the state mines of Mauritius, Holland. It is 55 meters high, or more than 165 feet.

Sell Love Letters of Victor Hugo for \$700

Paris.—One of the most remarkable collections of love letters on record—more than 15,000 of them—written by the former actress, Juliette Drouot, to Victor Hugo between 1833 and 1835, brought less than \$700 when put up at auction recently.

This actress, whom Hugo loved, retired from the stage and lived a life of seclusion for 20 years. Almost every day during that period she wrote the noted author a letter, as he had asked her to do, although they were seeing each other regularly as well, and this collection, an average of some 800 letters a year, was carefully preserved at the express wish of Hugo himself.

Victor Hugo spoke of these letters in one of his letters to Juliette, in which he said "our life is there, recorded day by day, thought by thought. Every dream of thine, every suffering, is there. Those letters are so many charming little mirrors, each one of which reflects a view of thy splendid soul."

Gustave Simon, who, as executor of Victor Hugo's will and personal friend of Juliette, ought to know, says that the letters will disappoint any one in search of a thrill, as they are nothing but a collection of empty phrases, "full of adulation and adoration, far from giving that reflection of the inner life of the lovers," that the sale catalogue promised.

Prunes!

Palm Beach, Fla.—When in a normal mood wear a blue-green shirt; when despondent a black one; when fatigued a blue one. Advises Van Rensselaer Pruyn, New York artist.

Bar Whiskers

Rome, Italy.—Cab drivers and taxi chauffeurs are forbidden to wear whiskers. An edict says whiskers are incompatible with the dignity of citizens.

DIAMONDS FOUND IN EXTINCT VOLCANOES

Blast Twice a Day in the Premier Mine.

Schenectady, N. Y.—To any one acquainted with the mining of diamonds—those tiny bits of carbon which have played so absurdly large a part in the history of our civilization—the term "pipe" has a meaning of especial significance. The pipe to which any South African refers so casually is, or was, the vent of a volcano through which poured a stream of molten lava from the center of the earth. In the course of ages, as the volcano ceased to become active, this vent, or pipe, became filled up, and it is in this vertical column, reaching for an immeasurable distance into the earth, that the precious crystals are found. It is to be presumed that the peculiar crystalline structure which differentiates a diamond from any piece of carbon was the result, in some way or other, of the previous volcanic action.

The first discovery of diamonds in South Africa was entirely accidental, and led immediately to a frantic rush of exploration, much like the gold and oil booms which the country has known. But after the first fever had died away, people learned that except within certain definitely ascertainable limits it was quite useless to look for diamonds at all. This area—the area within the pipe—was the only place in which diamonds might be found.

Pipe Oval in Shape. In the Premier mine, Transvaal, the pipe is oval in shape, and is roughly half a mile long and a quarter of a mile wide. This whole area of some 78 acres has been slowly dug away and thrown out upon the surrounding territory and combed with the most careful scrutiny as it has been removed.

The result has been a deep pit, the walls of which are the rock walls of the pipe, which has so far sunk to a depth of more than 500 feet. At present the mine is worked in terraces of 50-foot depth and it is estimated that this method of working can be employed for 50 more years. So far, it is estimated, more than 103,000,000 karats of earth have been removed, from which has been extracted 23,500,000 karats of diamonds.

It has been found that the working of the mine is much more profitable if it can be operated for 24 hours a day, continuously; and this brought in an especially difficult problem of illumination. At first an arc lighting system was introduced, but the constant blasting was so destructive to the lamps and wiring that it had to be abandoned.

Finally, with the help of the South African General Electric company, a method of lighting it by huge searchlights, mounted on the brim in batteries and shedding their beams down into the pit was evolved. Altogether there are 24 separate batteries of lights, mounted in huts at intervals along the edge. It is now possible to carry on the activities 24 hours a day, with no interruption, since provisions are made for every emergency.

Blasting Twice Daily. Blasting in the Premier mine takes place twice every day, at noon and at six o'clock, and is so accurately timed that a watch may be set by it. When the blast is about to be fired the swarms of black workmen may be seen rushing for the caves in which they stay during the process. Then, after the blasting is done, down they rush again and commence to fill the waiting cars with the material. The reason for their rushing lies in the fact that a bonus is offered for the number of cars they fill. Then the cars are dragged up the steep incline by a cable tramway.

The process of extracting diamonds is comparatively simple. It consists of drying and crushing the blue earth in which they are hidden and in removing the crystals by a further mechanical process. When found they look like nothing more exciting than rough pebbles; and it is not until they have been cut and polished with infinite care that the sparkling beauty for which they are known is made apparent. It was in the Premier mine that the Cullinan diamond, weighing over 3,000 karats, or one and one-third pounds, was found, and has since been cut up and made a part of the British crown jewels.

Take Body of First Wife on Honeymoon

Sydney.—When a pioneer settler of the Australian bush recently left for England on his second honeymoon, he simultaneously fulfilled a promise made to his first wife, who died several years ago.

The first wife, an English girl, became depressed by the silence and solitude of the bush, and once extracted from her husband a promise, that in event she died in Australia, he would have her body buried in England.

When she did die, the pioneer had her body sealed up in a leaden coffin and placed in an attic pending fulfillment of his obligation. The opportunity came only after he had remarried and his second wife suggested they go to England on their honeymoon. Along with the luggage in the hold of the ship, and labeled "Not required on voyage," was the coffin containing the body of the bridegroom's first wife.

TO TRY 'DESCANT' TO LIVEN HYMNS

English Method Will Be Introduced in United States.

New York.—When hymn singing becomes monotonous hymnalter, application may be made for a remedy—Descant.

Descant, a style of choral singing, is said by one practitioner to be a cure for that "petting out" which may be observed in churches where singing has become perfunctory through sheer familiarity.

Congregations do their own singing under this prescription rather than leaving most of it to choirs. Walter Henry Hall, professor of church and choral music at Columbia university, has announced that his institution would develop Descant in America.

It is an innovation in this country and has lately been revived in England after centuries of disuse. In England, as explained by Professor Hall, this part is carried by a picked group of soprano voices or by a boys' choir, the congregation, led by another choir, singing the air. The organist then is free to add any embellishment that will harmonize with the two, thus enriching the effect.

"Descant is adaptable to any church or group where a few good sopranos are available," he said. "No style in choral music yields such striking results for so little trouble."

"Descant lends new life to singing in churches, which in too many cases has become perfunctory and dead. It has come like a gust of fresh air, to awaken interest."

New Device Records Bump Endurance of Aviators

Dayton, Ohio.—There are speedometers and pedometers and there is the accelerometer. But the accelerometer does not measure miles or steps. It records bounces and bumps. It is an intricate little device placed under the pilot's seat in an airplane and it tells how the flier's body stands the strain of being hurled around in their seat while the plane makes loops, spirals, nose dives and other forms of aerial gymnastics.

The device was perfected by Lieut. James H. Doolittle of McCook field, the engineering division of the army air service here. It contains a small strip of film on which is outlined the stress and strain of the body.

Lieutenant Doolittle has found a pilot can withstand instantaneous and sharp movements of the plane, but comparatively slower dips and dives, continued for several seconds, causes the pilot to lose his faculties temporarily.

He has discovered that a flier, even in the pink of condition, can withstand the intense pressure resulting when a plane is turned around a pylon at high speed, only for a limited time. Twelve seconds is the limit.

When such turns are made, all the blood is forced down to the feet, and as high-speed airplanes are constantly being developed and bettered it was necessary to devise a means of finding out just how much a flier could endure.

Uncover Nevada Mines

Los Angeles, Cal.—Several new discoveries throwing additional light on an ancient race have been made at Pueblo Grande de Nevada, the buried city of Nevada.

The archeological finds were described here by Governor Scroggins, who has followed with interest the excavating work in his state. They include the remains of the works where these ancient people obtained their salt, ledges where they mined for ornaments, and remnants of clothing indicating familiarity with the use of cotton.

"The salt was gotten from a series of caverns a short distance from the buried city," Governor Scroggins said. "Some of the walls and floors of these caves are formed in part of pure rock salt and here the ancients conducted their salt mining. Their workings, showing where large blocks of salt were removed, are in the same condition of about 2,000 years ago."

"One of the relics was a pair of sandals of a type never before found in this country. They are in a good state of preservation and were made of deer hide and equipped with cotton cords for fastening."

Only traces of turquoise workings have been uncovered, as most of the work of excavators has been directed toward the salt mines.

Boy Takes Perilous Trip on Floating Ice

Boston.—Arthur Lamson, eight, rode down the Charles river on a cake of ice, and while excited persons along the bank at Watertown shouted advice and encouragement, a piece of luck, of which the boy was quick to take advantage, brought the cruise to a safe end.

Arthur and several other children were playing on the ice when a section, about a dozen feet square, on which he was standing, broke off and drifted out into the current.

While everybody was calling to the boy and telling him what they would do in his place, a police ambulance drove along the bank, and firemen prepared to run out ropes and ladders.

Just then a slight cross-current whirled the ice cake around, and started it toward the shore. Arthur crouched on the edge of the cake and when a few feet separated it from the bank, jumped to safety.

MAN, MISSING 38 YEARS, IS BACK

Asks Share of Money Raised for Son's Family.

Atlanta, Ga.—One cold night, 38 years ago, J. A. Smith stepped from his house in College park, telling his wife he would return shortly with a load of fodder.

She never saw him again. But each night before she retired she opened the door and peered into the street, straining her eyes for sight of her husband and the load of fodder.

This was revealed in municipal court here, when Smith, now seventy-eight years old, suddenly returned and demanded a share of the money raised by public subscription for the family of his son, L. H. Smith, who was one of six firemen killed while fighting a cotton warehouse blaze.

Smith was identified by his sister, Mrs. Martha Ham. He also told the court the maiden name of his wife and the names of their six children. Judge L. F. McCalland was finally convinced and awarded the aged man \$392.85 of the subscription money, the balance going to a daughter.

When questioned by the court, Smith offered no reason for his extended absence, but said he had been living in Shelby county, Ala. His daughter said she had not seen him in 38 years, and at the hearing was not positive that the man was her father.

Beauty-Crazed Man Hides Girl Three Weeks

Camden, N. J.—In a cabin hidden in the woods on the outskirts of the city, detectives found a seventeen-year-old Genevieve Vase, who has been missing from her home in Syracuse, N. Y., for three weeks. With her was Myron Felling, thirty-two, also of Syracuse, married and a father. The girl was taken back to Syracuse by her father, apparently overjoyed at her release. Felling was arrested.

The father attempted to attack Felling when the pair met in the Camden county jail, but was restrained by police.

"It was her beauty made me do it," said Felling when questioned by police. "I was crazy, I guess. I loved her; I was mad about her. I have guarded her and taken care of her, and have not harmed her. She will tell you I have always treated her with respect."

"I did not know Felling," Miss Vase said, "except just to speak to. One day I saw him on the street. He had a automobile and asked me to take a ride. I got in and he would not let me out again. We drove and drove, and finally came to the cabin in the woods. He made me get out and said, 'If I dared to run away, he would follow me and shoot me.'"

The couple was located through letters Felling wrote to his wife, all speaking in glowing terms of the beauty and sweetness of Genevieve. Mrs. Felling turned the letters over to the authorities.

Deer Harm Orchards; Invade New York City

New York.—Up to the straggling edges of New York city have come roving bands of deer, from their hiding places in the state parks in Rockland and Westchester counties, until fruit growers and farmers are beginning to demand an open season.

"Most people wouldn't believe it," said Game Warden Townsend, "but there are deer of the white-tailed variety running wild in New York city."

In bands of as many as 20 they travel, mostly at night. They have been raiding young orchards, eating twigs and branches and gouging many small trees until their sap runs dry. The few men permitted to kill them have been unable to check their depredations.

Many farmers have watched the deer invade their lands and destroy trees, break down vines and garden framework, helpless in their ignorance of the possibility of obtaining permits to kill them.

Enough Oranges

Asbury Park, N. J.—James D'Espoit, fruit merchant, is claimant of the national orange-eating championship, but he doesn't want to defend his title, if any. He ate two dozen oranges in 20 minutes in winning a bet from a news-dealer.

Rats Wreck Castle and Now It's Theirs

Berlin.—Thousands of rats and mice, living unmolested in palatial splendor for a score of years, have ruined the interior of the 150-year-old castle of Schwerinburg, near Ducherrow, Mecklenburg.

Sold recently on the merits of its beautiful exterior, the castle, opened for the first time in 30 years by its new owner, was found to be a wreck. The rodents had gnawed into wood-work, costly antique furniture, paintings and tapestries, and played havoc with the beautiful glass chandeliers.

The purchaser, unable to spend \$250,000 for repairs, again locked the doors and left the rats in undisputed possession. The castle was built by Field Marshal Schwerin in the style of the famous Sans Souci palace at Potsdam.

New Congressional Directory

SENATE DOCUMENT NO. 654

A BIOGRAPHICAL CONGRESSIONAL DIRECTORY

WITH AN OUTLINE HISTORY OF THE NATIONAL CONGRESS

1774-1911

THE CONTINENTAL CONGRESS
SEPTEMBER 5, 1774-OCTOBER 21, 1783

THE UNITED STATES CONGRESS.
FROM THE FIRST TO THE SIXTY-SECOND CONGRESS, MARCH 4, 1789-MARCH 3, 1911

Forthcoming Edition Will Correct Many Errors

By JOHN DICKINSON SHERMAN

10 libraries of the country are waiting impatiently for the publication of the forthcoming Congressional Directory. For the book is in great demand by the reference tables and, there has not been an edition since that of 1911. Congress has made considerable history in the last 14 years, so the 1911 edition can hardly be called up to date. Moreover, there are many errors in the last edition and it is promised that these will be corrected.

This "Biographical Congressional Directory" should not be confused with the "Official Congressional Directory" which is published during each congress for the use of that congress and deals almost entirely with contemporaneous matters.

As appears by the title page of the 1911 edition of the larger work (hereafter reproduced) it contains material which makes it a valuable reference book. It will be noted that the edition of 1911 was printed as Senate Document No. 654, second session of the Sixty-first congress. The title page bears the imprint of the Government Printing Office at Washington and the date of 1911. It may have been revised and corrected to the Sixty-second congress. Nevertheless, there are astonishing "breaks" in it, some of which are apparent to the most casual reader.

However, probably it was an improvement on previous volumes of the kind. There was no effort, so far as can be discovered, to keep any sort of a history of congress or a directory of its members before the year 1820. In that year the first publication approaching the dignity of a congressional directory appeared. It was compiled and edited by Daniel Rapine, Agent—whenever he may have been. It is a small volume of about forty pages and contains the names of the members of congress, with home and Washington addresses; the names and local addresses of the heads of the executive department; an incomplete list of American ministers abroad, and an alphabetical list of Washington boarding houses. This publication and others similar appeared from time to time during succeeding sessions of congress. They were private enterprises.

In 1865 congress took up the work of publishing a congressional directory. Biographical sketches first appeared in the directory of the third session of the Fortieth congress, in 1866. The joint committee on printing suggested that "it is desirable that no gentleman shall occupy over ten lines in print."

A permanent congressional directory, to comprehend all the congresses preceding, was first brought out by Charles Lammam in 1883, and this work bears the title, "Dictionary of the United States Congress." There have been at least six editions, each intended to bring the material to date. The committee responsible for the 1911 edition of the "Biographical Congressional Directory" has this to say, among other things:

Since Mr. Lammam's latest volume the succeeding compilers appear to have done little more than to add to the permanent volume such information as could be obtained from the periodical Congressional Directories. There seems to have been little effort to correct, revise or perfect the work of the earlier compilers, and thus endless errors creep in.

The present committee has undertaken the work of general revision and verification. It has not only carefully scanned the journals and records of debate, but it has also consulted all the available biographical works; has made special appeals to government depositories; public libraries; historical associations; state, county and municipal officers, as well as to individuals for specific and general information.

It is unfortunate that some records that might be of great value, especially as bearing upon earlier contested election cases and their determination, were burned by the British in 1814.

The present joint committee on printing, in charge of the new edition, talks the same way—only more so. Senator George H. Moses of New Hampshire is chairman. The vice chairman is Representative Edgar H. Kleas of Pennsylvania. The other members are Senator Arthur Capper of Kansas, Senator Duncan U. Fletcher of Florida, Representative Albert Johnson of Washington and Representative William F. Stevenson of South Carolina. Ansel Wold is clerk.

This joint committee has been working on the forthcoming edition since March of 1925 under a concurrent resolution. According to reports, the committee has been pretty thorough and among other things has written many thousands of letters in its search for information. It is known that some of the glaring errors have been detected and corrected.

Possibly the most astonishing error in the 1911 edition is concerning Cyrus L. Dunham. The biography of this Indiana member of the house reads:

"Dunham, Cyrus L., a representative from Indiana; native of New York; self-educated; moved to Indiana and located in Salem; studied law and was admitted to the bar; member of the state house of representatives 1847; engaged in agriculture; elected as a Democrat to the 21st, 22nd and 23rd congresses (March 4, 1849-March 3, 1855); defeated as a candidate for the 24th congress; again elected a member of the state house of representatives; died in Valley Farm, Ind., October 15, 1856."

As a matter of fact Cyrus L. Dunham served through the Civil war as colonel of the Fiftieth Indiana Volunteers and died in Jeffersonville, Ind., November 22, 1877; he is buried in the Walnut Ridge cemetery in that

city. Note that the War department has had the Dunham record all these years.

Here's a curious sort of mistake, with an absurdly simple explanation: One day in setting the type of some one of the various "directories" a compositor picked up from the case a capital "R" instead of a capital "E." Thereupon the type read "Ed." Instead of "Ed." In consequence somewhat later Edward became Richard. So we find in the 1911 edition of the Directory the following biographies:

McGaughey, Edward Wilson a representative from Indiana; born in Greencastle, Ind., January 16, 1817; attended the public schools; studied law, was admitted to the bar in 1835 and practiced; member of the state senate in 1842; elected as a Whig to the 21st congress (March 4, 1849-March 3, 1851); re-elected to the 22nd congress, March 4, 1849-March 3, 1851; unsuccessful candidate for re-election to the 23rd congress; died in San Francisco, Cal., August 6, 1852.

Yes; as you have already guessed, these two McGaugheys are one and the same man and his name was Edward Wilson McGaughey. A study of the house journal for the Thirty-first congress disclosed the mistake.

Page 464 of the 1911 edition is largely taken up with biographies of the Bayards of Delaware. Almost contiguous are biographies of "Bayard, James Asheton, Jr." and "Bayard, James Asheton 3d." They are one and the same man—who represented Delaware in the senate from 1831 to 1860, with the exception of a short time. The new edition, of course, will add another Bayard—the present senator, Thomas Francis Bayard. The senatorial record of the Bayards is unique. The father of the present senator, Thomas Francis Bayard (1828-93); his grandfather, James Asheton Bayard 3d (1700-1800); his great uncle, Richard Henry Bayard (1706-1808); his great-grandfather, James Asheton Bayard 2d (1707-1816), and his great-great-grandfather, Richard Bassett (1745-1815), were all United States senators from Delaware.

Roger Sherman, delegate, representative and senator from Connecticut from the First Continental congress to his death in the Second United States congress, is set forth as having given unique service in that he helped prepare and signed all four of the great documents: Articles of Association, 1774; Declaration of Independence, 1776; Articles of Confederation, 1778; Constitution of the United States, 1787.

like ways of life. They are fond of water, but at night, when alone under ordinary conditions, they hunt for prey, and in so doing wander greatly, returning at dawn to chosen places of hiding during the daytime.

Various Kinds of Peat. Peat varies in consistency from a turf to a slime. As it decomposes its color deepens, old peat being dark brown or black, and keeping little of the plant texture. According to its formation it is known as bog peat

(mosses), heath peat, meadow peat (grasses and sedges), and sea peat (wood peat (trees) and sea peat (seaweeds). For use as a fuel, peat is dried and often compressed. It is widely found and increasingly important, but, owing to its bulk and its large content of water and ash, does not compete favorably with coal.

The word "lantern-slide" did not officially come into the language until 1800, when it first appeared in a dictionary.

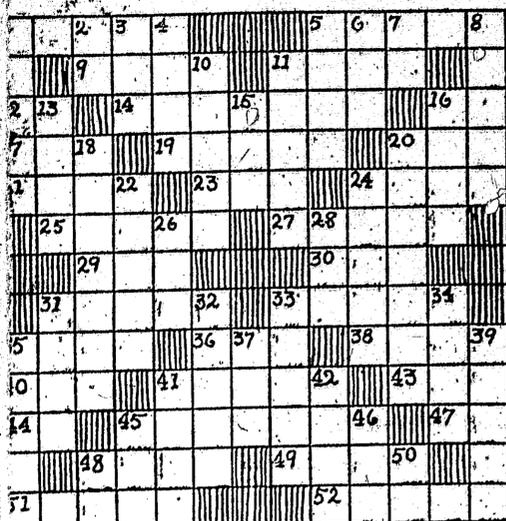

Size of Tigers

There is but one species of tiger, which ranges throughout southern and western Asia. Its length varies considerably, and is often overrated by reason of inaccurate measurement, but it may be said that few properly measured before removal of the skin, have exceeded nine and a half feet from nose to end of tail. The weight of a large one is about 600 pounds. Tigers are slinky big cats, with cat-

like ways of life. They are fond of water, but at night, when alone under ordinary conditions, they hunt for prey, and in so doing wander greatly, returning at dawn to chosen places of hiding during the daytime.

LOCAL NEWS ITEMS

P. G. Peters spent the first part of the week in the county seat, returning Wednesday.

J. A. Brubaker left Thursday for El Paso business, to be gone a few days.

Mr. and Mrs. Leon Tarlowe, of the Popular Store are visiting in Roswell this week.

Easter passed over quietly, with beautiful weather following the fierce storm of the previous week.

The annual meeting of the stockholders of the Farm Loan Association was held in Capitan, Tuesday.

Attorney Hudspeth of Carrizozo passed through here Monday enroute to Roswell on legal business.

Spring weather so far has been one storm after another, with the forecasters predicting others on the way.

A light warm rain is falling here today, April showers bring forth sun showers—and other things relished by livestock.

The Hago Post of the American Legion held their bi-monthly meeting here Wednesday. Fort Stanton was well represented.

"It never rains but it pours," is an old saying. Heavy rains are reported from the mountain districts and light showers fall over the state.

R. C. Skinner passed through Capitan Monday on his way from his ranch on Nogal Mesa to Mungo, Eddy county, to his cotton plantation.

Mrs. J. M. Rice, of Lincoln, passed through here this week enroute to Fort Bayard on a visit to her daughter, Mrs. J. Weber and family.

Heavy rains are reported to have fallen Tuesday night on the upper Rio Grande, Alto, and other points in the south, leaving the country roads almost impassable.

The rains and snows of past few weeks have been of inestimable value to this county, which has been more or less famine-stricken during the past four years.

John W. Stewart of Alto, passed through here Wednesday for Roswell. The rain of the previous night made the roads, in places, almost impassable, he said.

Tom Burleson was up from Lincoln this forenoon and informed us that Mrs. D. had that morning presented him with a lusty little boy. Mother and babe are getting along well.

T. A. Spencer, manager of the Block Cattle Company, paid the Mountaineer office a welcome visit today. He stated that this rain (it was raining at the time) would pull many cattlemen out of a big hole—a four year hole.

K. H. Hinchey was up from Baca Canyon Tuesday. He said he expected to make a little money this year—the first in four years. Cattle are looking good, prices going up, and the outlook for farming was never better.

There is a Biblical saying that after seven lean years seven fat years shall follow. Stockmen and farmers who have been thru the drought for the past several years seem to think that the lean spell has been broken and that the fat years are coming.

The latest accounts from the fruit-growing districts are to the effect that the apple crop will average 70 per cent in the county, but that stone fruit will be mighty scarce—hardly enough for the home table in some unprotected places.

Small stockmen in the White Mountain district of the Lincoln Forest have organized a cattle association, with Fred Pfingsten of Lincoln as president. The organization starts with sixteen members; which it is expected will be doubled at next meeting.

Marshal West was in from his mountain ranch yesterday. He stated that cattle naturally are in poor condition at this season, and the late snow covered up the little feed left, which didn't help, but they will through for another month when there will be new vegetation.

Ben Pfingsten of the Nogal Mesa was a Capitan visitor Sunday. He stated he wrote his brother Charley, who is teaching a small school on the west side, to come and help on the farm, and, with good summer rains, he expects to lift the mortgage on his mother's farm this fall.

Mr. and Mrs. L. L. Beagel and family left last Saturday by auto for Dallas, Texas. They were accompanied by Mrs. J. W. Ezell and little son, James Kenneth, from which point Mrs. Ezell will go to her former home in Houston, where she will visit for a month or so. Mr. Ezell will leave for Houston about the end of the month and return with his wife and boy about the first week in May. His mother will also accompany him on his return, and spend the summer here in the invigorating atmosphere of the mountains. Mr. Beagel is expected to return about the first of the coming week.

Pearl Pfingsten, 18, daughter of Mrs. Ed. Pfingsten of Nogal Mesa, was taken to an El Paso hospital last Saturday for an examination and probably an operation. When a child she received an injury to her head by a fall, and it is thought that the skull may be bearing on the brain at the point of injury. She is a Capitan high school student.

L. W. Adams, the fruit tree agent, from the Rio Grande, was here this week taking orders for fruit trees. The late storm, which damaged fruit, had a discouraging effect on prospective buyers who were contemplating adding an orchard to their homesteads; yet, he stated, he was booking many orders. He left Wednesday for the lower valley.

J. A. Phillips of the Tucson district, who had been in failing health for the past two years, died at Hot Springs, Sierra county, on Saturday, March 27, from a complication of ailments. The remains were interred in the cemetery at that place. He leaves a widow and two sons and daughters, who reside on the ranch in the Tucson mountains. The deceased was about 55 years of age at the time of his death, and was well thought of by those who knew him.

The snow fall here was the heaviest and the temperature the lowest, for the last week in March, that can be recalled in ten decades. The snow came in three installments—14 inches, two inches and seven inches, a total of 23 inches, followed by a freeze, the mercury dropping to the zero mark. Fort Stanton reported one below. The coldest during the winter was zero and two below. The snow would not have hurt the fruit buds if it had not been followed by a freeze, according to those living in the fruit belt.

Sunday School Lesson

Lesson for April 11.

THE STORY OF CREATION

LESSON TEXT—Genesis 1:1-2:25

GOLDEN TEXT—In the beginning God created the heavens and the earth.

Gen. 1:1

PRIMARY TOPIC—God the Creator of All Things.

JUNIOR TOPIC—The Story of Creation.

INTERMEDIATE AND SENIOR TOPIC—God the Maker of All Things.

YOUNG PEOPLE AND ADULT TOPIC—God in Creation.

Everything but God had a beginning. God the uncaused cause is the cause of all things. Let this fundamental truth, though beyond the power of the human mind to grasp, be believed and all our problems of philosophy and theology will be solved.

R The Origin of the Universe (Gen. 1:1).

It was created by God. All things came into being by the will and act of a personal God. Create means to bring into existence that which had no previous existence.

11 The Regeneration of the Earth (2:1-25).

Between verses one and two is clearly marked an interval of perhaps wide duration. The earth which was created by God was subjected to a judgment. The Hebrew word "was" might just as well have been translated "became." Instead, therefore, of the earth having been created a void or chaos, we see that it became so through a calamitous judgment. In Isaiah 45:18, the prophet declares that God did not create the earth a waste, but that He formed it to be inhabited. All that real geology has to say to us harmonizes with this view. The so-called six days of creation exhibit God's rehabilitation of the earth.

The cause for this judgment upon the earth is to be found doubtless in the judgment upon Satan, who is called the prince of this world (John 12:31).

Observe that God created the species and decreed that they propagate after their kind. Such a thing as one species developing out of another is unknown to the Bible and real science.

111. The Origin of Man (2:20-25):

He was created by God. He came into being through a special creative act of God. As to nature, he bore the image and likeness of God. This image and likeness is not physical or bodily, but intellectual and moral (Col. 3:10, Col. 3:10). God's likeness is reflected in man's three-fold nature. Man is spirit, soul and body (1 Thess. 5:23). God made man with a personality capable of having fellowship with Himself—with whom He could share His glory.

1V. Adam Alone in Eden (2:7-9) 15:20).

He had a most beautiful place in which to live. God gave him surroundings in keeping with his nature: "Pleasant to the sight and good for food" describes his surroundings. He was to "dress and keep" the garden (v. 15), showing that work was God's primal thought for man. To this agrees the teaching of the New Testament. If any man would not work, neither should he eat (11 Thess. 3:10). Man in Eden was idleness. Paradise with all its splendor could not satisfy his lonely heart. Animals of all kinds surrounded him, but no companionship among them was to be found for him. To make Adam conscious of his condition God caused the animals to pass before him with the result that no helpness was found for him; man, being a personality, was differentiated from the animal.

V. The Origin of Woman (2:21-24). To meet the need of man God made the woman. They had minds alike, therefore could commune together about the things that surrounded them; and about God. They had spiritual natures, therefore could commune together and with God. God took a rib from Adam's side and out of it made the woman. Man was made from the dust of the ground and woman was taken from his side—thus woman was one removed farther from the earth than man. Someone has said that the man was dust refined, but the woman was dust doubly refined. Matthew Henry says, "Woman was made of the rib out of the side of Adam, not out of his head to top him, nor out of his feet to be trampled upon by him, but out of his side, to be equal with him—under his arm, to be protected and near his heart to be loved."

VI. The Origin of Marriage (2:24). God made man—male and female. It was His intention that men and women should marry. Marriage is the most sacred of human ties. It is of divine origin; for God Himself performed the marriage ceremony.

Give Credit to God

This act of initiative and definite, this resolute step of entire confidence, is at the same time the most reasonable proceeding that a creature may undertake. Give credit to God; no wisdom, no prudent calculation could be safer.—Charles Wagner.

Killing Doubts

Every step toward Our Lord Christ kills a doubt. Every thought, word, and deed for Him, carries you away from discouragement.

The Fort Stanton Vote

At the Captain school election Tuesday the question of whether a person living at Fort Stanton for one year or more was a qualified voter, came up.

County Superintendent Fritzsche should procure a copy of the law and furnish the school board, also Fort Stanton, with a duplicate copy.

Once Down Is No Battle The above heading holds good in baseball as well as in more strenuous contests.

The above heading holds good in baseball as well as in more strenuous contests. Some two weeks ago the Fort Stanton baseball team went to Roswell and played second fiddle to the Institute team of that city.

Since then, however, both teams did some practicing, and have again become familiar with the willow and spher.

Last Monday a rubber game was played on the Fort Stanton diamond. Both teams played a good game, well contested from start to finish, which resulted in a score of 5 to 3 in favor of the Stanton team.

There is little reason to doubt that when warmed up after a few games, with a notch or two taken in their belts, they will make a record as good, at least, as they made in 1925.

Ex-Governor Lindsey Dies By Gun Shot

Portales, N.M., April 5—Former Governor W. E. Lindsey took his own life at his home in this town this morning.

After getting his mail at the postoffice this morning he went to his office where he spent a few minutes. Returning to his home he went to his room, and laying down on a sofa sent a bullet from an automatic revolver into his heart.

Fruit Killed Only in Places By the Late Storm

Things are seldom as bad as at first reported. The fruit below Lincoln was reported all killed, and lower down on the Hondo badly damaged.

As the year is yet young, it is said, that the damaged trees may develop new buds, in which case, if nothing further happens, there may be 80 per cent apple drop, with some pears, peaches and plums, as L. W. Adams of the Doso stated, "there will be fruit to eat and to sell."

Santa Fe Buys New Mexico Central

The New Mexico Central rail road, operating between Santa Fe and Torrance, has been sold to the A. T. & S. F. Satisfactory arrangements have been made for the transportation of the Navajo reservation oil from Gallup to market.

The School Election

The school election held here Tuesday passed off quietly, little interest being taken in the result of the vote for school director, but considerable interest was manifested in the question of consolidation, as, if carried, it would mean more pupils, more teachers, and consequently, a larger appropriation for maintenance.

For school director District 28 (Captain), there were two candidates, H. F. Dockray, Captain, and W. A. Wunsch, Fort Stanton, H. F. Dockray 111, W. A. Wunsch 83.

The question of consolidating School Districts 1 and 28 (Mean) with 28 (Captain), was voted on as follows: For consolidation 188, Against 2.

For consolidating School District 28 with 28 resulted as follows: For 170, Against 4.

Elections were held on the same day in Districts 9, 28 and 29, to ascertain if these schools desired consolidation with Captain. If they did not, they could not be compelled.

In District 28 (Dosen) 30 votes were cast for and 3 against. In Districts 9 and 29 we failed to get the figures, further than there was a majority for consolidation.

The vote will be canvassed by the county school board later, and on the result will depend the consolidation. District 28 resulting in a tie vote, remains where it is.

GENERAL DIPPING ORDERS AND QUARANTINE NOTICE ISSUED BY THE CATTLE SANITARY BOARD OF NEW MEXICO

Under authority conferred upon the Cattle Sanitary Board of New Mexico by Chapter 3, compiled laws of 1915, State of New Mexico, in consequence of the contagious disease known as Cattle Scabies being found on range inspection by the Cattle Sanitary Board and the Bureau of Animal Industry Inspectors co-operating dipping orders are hereby issued, and the following described area declared a quarantine district: Beginning at Corona, New Mexico, thence running south along the Southern Pacific Railroad to Teoloto Station; thence South and East along the old Captain and Corona Road to the point where this road crosses the Robertson Canyon on the Honard ranch; thence South along the West fence of the Etchevery and Walker pasture to the Southwest corner of the Etchevery and Walker pasture; thence East and South along the south fence of the Etchevery and Walker pasture to the intersection of the Captain-Block Ranch road and this fence; thence South to the crest of the Captain Mountains; thence East along the crest of the Captain Mountains and to the Southeast corner of the G. R. Brill pasture; thence North and East along the East fences of the C. R. Brill, Louis Purrella, Louisena & Co., and the G. R. Billings pastures to the Northeast corner of the G. F. Billings pasture; thence West and North along the North boundary fence of the G. F. Billings, Phil Blanchard, and L. Hancock pastures to the northwest corner of the L. Hancock pasture; thence West to the north rim of the Gallo Canyon; thence West along the north rim of the Gallo Canyon to Corona, New Mexico, thence point and place of beginning.

Now, therefore, all persons, firms or corporations owning or having control of any neat cattle within the above described infected cattle scabies district are hereby ordered to dip twice and not less than ten more than fourteen days apart all of said cattle which may be owned or which are under their direction or control on or before the fortieth (40th) day after the 9th day of April 1926.

It is further specifically directed that during the quarantine of the infected district that it shall be unlawful for any cattle belonging to or under control of any person, firm or corporation within said infected district to be moved therefrom except for the purpose of being dipped, and then only by the written permission of the properly authorized agent of the Cattle Sanitary Board or the Federal Bureau of Animal Industry.

Provided, further, however, that cattle which have been properly dipped and certified to by an Inspector of the Cattle Sanitary Board or the Federal Bureau of Animal Industry, shall be entitled to free and unrestricted movement therefrom.

DIPPING REGULATION

All dipping must be done in a recognized lime and sulphur dip under the immediate and direct supervision of Inspectors of the Cattle Sanitary Board of New Mexico or the Federal Bureau of Animal Industry of the Department of Agriculture, and in accordance with the rules and regulations of the United States Department of Agriculture, and all animals to be held in the dip not less than two minutes.

The Cattle Scabies disease is a very serious menace to the cattle industry of New Mexico, and its control and suppression imperative. This can only be accomplished successfully by complete and thoroughly dipping of all cattle in the infected areas.

The Cattle Sanitary Board of New Mexico is deeply interested in having the disease eradicated and infected areas released from the quarantine as soon as possible, and to this end wishes to co-operate with all cattlemen and render all assistance within its power.

THE CATTLE SANITARY BOARD OF NEW MEXICO

By M. G. Keenan, Secretary 3-26-26-4-23-26.

NOTICE FOR PUBLICATION

Department of the Interior U. S. Land Office Las Cruces, N. Mex. March 15, 1926. Notice is hereby given that Juanita Sanchez, of San Patricio, N. M., who, on March 10, Nov. 6, 1923, made Original and Additional SR Homestead entries No. 028201-028564 for S4, SE1/4, S1/2, NE1/4, NE1/2 Sec 16; N1/2, S1/2, S1/4, E1/2, E1/4 Section 18, Township 10 S., Range 16 E., N. Glencoe Gleanings

It is rather too early to say or not all fruit will be killed by last week's storm. It often happens that we have good fruit crops from second or late budding. Apples, especially, are almost sure to bear, although lightly, from second budding. Our pear and peach crops on the Ruidoso, generally conceded to be the best favored in the state, are nearly always sure crops; so we are not in the least discouraged about our fruit crop as yet.

The world in general looks bright and hopeful on the Ruidoso, especially since the storm. The green grass, plants, alfalfa, early gardens and leafing trees makes the valley look truly beautiful.

The Glencoe school was ceremoniously closed Friday with a program by the children, sponsored by Miss Susan Tully, the teacher. Miss Tully's slogan, and that of the pupils, this year, has been 'Quality, not Quantity,' therefore we feel that the school year has been a very successful one.

The Ruidoso river, while not at the flood stage, is running two feet deep, and furnishing abundance of water for the irrigated farms.

Hunt Hobbs Loses Father Hunt Hobbs returned Monday from Brownwood, Texas, where he had gone two weeks, previous to receipt of word that his father was seriously ill. He died soon after his arrival there and was buried last Thursday.

The deceased will be remembered by many, as he had lived in Captain for a number of years before moving to Texas. He owned a ranch north of town, and was in the hotel business here for some time. He leaves a widow, two sons, Hunt of this place, and Tom of Fort Stanton, and a married daughter, Mrs. Martin Moore of Gallup, who were present when the spirit of their father took its flight to the Great Beyond; also three sons who reside in Texas.

Young vigor to old folks

"Flow years of poor health followed by influenza and pleurisy left me weak to the point that I thought my time had come. My niece recommended Tanlac. It added years to my life! My young and vigorous again."
Mrs. Sarah A. Voss, 637 1/2 St. N., Willamette, Ore.

One of Tanlac's greatest blessings is the new life and vigor it brings to old folks. Every day men and women up to the seventies and eighties thank us for Tanlac's wondrous benefits.

Tanlac is a natural tonic, made from roots, barks and rare herbs. Harmless to man or child. It cleans the blood, stirs up the liver and puts digestive organs in working order.

If your body is weak and run-down, if you lack ambition, can't eat or sleep, you'll be delighted with Tanlac's results. Take Tanlac Vegetable Pills for constipation.

WONDERFUL DISCOVERY—Grass for All! Land is a investigation says new grass will thrive on the worst either hay or pasture. John Zawadzki, Marion, Montana.

Tragedy
For ten years they lived happily and the future was rosy. Then they learned to play bridge. She has resumed her maiden name. 1466

Your own physician will confirm this doctor's statement.

The real cause of bad breath

"You cannot 'cover up' unpleasant breath for any length of time. The only way to rid yourself permanently of it is by removing the cause."
"Sometimes poor teeth are responsible. But the commonest cause of a coated tongue and offensive breath is constipation. You may not realize that your intestines are slow in eliminating waste matter, or that your breath is objectionable. But others will notice it."
"Get rid of constipation, and your breath will become fresh and sweet. Even more important, you will notice an immediate improvement in your health and spirits."

Nujol relieves constipation in Nature's own way

Constipation is dangerous for any body. Nujol is safe for everybody. It does not affect the stomach and is not absorbed by the body. Medical authorities approve Nujol because it is so safe, so gentle, and so natural in its action.
Nujol simply makes up for a deficiency—temporary or chronic—in the supply of natural lubricant in the intestines. It softens the waste matter and thus permits thorough and regular elimination without overtaxing the intestinal muscles. Nujol can be taken for any length of time without ill effects. To insure internal cleanliness, it should be taken regularly in accordance with the directions on each bottle. Unlike laxatives, it does not form a habit and can be discontinued at any time. Ask your druggist for Nujol today. Removes the cause of bad breath and begins to enjoy the perfect health that is possible only when elimination is normal and regular.

Nujol THE INTERNAL LUBRICANT For Constipation

COLOR IT NEW WITH "DIAMOND DYES"

Just Dip to Tint or Boil to Dye.
Each 15-cent package contains directions so simple any woman can tint soft, delicate shades or dye rich, permanent colors in lingerie, silks, ribbons, skirts, waists, dresses, coats, stockings, sweaters, draperies, coverings, hangings—everything!

Buy Diamond Dyes—no other kind—and tell your druggist whether the material you wish to color is wool or silk, or whether it is linen, cotton or mixed goods.

Was Tiniest Baby
Gilbert O. McGilvray of Villa Wain, Wash., who died recently at the age of seventy-two was, when he was born at Trempealeau, Wis., in 1833, the tiniest baby on record who lived. There were no baby incubators in those days and his survival occasioned widespread interest.

Sure Relief
Buy Diamond Dyes—no other kind—and tell your druggist whether the material you wish to color is wool or silk, or whether it is linen, cotton or mixed goods.

BELLANS FOR INDIGESTION

PREVENT DISEASES OF PREGNANT EWES

In late winter and early spring, unless special precautions are taken, a form of self-poisoning or auto-intoxication may prove fatal. This disease has for years puzzled all students of the subject, but a method of prevention has been devised. The symptoms shown by affected ewes are these: The animal lags, lies down a great deal, loses appetite, grinds its teeth, staggers, may toss its head backward, is constipated and soon goes down. It is unable to rise and soon dies.

When opened after death, the gall bladder is usually found greatly distended, and the liver is pale in color and so friable and easily broken that it is termed "rotten" by the shepherd. Often there seems to be but little blood in the body. It may be added that sometimes the tissues of the body are stained a yellowish color, indicating jaundice.

Almost invariably the train of conditions and circumstances leading up to the attack are close confinement and lack of exercise, and prolonged, excessive feeding of coarse, dry, bulky conspurating roughage, especially timothy hay, weathered corn stover and straw or withered, frozen grass. The ewes may also have been fed corn and sometimes are fat and often sluggish.

There can be little question, I think, that resorption of poisons, generated in the digestive tract, is the direct cause of the ailment, the liver having been overtaxed and made unable perfectly to perform its functions, one of which is the elimination or destruction of the poisons mentioned.

No medicinal remedy has been found, but the disease may be prevented by making pregnant ewes take active exercise daily, keeping their bowels and kidneys active and avoiding the weakening effects of close housing in a hot, dirty, badly-ventilated stable. To that end make the ewes walk several miles daily to get clover or alfalfa hay scattered over a distant field, feed each ewe two pounds of roots daily, avoid feeding the conspurating roughages mentioned, feed oats and bran to weak ewes and, for all sheep, provide airy, sanitary stables.—A. S. A., of Wisconsin in Successful Farming.

Dangerous to Let Hogs Sleep in Straw Stacks

The practice that some farmers follow of permitting their hogs to find shelter in straw stacks during cold weather is a very dangerous one for the reason that on cold nights hogs are inclined to burrow deep into these stacks, or perhaps to pile up closely together—and then when morning comes and when they crawl out of their nests they are frequently so warm from perspiration that they steam as they walk out into the cold air. Such a condition can very easily produce pneumonia and is therefore a very risky policy. The wiser course is to provide sheds of one kind or another that are dry under foot and so well ventilated that the animals can not become excessively warm.

Fixing Value of Clover and Alfalfa for Steers

There have been some feeding trials with beef steers to determine the value of clover as compared to alfalfa. When steers were fed in Indiana on alfalfa, corn, and cottonseed meal, clover hay was found to be fully equal to alfalfa hay, ton for ton. Doubtless these results may have been affected more or less by the fact that enough protein-rich concentrates were fed to balance the ration even though no legumes had been fed. This probably resulted in the loss of the advantage of alfalfa hay in its richer protein content. However, when fed in rations which are low in protein, alfalfa has been found to be worth more per ton than clover hay of equal quality.

Live Stock Notes

Build the self-feeders so they will be ready for the spring crop of live stock, say farm engineering workers.

Make the sheep barn warm, to be in shape for the lambing season. A little extra care means lambs saved.

In the production of baby beef, the calves must be kept fat. Since calves grow more readily than they fatten, they must be fed more grain and less hay and forage than older steers. By feeding a mixture of grains they will eat more than if only one kind is fed.

One animal on the farm that we ought always to keep on the right side of the horse.

Alfalfa is not bad for horses, but fine for them, unless too much is fed. They will eat too much if given a chance, and they then incline to soften and sweat easily.

If you have never tried to keep a few sheep, just make the start. They are easy to take care of and return handsome profits. They also perform good service in eradicating weeds.

Dusty, moldy hay is dangerous to horses, sometimes causing heaves. Alfalfa and clover need to be watched for this.

As the ewe flock is fed depends the health of the coming lambs. No one can expect a poorly fed and cared-for ewe to produce a strong vital lamb that will grow into profit. Cornstalks, roots, silage and a small amount of grain will help get these ewes into good condition before lambing. Exercise and a dry shelter are other essentials.

ALABASTINE

Alabastine
—a dry powder in white and tints. Packed in 5-pound packages, ready for use by mixing with cold or warm water. Full directions on every package. Apply with an ordinary wall brush. Suitable for all interior surfaces—plaster, wall board, brick, cement, or canvas.

THE KITCHEN CABINET

If you were busy being right You'd find yourself too busy quite. To criticize your neighbor long Because he's busy doing wrong. —Rebecca Foreman.

SWEET BREADS

A few cupsful of raised dough saved from the bread-making may form a basis for many kinds of cakes and sweet breads. For a loaf that is easily made, take two cupsful of light raised bread dough; to this add one beaten egg, add one-half cupful of shortening, one-half cupful of sugar, spices to taste, with chopped fruits or nuts, or both. Cut in the shortening with the other ingredients, using two knives as in making pastry, then pour into a well-greased singel food pan and let rise, until light. Sprinkle with sugar mixed with cinnamon and bake in a moderate oven. Add flour as needed. This combination makes a good coffee cake if rolled out into an oblong loaf. Cover, sprinkle with sugar and cinnamon, and when light bake.

Raised Doughnuts.—To three cupsful of bread dough add one well-beaten egg, three-fourths of a cupful of sugar, four tablespoonsful of shortening, one teaspoonful of nutmeg or cinnamon. Cut in with two knives until well mixed; add flour to roll. Roll to one-fourth inch in thickness, cut in shapes and let rise well covered on the bread board until light. Fry in deep fat, hot enough to brown half-inch cubes of bread in one minute. For filled doughnuts, cut the cakes with a cookie cutter, place a spoonful of jam in the center, moisten the edges and fold over, pressing them well together. Let rise until light and fry as usual. Place two tablespoonsful of powdered sugar in a bag and dust them, one at a time, before serving.

Sponge Mixture.—Soak one yeast cake in one-half cupful of cold water; pour of the water and add one teaspoonful of sugar. Warm one and one-third cupful of milk, adding the yeast water after it is slightly cool, stir in one teaspoonful of salt and two cupsful of flour, with the softened yeast. Beat until thoroughly blended, then cover and let stand to rise in a warm place for several hours, until light and full of bubbles. Knead and mix it in is ready for the second rising, adding any desired fruit or sugar combination, depending upon the kind of bread to be made.

Eggless Gingerbread.—Warm together one-half cupful of brown sugar and one cupful of apple jelly with one-third of a cupful of shortening. Remove from the fire, add three-fourths of a cupful of sour milk, two and one-half cupsful of flour, sifted with one tablespoonful each of ginger and cocoa, one teaspoonful of cinnamon, one and one-half teaspoonsful of soda and one-half teaspoonful of salt. Mix and beat well until light, pour into a well greased tin and bake forty minutes.

Salads for the Children.

Many mothers have found difficulty in getting the children to eat all kinds of vegetables, and as we know, they are vitally important for the health of a child. It is necessary that every means should be used to start right habits.

Vegetables arranged attractively and well-seasoned with a good mayonnaise dressing, which may be prepared from olive or corn oil, will appeal to most children, and they will eat them with no protest.

Spinach which is so rich in iron when served as a vegetable or soup, becomes repellant to the child, but dressed with bits of bright vegetables, and a good salad dressing, goes without a murmur.

Such fruits as apples, oranges, and pineapples are well-liked by most children, while lettuce, cabbage, carrots, celery and other good vegetables, if dressed with a snappy well-seasoned salad dressing, will be eaten and enjoyed.

In making salad dressings for children and those who have a delicate digestion, lemon should be used instead of vinegar. The lemon juice is rich in vitamins which is lacking in vinegar.

Quick Mayonnaise Dressing.—Take one-half teaspoonful each of mustard, sugar, salt and paprika, add one egg yolk and one-half teaspoonful of lemon juice, beat well then add one tablespoonful of oil drop by drop, beating all the time, then add oil to make three-fourths of a cupful all together with two tablespoonsful of lemon juice added alternately.

Cabbage, Pineapple and Celery Salad.—Shred firm cabbage very fine, let stand in cold water to crisp. Drain, add a few tablespoonsful of pineapple and minced celery to each pint of cabbage. Dress with mayonnaise and serve.

Orange Salad.—Remove the pulp from two oranges, cutting them into halves and removing the pulp with a spoon. Arrange on lettuce and serve sprinkled with a teaspoonful of powdered sugar and a generous spoonful of mayonnaise.

A tablespoonful of molasses added to griddle cake batter will make the cakes brown nicely.

Nellie Maxwell

Cherish Happy Thoughts

That which we allow our minds to dwell upon determines largely our direction of progress as well as the character and extent of that progress. If you would be happy, turn away from your ill feelings to happy thoughts.—Clayton C. Cooper.

Love Compels Love

Love and you shall be loved. All love is mathematically just, as much as the two sides of an algebraic equation.—Emerson.

WOMEN FIGHT POWERFUL FOE

Struggle Against Ill Health

Find a Faithful Ally in Lydia E. Pinkham's Vegetable Compound

MRS. ADOLPH HANSEN HOLMQUIST, SOUTH DAKOTA

At the second bottle I began to feel better and I have used the Vegetable Compound ever since, whenever I feel badly. I recommend it and I will answer any letters asking about it.—Mrs. Adolph Hansen, Holmquist, South Dakota.

Could Work Only Two Hours
Encanto, Calif.—"I bless the day I began taking Lydia E. Pinkham's Vegetable Compound. I was so weak and tired all the time I could not work more than two hours each day, then had to go to bed for the rest of the day. I read so much about the Vegetable Compound and I was so weak that I decided to try it. I now do my own housework—washing, scrubbing, and ironing—and then help my husband with his garden. I do not have that worn-out feeling now. I advise every woman to give your wonderful medicine a trial, and I will answer any letters I receive from women asking about it.—Mrs. Stella Lay, 700 Jamaica Road, Encanto, Calif.

A woman who is fighting for her health and her family's happiness is a valiant soldier. She wages her battle in her own kitchen. She has no thrilling bugles to cheer her on, no waving banners.

If you are fighting this battle, let Lydia E. Pinkham's Vegetable Compound be your ally, too.

Not Alone
"Why so glum, Gertrude?"
"Well, I got married for fun."
"Well?"
"And now I am out of humor."—S. California Wampus.

Enough Said
"Why don't you like motoring with Bill Sparks, Maggie?"
"I ain't no laprobe, Mayme!"

Ain't That Nice!
Luke—Are you afraid of bugs?
Lucille—No; I feel perfectly safe with you.

CORNS

In one minute the pain is Gone!

Gets at the cause of corns

Dr. Scholl's Zino-pads work like magic, because they remove the cause—pressure or rubbing of shoes. The pads are instantly. Amateurs paring or burning with drops (acid) is dangerous—and doesn't stop the cause. Zino-pads are safe, sure, antiseptic, harmless. They protect while they heal. Get a box at your druggist's or shoe dealer's—30c.
